

**OXFORD CAMBRIDGE AND RSA EXAMINATIONS  
AS LEVEL**

**H046/01**

**COMPUTER SCIENCE**

**Computing Principles**

**MONDAY 6 JUNE 2016: Morning**

**TIME ALLOWED: 1 hour 15 minutes  
plus your additional time allowance**

**MODIFIED ENLARGED**

<b>First Name</b>		<b>Last Name</b>	
-----------------------	--	----------------------	--

<b>Centre number</b>						<b>Candidate number</b>				
--------------------------	--	--	--	--	--	-----------------------------	--	--	--	--

**DO NOT USE:  
A calculator**

**OCR SUPPLIED MATERIALS:  
Insert for Question 7.**

**READ INSTRUCTIONS OVERLEAF**

## **INSTRUCTIONS**

**Use black ink.**

**Complete the boxes on the first page with your name, centre number and candidate number.**

**Answer ALL the questions.**

**Write your answer to each question in the space provided.**

**If additional space is required, use the lined page(s) at the end of this booklet. The question number(s) must be clearly shown.**

## **INFORMATION**

**The total mark for this paper is 70.**

**The marks for each question are shown in brackets [ ].**

**Quality of extended responses will be assessed in questions marked with an asterisk (\*).**

**BLANK PAGE**

**Answer ALL the questions**

- 1 See And Believe is a company that specialises in computer-generated imagery (CGI) for films.**

**Producing CGI requires lots of processing power and so the company has a large number of high-performance computers.**

- (a) Explain why See And Believe would use a distributed operating system.**

---

---

---

---

---

---

---

---

**[3]**

**(b) The processors in the company's powerful computers have fast clock speeds and large amounts of cache memory. Describe how each of these improves the processor's performance:**

**(i) fast clock speed**

---

---

---

---

---

**[2]**

**(ii) large cache memory**

---

---

---

---

---

**[2]**

---

---

---

---

---

---

---

**(c) Elegant Bags prides itself on its ethical reputation.**

**(i) State ONE ethical issue the company may have considered when designing its website.**

---

---

**[1]**

**(ii) State ONE action the company could take to address the ethical issue identified in part (i).**

---

---

**[1]**

**BLANK PAGE**

**3 A burglar alarm runs on a processor with the Little Man Computer (LMC) instruction set.**

**One of the instructions in the set is Branch if Positive (BRP).**

**(a) Describe what the instruction BRP does.**

---

---

---

**[2]**

**4 A programmer spends her spare time contributing to an open source application that converts video files from a range of formats to one which uses lossy compression.**

**(a) Describe what is meant by the term ‘open source software’.**

---

---

---

**[2]**

**(b) Describe what is meant by the term ‘lossy compression’.**

---

---

---

**[2]**

**When a video is selected, the program gives an estimate of the file size of the converted video. The estimate in kilobytes is calculated by multiplying:**

**the number of pixels in the video's resolution by...**

**the number of frames per second by...**

**the length of the video in minutes by...**

**the value 0.0013.**

**(c) Write a function in pseudocode that estimates the size of a converted video.**

**It should:**

**take in 3 parameters: `pixels`, `framesPerSec`,  
`lengthMins`**

**calculate the estimated file size**

**return a string with the file size, including units**

**use megabytes for sizes under 1000 megabytes,  
otherwise the estimate should be given in  
gigabytes.**

---

---

---

The coding team are looking at writing a new closed source version of the application that converts audio and image files in addition to video. They intend to sell copies of the program when it is complete. They investigate three programming languages they could use, including:

**C++**, which is compiled to machine code

**Java**, which compiles to an intermediate code that then runs off a virtual machine

**JavaScript**, which runs from an interpreter in a web browser.

**(d)\* Discuss the benefits and drawbacks of the three options above and justify which option you would recommend. [9]**

---

---

---

---

---

---

---

---

---

---

**5 (a) Give the number 55 in binary as an 8-bit unsigned integer.**

---

---

---

---

**[2]**

**(b) Represent the number 55 in normalised floating point binary notation, using 8 bits for the mantissa followed by 8 bits for the exponent, both in two's complement binary.**

---

---

---

---

**[2]**

**(c) Represent the number 55 in normalised floating point binary notation, with the mantissa and exponent both in two's complement binary, using as few bits as possible.**

---

---

---

---

**[2]**

**(d) State why a programmer might choose to declare a variable as a floating point number.**

---

---

---

---

**[1]**

**6 An insurance company's offices have a large number of black and white printers.**

**The company's technicians keep accurate records of the printers in the building, and the quantity of toner cartridges in stock, in a flat file database. An extract of the database is shown in Fig. 1 on the opposite page.**

**(a) Describe TWO issues, referring to Fig. 1, that might arise from using a flat file database structure.**

**1** \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

**2** \_\_\_\_\_

\_\_\_\_\_

**Fig. 1**

<b>PRINTER MODEL</b>	<b>LOCATION</b>	<b>NOTES</b>	<b>CARTRIDGE CODE</b>	<b>QUANTITY IN STOCK</b>	<b>RE-ORDER URL</b>
<b>LasPrint LP753</b>	<b>office 3</b>		<b>LP-7XB</b>	<b>12</b>	<b>www.megacheapprint.com/toner/LP-7XB</b>
<b>LasPrint LP710</b>	<b>office 6</b>	<b>drum replaced</b>	<b>LP-7XB</b>	<b>12</b>	<b>www.megacheapprint.com/toner/LP-7XB</b>
<b>Zodiac ZN217</b>	<b>reception</b>		<b>Zod17</b>	<b>4</b>	<b>www.zodioclaser printing.com/shop/Z17</b>
<b>Zodiac ZN217</b>	<b>conference Room 2</b>	<b>had to add RAM</b>	<b>Zod17</b>	<b>4</b>	<b>www.megacheapprint.com/toner/LP-7XB</b>
<b>LasPrint LP753</b>	<b>office 8</b>		<b>LP-7XB</b>	<b>12</b>	<b>www.megacheapprint.com/toner/LP-7XB</b>

**A relational database is created with three tables:**

**PrinterModel: this stores all the data about each model of printer**

**PrinterInstance: this stores the data about each individual printer in the building**

**Cartridge: this stores information about the toner cartridges.**

**(b) Draw an entity-relationship diagram to show the relationships between the three tables.**

**[4]**

**Most of the printers have their own on-board RAM.**

**(c) State what the printers' RAM is used for.**

---

---

---

**[1]**

- 7 A DIY store has an offer: ‘Spend £20 or more on decorating products and get 10% off all gardening products.’

When items are scanned in at the checkout they are stored in a 2-dimensional array called `purchases`, which stores the item name, category and price.

A receipt with the appropriate discounts deducted is then produced.

Examples of the array and corresponding receipt are shown in Fig. 2 and Fig. 3 on the Insert.

Write an algorithm in pseudocode, using the array `purchases`, to:

determine which items are given a discount

calculate the total price to pay

present this information on a receipt in the format shown in Fig. 3.
