

## **Mark Scheme (Results)**

Summer 2018

Pearson Edexcel International  
Advanced Subsidiary

Geography (WGE02)

Unit 2: Geographical Investigations

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

### Placing a mark within a level mark band

- The instructions below tell you how to reward responses within a level. Follow these unless there is an instruction given within a level. However, where a level has specific guidance about how to place an answer within a level, **always** follow that guidance.
- **2 mark bands**  
Start with the presumption that the mark will be the higher of the two.  
An answer which is poorly supported gets the lower mark.
- **3 mark bands**  
Start with a presumption that the mark will be the middle of the three.  
An answer which is poorly supported gets the lower mark.  
An answer which is well supported gets the higher mark.
- **4 mark bands**  
Start with a presumption that the mark will be the upper middle mark of the four.  
An answer which is poorly supported gets a lower mark.  
An answer which is well supported and shows depth or breadth of coverage gets the higher mark.

- Mark schemes will indicate within the table where, and which strands of QWC, are being assessed. The strands are as follows:

*i) ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear*

*ii) select and use a form and style of writing appropriate to purpose and to complex subject matter*

*iii) organise information clearly and coherently, using specialist vocabulary when appropriate.*

Question Number	Answer	Reject	Mark
<b>1(a)(i)</b>	<p style="text-align: center;"><b>AO2 (2 marks)</b></p> <p>A = Sea wall, revetment, recurved wall.            B = Rip rap, riprap, rip-rap, rock armour.            NB: Answers must link correctly to A and B specifically. Mark answer correct even if it follows an incorrect one on the same line.</p>	<p>A = "gabions"            B = "rocks"            "rubble"            "boulders"</p>	<b>2</b>

Question Number	Answer	Mark
<b>1(a)(ii)</b>	<p style="text-align: center;"><b>AO1 (2 marks)</b></p> <p>Award <b>1</b> mark for explaining a coastal management decision and a further <b>1</b> expansion mark for explaining how that may lead to a conflict / explaining conflict between two or more groups.</p> <ul style="list-style-type: none"> <li>• A policy of no protection (e.g. managed retreat) because of low land value (1) could upset local land owners and / or householders in locations at risk (1).</li> <li>• A policy of soft engineering may be seen as not offering sufficient protection in comparison with hard engineering (1) to some players / people with high value property. (1)</li> <li>• Environmental groups may see hard engineering approaches as unsustainable (1) and potentially damaging or degrading the local coastal ecosystem (1).</li> </ul> <p>Accept other valid explanations.</p>	<b>2</b>

Question Number	Indicative content
<b>1(b)</b>	<p style="text-align: center;"><b>AO1 (6 marks) AO2 (2 marks)</b></p> <p><b>Marking instructions</b>            Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b>            The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• Bedrock hardness / resistance is a control over recession rates, harder rocks have greater resistance to both erosion and weathering processes.</li> <li>• Bedrock structure and jointing: highly fractured rock is less resistant to erosion; faults provide a weakness increasing recession rates; concordant versus discordant structure affecting rates of erosion.</li> <li>• Other factors are relevant such as coastal management options, e.g. hold-the-line vs managed retreat will directly control local coastal recession rates.</li> </ul>

	<ul style="list-style-type: none"> <li>• The degree of coastal exposure, e.g. to wind, as well as aspect, fetch and wave type.</li> <li>• Sea level change (long and short term) can influence coastal recession by altering wave and tidal action.</li> <li>• Nature of the coast, e.g. balance of high energy (e.g. beaches) to low energy (e.g. salt-marshes) will affect coastal recession and relief.</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• The density and direction of rock jointing is a profound control on both weathering and erosion rates.</li> <li>• The balance of erosion to subaerial processes will be controlled by a complex combination of factors such as land-use and climate as well as geology, wave type etc. In some locations, these controls will be very significant.</li> <li>• For most coastlines, waves are the main source of energy for geomorphic processes so might be seen as the most significant factor.</li> <li>• Rates of recession will vary significantly in time and space, even on a short stretch of coastline where rock types and structure can vary over short distances.</li> <li>• Other factors, e.g. choice of coastal management might be significant for some coastline and areas.</li> </ul> <p>NB Answers only considering lithology or structure are likely to be maximum Level 2.</p>	
Level	Mark	Descriptor
Level 0	0	No acceptable response.
Level 1	1-3	<ul style="list-style-type: none"> <li>• Demonstrates isolated elements of geographical knowledge and understanding, some of which may be inaccurate. (AO1)</li> <li>• Understanding addresses a narrow range of geographical ideas. (AO1)</li> <li>• Understanding of geographical ideas lacks detail. (AO1)</li> <li>• Applies knowledge and understanding to geographical information/ideas, with limited logical connections/relationships. (AO2)</li> </ul>
Level 2	4-6	<ul style="list-style-type: none"> <li>• Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. (AO1)</li> <li>• Understanding addresses a range of geographical ideas. (AO1)</li> <li>• Understanding of geographical ideas is not fully detailed and/or developed. (AO1)</li> <li>• Applies knowledge and understanding to geographical information/ideas logically to find some relevant connections/relationships. (AO2)</li> </ul>
Level 3	7-8	<ul style="list-style-type: none"> <li>• Demonstrates accurate and relevant geographical knowledge and understanding throughout. (AO1)</li> <li>• Understanding addresses a broad range of geographical ideas. (AO1)</li> </ul>

