

**ADVANCED GCE**  
**GEOLOGY**  
Evolution of Life, Earth and Climate

**F795**

Candidates answer on the question paper.

**OCR supplied materials:**

None

**Other materials required:**

- Electronic calculator
- Ruler (cm/mm)

**Wednesday 8 June 2011**  
**Morning**

**Duration: 1 hour 45 minutes**

Candidate forename					Candidate surname				
--------------------	--	--	--	--	-------------------	--	--	--	--

Centre number						Candidate number			
---------------	--	--	--	--	--	------------------	--	--	--

**INSTRUCTIONS TO CANDIDATES**

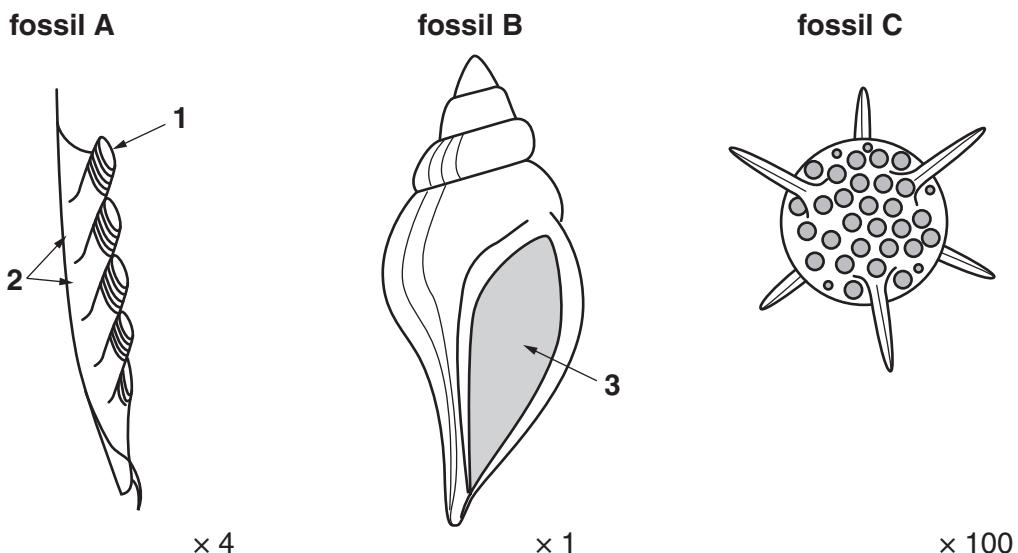

- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. If additional space is required, you should use the lined pages at the end of this booklet. The question number(s) must be clearly shown.
- Answer **all** the questions.
- Do **not** write in the bar codes.

**INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is **100**.
-  Where you see this icon you will be awarded marks for the quality of written communication in your answer.
- You may use an electronic calculator.
- This document consists of **20** pages. Any blank pages are indicated.

Answer **all** the questions.

- 1 Fossils **A**, **B** and **C** are members of different groups of fossils.

- (a) (i) For each of the fossils above, state the group to which it belongs.

fossil	group
A	
B	
C	

[3]

- (ii) Identify the morphological features **1** to **3**.

1 .....

2 .....

3 .....

[3]

- (iii) Describe and explain the mode of life of fossil **A** when it was alive.

.....  
.....  
.....  
.....

[2]

- (iv) Describe the type of coiling shown by fossil **B** using technical terms.

..... [1]

- (v) Describe the mode of life of fossil **B**.

.....  
.....  
.....  
.....

