Unit **H046/02**: Algorithms and problem solving

Advanced Subsidiary GCE

Mark Scheme for June 2016

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Annotations

| Annotation | Meaning |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | Omission mark |
|  | Benefit of the doubt |
|  | Incorrect point |
|  | Follow through |
|  | Not answered question |
|  | No benefit of doubt given |
|  | Repeat |
|  | Correct point |
|  | Too vague |
|  | Blank Page – this annotation must be used on all blank pages within an answer booklet (structured or unstructured) and on each page of an additional object where there is no candidate response. |
|  | Level 1 |
|  | Level 2 |
|  | Level 3 |

|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| 1 | <ul style="list-style-type: none"> • Selection/Branching (1) (AO1.1) • Working selection example (1) (AO1.2) e.g. <pre>if a>b then c=b+42 endif</pre> • Iteration (1) (AO1.1) • Working iteration example (1) (AO1.2) e.g. <pre>for count=1 to 10 print(count) next count</pre> • Sequence (1) (AO1.1) • Working Sequence example (1) (AO1.2) e.g. <pre>qty = input() total = qty * price</pre> | <p style="text-align: center;">6</p> <p>AO1.1 (3)</p> <p>AO1.2 (3)</p> | <p>Max 6 marks</p> <p>Do not penalise pseudocode if it does not conform to the specification pseudocode guidelines.</p> |

| Question | Answer/Indicative content | Mark | Guidance |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | <p>Mark Band 3–High Level (7-9 marks) The candidate demonstrates thorough knowledge and understanding of reasons for the use of local and global variables and naming conventions; the material is generally accurate and detailed. The candidate is able to apply their knowledge and understanding directly and consistently to the context provided. Evidence/examples will be explicitly relevant to the explanation. The candidate provides a thorough discussion which is well-balanced (local/global and naming conventions). Evaluative comments are consistently relevant and well-considered. <i>There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</i></p> <p>Mark Band 2-Mid Level (4-6 marks) The candidate demonstrates reasonable knowledge and understanding of reasons for the use of local and global variables and naming conventions; the material is generally accurate but at times underdeveloped. The candidate is able to apply their knowledge and understanding directly to the context provided although one or two opportunities are missed. Evidence/examples are for the most part implicitly relevant to the explanation. The candidate provides a reasonable discussion, the majority of which is focused. Evaluative comments are for the most part appropriate, although one or two opportunities for development are missed.</p> | <p>9* AO1.1 (2) AO1.2 (2) AO2.1 (2) AO3.3 (3)</p> | <p>AO1: Knowledge and Understanding The following is indicative of possible factors/evidence that candidates may refer to but is not prescriptive or exhaustive:</p> <ul style="list-style-type: none"> • Scope of global and local variables. Where declaration of global and local variables take place. • Duplication of variable name in separate functions • Variable identifiers must conform to a standard convention (meaningful name, camel back, data type indication, indicates global or local): this helps others to understand the code and reduces the likelihood of duplication, makes maintenance easier. • By convention UPPERCASE is reserved for constants rather than variables. • Programming languages have rules for names variables can have. Usually they can only contain letters, numbers and underscores and may not start with a number. Variable names cannot be reserved words (<i>if, while, for</i> etc). • Global variables make it difficult to integrate modules, they increase complexity of a program, they may cause conflicts with names written by others/in other modules, and they may be changed inadvertently when program is complex. • Local variables help to make each function reusable. |

| Question | Answer/Indicative content | Mark | Guidance |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | <p><i>There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence.</i></p> <p>Mark Band 1-Low Level (1-3 marks) The candidate demonstrates a basic knowledge of reasons for the use of local and global variables and naming conventions, with limited understanding shown; the material is basic and contains some inaccuracies. The candidate makes a limited attempt to apply acquired knowledge and understanding to the context provided. The candidate provides a limited discussion which is narrow in focus. Judgments if made are weak and unsubstantiated. <i>The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</i></p> <p>0 marks No attempt to answer the question or response is not worthy of credit.</p> | | <p>AO2.1: Application The selected knowledge/examples should be directly related to the specific question. The following is indicative of possible factors/evidence that candidates may refer to but is not prescriptive or exhaustive:</p> <ul style="list-style-type: none"> • Explanation of how the standard rules for programming would impact upon the choices made for using variables and how they are addressed. • Discussion of how breaking the rules of variable naming results in syntax error, causing it not to compile. • Discussion around the use of different variables that are dependent, independent or interdependent. <p>AO3.3: Evaluation Candidates will need to consider a variety of viewpoints in relation to following standard rules for functions and variables while developing management software and will make evaluative comments about the issues and solutions they are discussing e.g.</p> <ul style="list-style-type: none"> • Why when using global variables complexity of program increase? • Why meaningful variable names and camel back are needed? • Why indication of data type and whether local or global • Why local variables allow functions to be reusable? • Why variable rules are important so the tokeniser can recognise variables in lexical analysis. • Why ignoring rules of naming variables can result in unexpected behaviour (e.g. if a language is case sensitive <code>netPrice</code> is different to <code>netprice</code>) |