		<ul style="list-style-type: none"> <li>Understanding of the geographical ideas is detailed and fully developed. (AO1)</li> <li>Applies knowledge and understanding to geographical information/ideas logically to find fully relevant connections/relationships. (AO2)</li> </ul>
--	--	---

Question Number	Answer	Mark
<b>2(a)(i)</b>	<p style="text-align: center;"><b>AO2 (2 marks)</b></p> <p>Award <b>1</b> mark for each trend i.e. change over time. Maximum <b>2</b> marks.</p> <ul style="list-style-type: none"> <li>Overall an increase in the house price index 1970 – 2015 for both countries (1).</li> <li>UK has the steeper upward trend overall, reaching 500 in 2015 (1).</li> <li>Canada has seen the slower / more gradual rate of index increase (1).</li> <li>All house prices changes show marked fluctuations e.g. 2007/8 and 2015 (1).</li> <li>Some evidence of cycles / peaks / spikes every 15-20 years for UK (1).</li> </ul> <p>Accept other overall trends in the data. Reject single data points i.e. no change over time. Data not required.</p>	<b>2</b>

Question Number	Answer	Mark
<b>2(a)(ii)</b>	<p style="text-align: center;"><b>AO1 (2 marks)</b></p> <p>Award <b>1</b> mark for explaining a strategy / example and a further expansion mark that explains how ecological footprints are reduced, up to a maximum of <b>2</b> marks.</p> <ul style="list-style-type: none"> <li>Cities e.g. Masdar, Abu Dhabi, are planned to operate on renewable electricity / energy which means that it will try to be carbon-zero (1) with lower pollution / carbon emissions from energy consumption (1).</li> <li>City plans e.g. Tainjin, China have an emphasis on green transport, e.g. walking and bicycles (1) this has reduced diesel / petrol energy consumption from transport (1).</li> <li>Large expanses of protected greenspace / parks (1) which sequester carbon and reduce per capita CO2 emissions (1).</li> </ul> <p>Credit other valid examples and ideas, either planned or already developed. Note: named eco-city not required for the marks.</p>	<b>2</b>

Question Number	Indicative content	
<b>2(b)</b>	<b>AO1 (6 marks) AO2 (2 marks)</b>	
	<p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• Large-scale urban regeneration infrastructure projects can be developed for different purposes and have a range of different design briefs.</li> <li>• Example of large-scale infrastructure includes sporting events, expos and tourism development as tools for regeneration.</li> <li>• Large-scale projects are often used as a catalyst for additional development and improvement. Often they are large cost and often part funded by the state, which carries a risk in the shorter and longer term.</li> <li>• Sustainability may be an important aspect of some large-scale projects. It includes social, economic, political as well as environmental considerations, but there is much overlap between the ideas so often they cannot be considered as discrete.</li> <li>• Urban regeneration can also be achieved at a smaller scale, using community based and localised schemes.</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• Infrastructure projects are often focused around economic improvements, rather than environmental or social returns since some schemes are privately funded and shareholders want a return. Therefore, success is mixed depending on who is considering the measure.</li> <li>• Criteria for 'success' include jobs, new housing, environmental improvements, improvements in services – but these may benefit some people more than others (newcomers versus existing residents).</li> <li>• Regeneration through infrastructure may not benefit all individuals and groups within an area, so the "success" aspect can be met with mixed response depending on stakeholders and individuals.</li> <li>• Smaller-scale regeneration projects focus on improving communities (housing, education and skills, employment opportunities) and increasing local representation. Such projects with more of a social focus are often significant tools in urban improvement. They may be more successful in some instances.</li> </ul>	
Level	Mark	Descriptor
Level 0	0	No acceptable response.
Level 1	1–3	<ul style="list-style-type: none"> <li>• Demonstrates isolated elements of geographical knowledge and understanding, some of which may be inaccurate. (AO1)</li> <li>• Understanding addresses a narrow range of geographical ideas. (AO1)</li> <li>• Understanding of geographical ideas lacks detail. (AO1)</li> </ul>