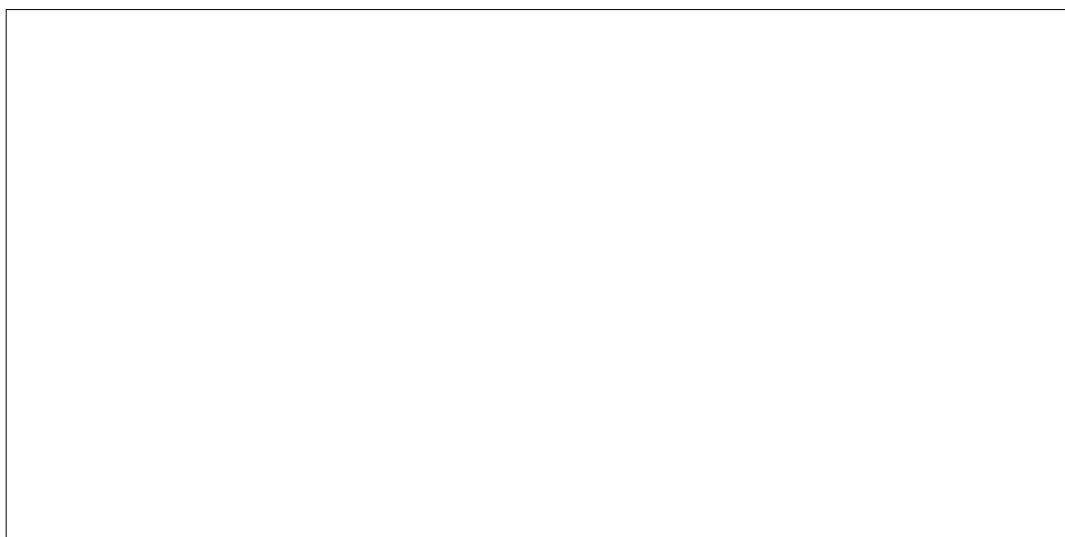

[2]

- (b) State the most likely methods of preservation of organisms **A** and **B**.

**A** .....

**B** ..... [2]

- (c) (i) Draw a labelled diagram in the space below to illustrate the morphology of a crinoid.

[3]

- (ii) Describe **one** morphological similarity present in both crinoids and regular echinoids, as seen in the fossil record.

.....  
.....

[1]

- (iii) Describe **one** difference between the modes of life of crinoids and regular echinoids.

.....  
.....

[1]

[Total: 18]

- 2 (a) The table below shows descriptions of different modes of life.

Complete the table by filling in the correct term chosen from the list provided. Terms may be used once, more than once or not at all.

articulated	benthonic	infaunal	nektonic
planktonic	sessile	vagrant	

mode of life	term
lives in sediment, usually in a burrow	
bottom dweller that lives on or in the sediment substrate	
actively swims in the water column	
moves around the sea bed	
floats in the water column, carried by currents	

[4]

- (b) (i) Explain how a derived fossil is formed.

.....  
 .....  
 .....  
 .....

[2]

- (ii) Describe why derived fossils cause problems when dating rocks.

.....  
 .....

[1]

- (c) (i) Describe and explain **three** features of a good zone fossil.

.....  
 .....  
 .....  
 .....

[3]

- (ii) Name **one** macrofossil used to zone the Lower Palaeozoic.

..... [1]

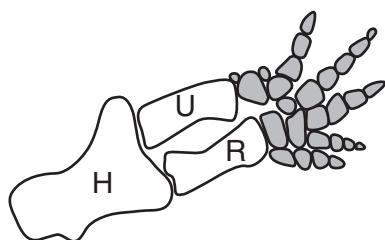

- (d) The limbs of an early fish and an early amphibian are shown below.

**fish**

× 1

**amphibian**

× 1

**KEY:** U = ulna, R = radius and H = humerus

- (i) Analyse the diagrams above and use them to describe the similarities and differences between early fish and early amphibians.

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

[4]

- (ii) Describe **one** other morphological change that occurred as fish evolved into early amphibians.

.....  
.....

[1]

**[Total: 16]**

- 3 (a) Several definitions are given below for common geological terms. Match each term to its definition using the letters given.

