The Assessment and Qualifications Alliance (AQA) is a company limited by guarantee registered in England and Wales (company number 3644723) and a registered charity (registered charity number 1073334). Registered address: AQA, Devas Street, Manchester M15 6EX

GCE Art and Design – General (for information specific to Art, Craft and Design see page 6)

General

Each of the four units made different demands on students and required the development of a wide range of skills and knowledge of the subject appropriate to work at this level. These different demands were intended to lead to courses of study in which students had opportunities to develop as confident artists, designers, craftspeople and photographers, producing work of substance and depth. Many students rose to this challenge.

Written work

In most units students included written notes and annotations. These often complemented visual aspects of the work. In the most successful cases these notes gave useful insights into students' knowledge and understanding of their own work and that of others. In many cases students were able to reflect on their progress through particular projects. For some, this simply became a list of 'I did this, then I did that'; for others it added another dimension by providing opportunities for reflection and analysis.

Contextual materials

Students continued to make reference to a wide range of artists, designers and craftspeople from different historical periods. Contemporary examples were popular. In many cases they generated interesting and occasionally, innovative work, but for some students making a constructive response proved to be problematic. A common problem was a lack of understanding of artists' ideas and work. This sometimes resulted in work that was simplistic, banal and crude.

It should be noted that the development of students' own practice is central to this examination. They should be encouraged to make *a personal, informed and meaningful response demonstrating critical understanding*. This statement, in AO4, relates to the students' own work and that of others.

There was also a continuing problem, particularly in photography, of students accessing and producing material that was inappropriate in a school or college context. Teachers and lecturers are reminded of their obligation to monitor materials accessed and produced by students. AQA cannot condone the use of materials that might contravene current child protection policies.

In Unit 3 students were encouraged to access work in galleries, museums and through visits to artists', designers' and photographers' studios. This, for many, proved to be a most fruitful experience with many positive responses seen by moderators. Occasionally, students were disappointed when work in galleries failed to match up to the glossy post card images with which they were familiar. However, this in itself was a learning experience as an appreciation of scale and the physical nature of materials can have a significant impact on the work. Centres are reminded that, where appropriate, students should submit a bibliography and list of galleries and websites visited.

The development of skills

The development of practical skills has been a major concern in the examination. In the most successful work students were clearly able to manage processes and techniques successfully. They demonstrated awareness of the potential and limitations of particular materials and used them to successfully research and develop their ideas. Unfortunately, a number of students failed to develop their basic

skills in the early part of the course and this hampered their progress later. This was a particular problem in some photography courses, where centres had failed to recognise the level of competence and depth of understanding required to achieve A-level standard.

The requirement, in all endorsements except Photography, for students to *explore drawing using a variety of methods and media*, failed to be addressed in a number of centres. It goes without saying that confidence and competence in drawing is a common factor in the most successful work.

ICT

Students across all endorsements have used some aspect of ICT. The majority have access to digital cameras and camera phones which were widely used as a research tool. A number of students produced digital sketchbooks.

Most students used the Internet, although this was a mixed blessing, as outside the school and college environment it is largely unregulated. Downloaded images were often of a poor quality and responses often seemed somewhat superficial. However, some sites offered students direct contact with artists and gallery sites, enabling them to keep informed about current exhibitions.

In some subjects, such as Graphic Communication, the use of ICT was a central part of practice. This resulted in a number of students creating highly polished professional looking images. In others, ICT was used less convincingly and masked a lack of understanding and skill. Some Textile students used ICT to develop ideas and try out different colours. Although the photography endorsement encompassed film and video, developments generally seemed to be fairly limited. Film and video were often included and often were used as an additional element in particular projects.

Accessing on-screen images was a problem for moderators who often wasted valuable time looking at blank screens and waiting for technical support. Whenever possible, hard copies of images in the requested sample should be provided by centres to help avoid such problems.

Selection, organisation and presentation of work

Access to work at teacher standardisation meetings clearly had a positive impact on practice. This was particularly noticeable in portfolios which were better organised and generally easier to 'read'. Many candidates were able to make effective visual links with different aspects of the work to give clear evidence of addressing the assessment objectives. This was particularly noticeable in AO1 where development is a central consideration. Links between students' work and that of other artists, designers, craftspeople and photographers were often also clearly made through the careful positioning of images on mounted sheets and in students' exhibitions.

Annotations formed a part of most students' work and often helped make clear to the moderator their intentions and shed light on the students' knowledge, understanding and achievements. In Personal Investigations good, clear writing and well-presented work was a major consideration. Effective and informative annotations were widely seen in carefully prepared photography workbooks.

Poor quality labelling continued to be a problem, in some submissions. Carefully prepared mounted sheets were often spoilt by crude lettering, often clumsily made using a large felt tip pen.

Administration

Moderators reported some improvements in administration this year with centres becoming more familiar with AQA procedures and making samples more accessible to moderators. However, there was concern about the lack of organisation in some centres. The late posting of centre marks, the poor organisation of samples and a lack of space for marking work were all issues in some centres. Thoughtful comments on Candidate Record Forms were welcomed and often provided useful insights into the work.

Marking

Marking was generally more accurate this year although it continued to be a problem in a number of centres. Many teachers and lecturers continued to mark too generously in the higher mark bands, often failing to recognise that a mark of 80 should only be awarded to the most exceptional work. Teacher standardisation meetings were well received and valued. Having opportunities to discuss live work with colleagues and examiners had a positive impact on marking and helped to link the different statements in the marking criteria with visual examples. Although there are limits on the number of teachers attending each meeting all teachers should have access to the visual standards posted on the AQA website. Advice and guidance is also available from Coursework Advisers.