		<ul style="list-style-type: none"> <li>Applies knowledge and understanding to geographical information/ideas, with limited logical connections/relationships. (AO2)</li> </ul>
Level 2	4-6	<p>Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. (AO1)</p> <ul style="list-style-type: none"> <li>Understanding addresses a range of geographical ideas. (AO1)</li> <li>Understanding of geographical ideas is not fully detailed and/or developed. (AO1)</li> <li>Applies knowledge and understanding to geographical information/ideas logically to find some relevant connections/relationships. (AO2)</li> </ul>
Level 3	7-8	<ul style="list-style-type: none"> <li>Demonstrates accurate and relevant geographical knowledge and understanding throughout. (AO1)</li> <li>Understanding addresses a broad range of geographical ideas. (AO1)</li> <li>Understanding of the geographical ideas is detailed and fully developed. (AO1)</li> <li>Applies knowledge and understanding to geographical information/ideas logically to find fully relevant connections/relationships. (AO2)</li> </ul>

Question Number	Answer	Mark
<b>3(a)</b>	<p style="text-align: center;"><b>A03 (4 marks)</b></p> <p>Award <b>1</b> mark for identifying a how the question was developed and a further expansion marks up to a maximum of <b>4</b> marks.</p> <p>Nature of question, title or hypothesis will vary depending on the location as well as the context of the investigation.</p> <ul style="list-style-type: none"> <li>Identification of a local change that has taken place (1) and designing an investigation to understand causes / threats / impacts (1).</li> <li>Use of a model e.g. bid rent model / plant succession (1) used as a basis for comparing a real world situation to theory (1).</li> <li>Use of secondary data sources to identify issues / change (1) which could be the basis for an investigation (1).</li> <li>Literature surveys reviewed (1) to understand more about a location and the issues to be investigated (1)</li> <li>Use of maps / satellite images showing the proposed study area (1) and to identify specific sampling sites (1)</li> <li>Use of forums/social media identifying local problems / conflicts (1) that could be investigated further / used as a basis for pilot studies (1)</li> </ul> <p>Note the question / hypothesis is just to provide a context for the investigation and the subsequent parts that follow. There is no separate credit for this.</p>	<b>4</b>

Question Number	Answer	Mark
<b>3(b)</b>	<p style="text-align: center;"><b>A03 (3 marks)</b></p> <p>Award <b>1</b> mark for explanation of ICT linked to analysis and a further expansion mark up to a maximum of <b>2</b> marks.</p> <p>Nature of the ICT and usage / analysis will vary depending on the location as well as the context of the investigation.</p> <ul style="list-style-type: none"> <li>• GIS was used to generate a large-scale city map, used to locate possible sites (1) and this helped determine the sampling strategy allowing for reliable data collection and subsequent analysis (1).</li> <li>• A historical map of the coast (1930's) was found on an internet archive site and allowed us to see the former position of the coastline (1). This helped us analyse coast recession and coastal erosion risk over the last 100 years (1).</li> <li>• ArcGIS Online was used to determine the travel times in a city. (1) This helped us analyse how congestion changes at different times of the day. (1).</li> <li>• A spreadsheet was used to filter and then sort the fieldwork data (1). This helped us begin the process of analysis and remove outliers before further processing of the data (1).</li> <li>• Use of Excel, or similar, to produce graphs and charts (1) to begin the process of comparison and analysis (1)</li> </ul> <p>Credit other acceptable explanations.</p>	<b>2</b>

Question number	Answer
<b>3(c)</b>	<p style="text-align: center;"><b>A03 (6 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>Content depends on students' choice of research question. Secondary data / sources include the following ideas:</p> <ul style="list-style-type: none"> <li>• Used to find out more about the population / people of an area, e.g. local census statistics, supporting primary data findings.</li> <li>• Secondary information was used in determining the historical context of the area, providing comparative context</li> <li>• Secondary data / sources was used to contextualise and challenge primary fieldwork data.</li> <li>• Secondary data / sources can be used to give baseline data, e.g. to work out rates of coastal recession using oral histories.</li> <li>• Views of people on change – Newspapers, magazines – contrasted with primary data collection.</li> <li>• Photographs – changing scene, compared to own photos.</li> <li>• May explain that secondary data led to more reliable / more valid conclusion (or challenged primary data conclusions).</li> </ul>

	<p>Nature of responses will be heavily dependent on the context of the fieldwork and the environment in which it was undertaken. However, examiners should reward for detailed clear and specific data and information which are supported with depth and detail in terms of factual accuracy and realism linked to conclusions.</p> <p><b>NB:</b> Expect a strong link to conclusions for 6 marks.</p>