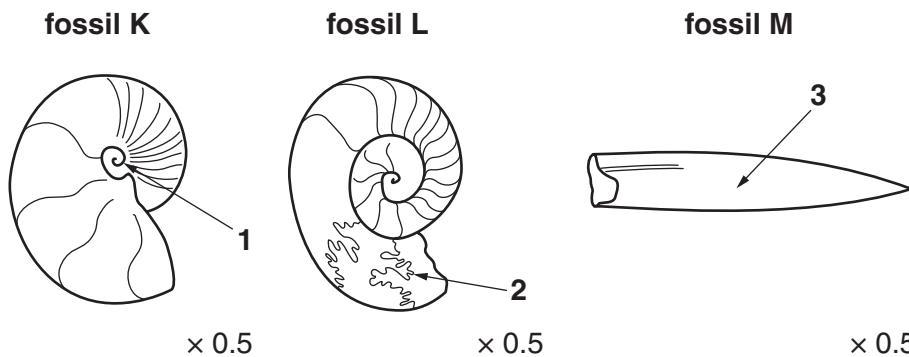

definition	term	definition D, E, F, G or J
D largest time units dividing geological history into four, e.g. Mesozoic	biostratigraphy	
E the rate of increased temperature with depth, on average is 25 °C per km	era	
F thin layers of sediment laid down seasonally in lakes	system	
G dating of rocks using fossil remains	varve	
J all the rocks from a particular period		

[4]

- (b) Describe how rocks can be dated using ideas of cross cutting relationships. Use a diagram to illustrate your answer.

[3]

- (c) Fossils **K**, **L** and **M** show members of the phylum Mollusca.

- (i) Identify the morphological features **1** to **3**.

1 .....

2 .....

3 ..... [3]

- (ii) Describe the probable function of morphological feature **2**.

..... [1]

- (iii) Describe how fossils **K**, **L** and **M** were able to alter their vertical and horizontal position in the sea.

.....  
.....  
.....  
.....  
.....  
..... [3]

- (iv) Describe the changes in the position of the siphuncle and the septal necks between nautiloids and ammonoids. Use diagrams to illustrate your answer.

nautiloid	ammonoid

.....

.....

.....

.....

.....

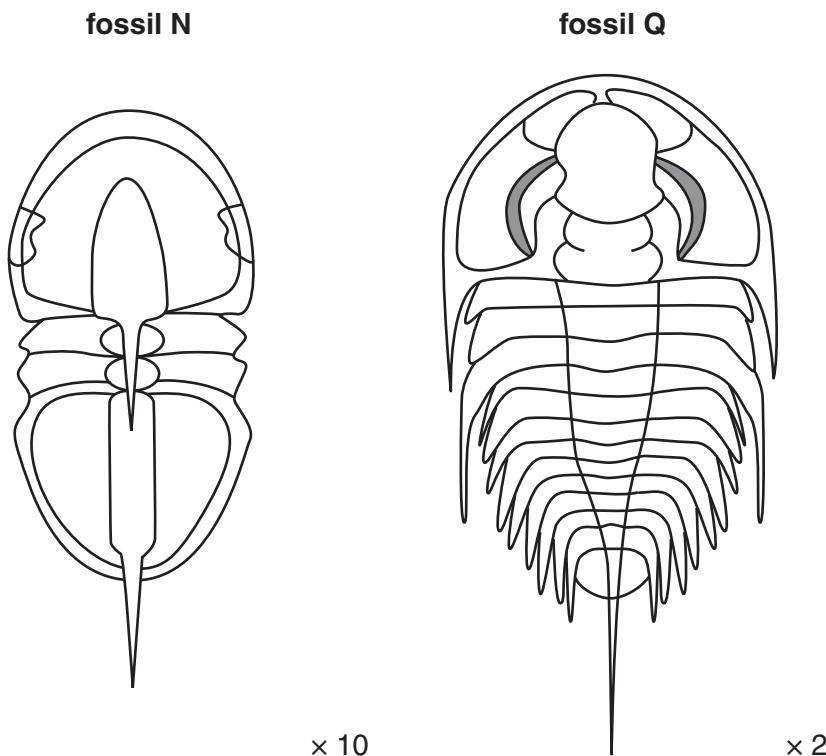

.....