The standardisation of markers in centres continued to be a significant problem with clear differences emerging across different endorsements.

Externally Set Assignments

Question papers for both AS and A2 appeared to be welcomed by most centres with many teachers and lecturers commenting on the richness of contextual sources and the opportunities provided for imaginative responses. Some of the most successful work seen was in response to externally set assignments.

The structure of the AS externally set assignment with the requirement for a period of supervised time for developmental work appeared to present few problems for centres. Many successful outcomes were seen with the majority of students choosing to produce finished work.

The A2 externally set assignment which offers a longer period for preparation seems to have been welcomed by centres. Many students produced their most successful work for this unit. In the most successful work students established a clear link between their initial intentions and the final outcomes. There were many examples of highly competent work across all endorsements.

A01

The ability to develop ideas from the initial starting point to the final outcome in a sustained and informed manner was a significant feature in the more accomplished work. Essential to this process was the ability to use materials and techniques effectively. Contextual sources, when used well, informed the work. In less successful work little real connection was made and the work appeared fragmented. Analytical skills were evident in the way that students were able to use aspects of the work of others in their own work. Analysis was also evident in written comments and observations.

A02

In many of the more successful courses students were taught a number of techniques related to their chosen endorsement. They learnt about the nature of materials, their potential and limitations. They also had opportunities to experiment

with media and approaches. This basic grounding, often in the first part of a course, gave students the confidence to review and refine their ideas as their work developed. For other students these skills were never learnt. They had interesting ideas but were unable to fulfil their intentions and achieve a reasonable outcome.

AO3

This AO was well managed by many students who gathered a range of materials related to issues, ideas and themes in a variety of ways. Drawings and colour studies, using a variety of media were popular. Some studies were closely observed; others were looser and more gestural and impressionistic. Much of this work was contained in sketchbooks and workbooks. Some studies were large scale; others were far smaller and contained considerable detail. Written materials were also used alongside drawings and photographs. In the most successful examples recording was focused and relevant to intentions and there was clear evidence of reflection on the decisions made related to different aspects of the work.

Art, Craft and Design

A2 Externally Set Assignment

This was usually well managed, as centres were familiar with an initial period set aside for preparation, followed by a timed period of 15 hours. The additional preparation time meant that more able students produced substantial in-depth work. Most students made good use of the artists, designers and craftspeople referred to in the question papers; others looked further afield. In the work of the more successful students there was clear evidence of learning from the work of others whilst developing a personal response. In less successful work few genuine connections were made.

Many students made a genuine effort to incorporate their experiences from the AS course into this unit, and sketchbooks or mounted sheets of studies, samples and photographs were used effectively to present the development towards a final personal response.

Responses to questions

Everyday Objects

Students responded in a variety of ways to this starting point. Work usually commenced with recording from familiar subjects, using traditional drawing techniques and digital photography which was used with varying degrees of skill and effectiveness. The more able students made very good use of ideas about scale, macro viewpoints and surreal juxtapositions. Less able students tended not to develop their work from rather obvious versions of Pop Art or Surrealist imagery.

Clowns

This question prompted a range of responses with many students exploring the sinister aspects of the subject, or dressing up friends and family in order to create thought-provoking imagery. Less successful submissions tended to rely on secondary source images from sources such as horror movies or web sites, which were then not further developed. Some strong expressive units were seen, prompted by the work of Georges Rouault and Picasso. The wider context of circuses and aspects of mime and movement also provided some useful material.

Unexpected Perspectives

Cubism and MC Escher were used for effective research into altered perspectives on architectural forms. Jan Dibbets and Anthony Green also prompted some

technically accomplished responses. Other students interpreted this as unexpected perspectives on aspects of life. Less successful submissions tended to be very derivative.

Design & Art

This question had a broad appeal to students, offering opportunities to explore all areas of study and a range of media. Some students looked at product design and transport, whilst others took the suggested designers and constructed their approach around examples of their work. Responses to Mondrian often resulted in work which lacked understanding. Some students made good use of examples of fashion design and iconic paintings.

The Space Age

Some responses were heavily reliant on comic books and film imagery; others were inspired by the large-scale sculptures of Ron Mueck. The work of HR Giger and André Courrèges was also used by students to develop their own work in a variety of styles and materials. Media imagery from the late 20th century also gave rise to some mixed media responses.

Images of Conflict

In response to this question students explored images of urban, political and social conflict. Banksy, McCulloch, Rauschenberg and contemporary reportage contributed to the development of painting, graphics, print making and mixed-media outcomes. Some students used images of both uniforms and broadcast news in a relatively superficial way, whilst some strong responses explored context, location and experience.

Seascapes

Responses to the question ranged from large-scale paintings and three-dimensional sea creatures to photographs and watercolours. The power of the waves was the focus for some students, whilst others focused on the decorative and intricate patterns of organic and geological structures found close to the shore. Where photography was a central means of recording, the less successful images led to only modest final outcomes whereas well-composed and well-thought out photos supported some strong painting and mixed media final pieces.

Egyptian Art

A total reliance on secondary-source imagery, in a number of cases, led to some weak responses. Where students had visited collections and recorded from direct experience the outcomes were invariably more convincing. The influence of Egyptian stylisation resulted in a range of responses which included installations, painted panels, jewellery and fashion items. Less successful work included attempts to re-design hieroglyphs and reproductions of relief panels and Egyptian artefacts.

Mark Ranges and Award of Grades

Grade boundaries and cumulative percentage grades are available on the [Results statistics](#) page of the AQA Website.
