

Sample Teaching Plan  
Unit G622: Monitoring the Activity of the Human Body

**Suggested teaching time** Plan is based on 12 weeks at 5 hours per week (4 hours contact time + 1 hour directed study)

This unit is assessed by a 90 minute written paper.  
The learning activities are suggestions only. Teachers may wish to develop alternative strategies.

**Note:** The following two statements from Section 3.3.6 of the unit specification are likely to be addressed best in the context of work in sections 3.3.1 to 3.3.5 inclusive and section 3.3.7.

- Candidates need to be able to choose and evaluate relevant sources of data.
- Candidates need to be able to obtain and use primary and secondary data.

| Week number | Specification Unit Reference and Assessment Objectives   | Suggested Learning Activities  | Resources  |
|-------------|--|--|--|
| 1           | <p><b>3.3.2:</b> Structure and function of the circulatory and respiratory systems (introduction)</p> <ul style="list-style-type: none"> <li>• Describe the structure of the heart, the roles of the four chambers, the position and function of valves in double circulation, and the characteristic features of arteries, veins and capillaries.</li> <li>• Explain how heart rate is affected by nervous and hormonal inputs.</li> <li>• Explain how blood pressure changes with the activity of the body, and the effect of carbon dioxide levels in the blood.</li> </ul> | <ul style="list-style-type: none"> <li>• Teacher-led instruction.</li> <li>• Simple 'jogging on the spot followed by rest period' demonstration to indicate nervous effect on heart rate (pulse rate).</li> <li>• Candidate research.</li> </ul> | <p>Teacher-generated 'Need to know' sheet, which should include the principles, facts etc. likely to be assessed based on the specification references.</p> <p>Worksheets for candidate tasks.</p> <p><i>Worksheet A:</i><br/>Monitoring cardiovascular performance.</p> |

| <b>Week number</b> | <b>Specification Unit Reference and Assessment Objectives</b>  | <b>Suggested Learning Activities</b>  | <b>Resources</b>  |
|--------------------|--|---|---|
| 2                  | <p><b>3.3.2</b> Structure and function of the circulatory and respiratory systems</p> <ul style="list-style-type: none"> <li>• Describe the structure of the lungs, trachea and bronchial tubes, and how ventilation is brought about by muscles.</li> <li>• Explain how gases are exchanged between the atmosphere and the blood through the respiratory surfaces of the lungs.</li> <li>• Explain how oxygen and nutrients reach the cells within tissues, and how carbon dioxide is removed from the cells and from the bloodstream.</li> </ul> | <ul style="list-style-type: none"> <li>• Teacher-led instruction, including use of PowerPoint images to show healthy and damaged alveoli and a simple model of gaseous exchange at the lungs.</li> <li>• Candidate research.</li> </ul> | Teacher-generated 'Need to know' sheet, worksheets for candidate tasks. |

| Week number | Specification Unit Reference and Assessment Objectives  | Suggested Learning Activities   | Resources  |
|-------------|---|---|--|
| 3           | <p><b>3.3.1:</b> Respiration in energy terms</p> <ul style="list-style-type: none"> <li>• Compare cellular respiration to the burning of fuels.</li> <li>• Describe how the circulatory and respiratory systems both play a part in the process of respiration.</li> <li>• Outline why humans need to respire, with reference to muscle cell contraction, nerve impulse transmission, active transport and metabolic reactions.</li> <li>• State that ATP provides the immediate source of energy for biological processes.</li> <li>• State the differences between aerobic and anaerobic respiration in terms of their location within cells, substrates, products and quantity of energy made available to a respiring cell.</li> <li>• Relate cellular respiration to what happens in a muscle cell during various levels of physical activity.</li> <li>• Explain how monitoring a person's circulatory and respiratory systems and analysing their blood provides information about a person's state of health or fitness.</li> </ul> | <ul style="list-style-type: none"> <li>• Teacher-led instruction, including a simple model of combustion using fossil fuels.</li> <li>• Candidate research, including the link between health/fitness levels and monitoring circulatory and respiratory performance.</li> </ul> | <p>Teacher-generated 'Need to know' sheet, worksheets for candidate tasks.</p> |

| Week number | Specification Unit Reference and Assessment Objectives   | Suggested Learning Activities   | Resources  |
|-------------|--|---|--|
| 4           | <p><b>3.3.3:</b> Uses of physiological measurement</p> <ul style="list-style-type: none"> <li>• Explain why you need to know the average values and ranges for physiological indicators that are regarded as 'normal' for male and female adults at rest.</li> <li>• State the typical blood plasma concentration and the conditions related to the appearance of glucose in urine.</li> <li>• State the values or ranges relating to breathing, blood pressure and body temperature.</li> <li>• Explain how to measure body temperature accurately.</li> <li>• Use graphs to monitor changes in temperature.</li> <li>• Recognise the normal body temperature for an average adult at rest, the range that a healthy body can withstand in the context of hypothermia and hyperthermia, and body temperatures that are dangerously high or low due to medical conditions.</li> <li>• Describe the mechanisms available to the body to maintain a stable body temperature including shivering, sweating, vasoconstriction and vasodilation.</li> </ul> | <ul style="list-style-type: none"> <li>• Teacher-led instruction, providing a summary table of values/ranges for normal blood plasma glucose concentration, breathing, blood pressure and body temperature (including hyperthermia/heat exhaustion/heatstroke).</li> <li>• Candidate research – visit a fitness clinic and/or hospital unit and observe the recording of physiological measurements.</li> <li>• Candidate research, including the use of clinical thermometers (mercury and electronic/digital).</li> </ul> | <p>Teacher-generated: 'Need to know' sheets for each section and worksheets for candidate tasks.</p> |