.....

[4]

**[Total: 18]**

- 4 (a) Fossils **N** and **Q** are trilobites.

- (i) Label the following morphological features on the diagram of fossil **Q** above.

**facial suture**      **genal spine**      **glabella**      [3]

- (ii) Indicate, by using a bracket and the letter **P**, the position and extent of the pygidium on fossil **N**. [1]
- (iii) Describe and explain the likely mode of life of each trilobite. Give morphological evidence to support your answer.

fossil **N**.....

.....

.....

.....

fossil **Q** .....

.....

.....

.....

[4]

**10**

- (b)** Describe the nature of the compound eye, found in some trilobites.

.....  
.....

[1]

- (c)** Discuss the difficulties in inferring the mode of life of trilobites.

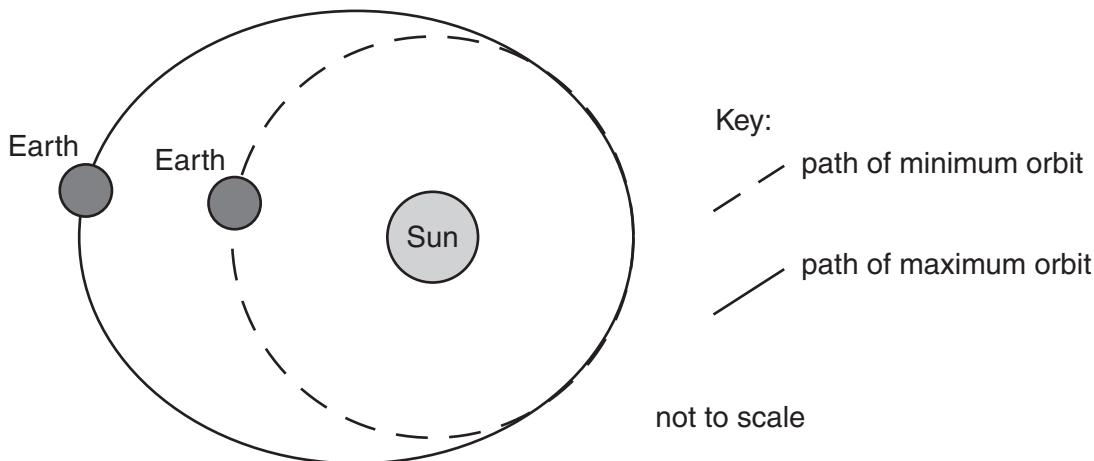

.....  
.....  
.....  
.....

[2]

**[Total: 11]**

- 5 (a) Milankovitch cycles are caused by changes in the amount of solar radiation reaching the Earth from the Sun over time. There are three main types of cycle that operate together described as *eccentricity*, *obliquity* and *precession*.

The diagram below shows how the Earth's orbit changes over time.

- (i) Indicate the name of the cycle shown in the diagram above. Circle the correct answer below.

**eccentricity**

**obliquity**

**precession**

[1]

- (ii) Describe how the changes in the Earth's orbit will affect the amount of solar radiation reaching the surface of the Earth.
- .....  
.....  
.....  
.....  
.....

[3]

- (iii) Describe how Milankovitch cycles can be identified in rocks.
- .....  
.....  
.....  
.....

[2]

**12**

- (b) The ratio of the isotopes  $^{16}\text{O}$  and  $^{18}\text{O}$  in bivalve shells can be used to determine sea temperatures.

The table below shows the concentration of  $^{18}\text{O}$  isotope data for six bivalve shells from a sequence of six beds.

bivalve identification number	$^{18}\text{O}$ (parts per million)
6 (youngest)	0.25
5	3.20
4	2.85
3	0.10
2	3.00
1 (oldest)	2.50

- (i) How is oxygen incorporated into the shells of bivalves?

