RESEARCH

WHO REALLY PLAYS INTERNET GAMES

The stereotype of internet games players as teenagers has been dashed by research from Nottingham University. In the first study of its kind, researchers found that almost half of those involved in role-playing or interactive games on the internet were aged 21-30, with a further fifth represented by 31 to 40 year olds.

Ages of Online Games Players

Age Group	Percentage
21 to 30	46%
10 to 20	25%
31 to 40	20%
41 Plus	9%

■ 21 to 30 □ 10 to 20 ■ 31 to 40 ■ 41 Plus

A quarter said that they played between 21 and 30 hours every week, while 15 per cent admitted giving more than 50 hours each week to their online hobby.

Net Access for All Investigated

According to a recent report the Disability Rights Commission (DRC) has begun the UK's first formal investigation into web accessibility for people with disabilities. The aim is to help the DRC develop clearer guidelines. The charity, Ability Net has stated that 90 per cent of sites pose access problems.

Even the Government is not immune – its own investigation in April last year estimated that 78 per cent of public sector websites – about 800 in total – failed to meet standards required by the Disability Discrimination Act (DDA) 1995.

This states that companies and organisations must make "reasonable efforts" to ensure that public services, and this includes web access, by those who have any variety of disabilities. Failure to comply could have some very serious repercussions.

Watch out for details of seminars on this topic in the near future. This is very important for all web designers.