.....  
.....

[1]

- (ii) Describe the conditions that result in increased amounts of  $^{18}\text{O}$  in rocks.

.....  
.....

[1]

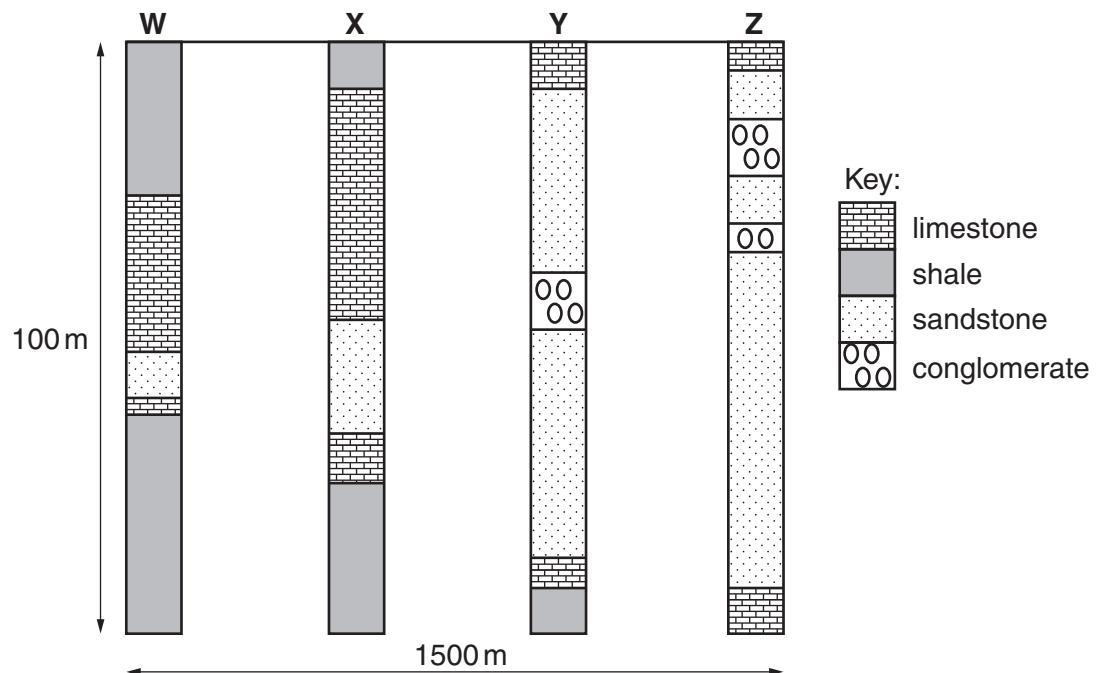

- (iii) Describe and account for the variation in the isotope data given in the table above.

.....  
.....  
.....  
.....  
.....  
.....

[3]

**[Total: 11]**

- 6 (a) Four boreholes (**W**, **X**, **Y** and **Z**) were logged and are shown in the diagram below.

(i) Correlate the beds by drawing lines between the four boreholes. [3]

(ii) By which method did you correlate the four sequences?

..... [1]

(b) Explain the problems of using this method of correlation.

.....  
.....  
.....  
..... [2]

[Total: 6]

**TURN OVER FOR QUESTION 7**

- 7 Explain how radiometric dating is used to establish an absolute time scale. Describe and explain the problems of obtaining accurate radiometric dates.

*You should structure your answer to include:*

- the theory behind the method
  - the problems dating sedimentary, igneous and metamorphic rocks.

. [10]

[Total: 10]

**TURN OVER FOR QUESTION 8**

- 8** Describe how fossils are exceptionally preserved in tar pits, amber and the Solnhofen Limestone.

*You should structure your answer to include the conditions essential for exceptional preservation.*
