2.

Sarah's mother died from heart disease in her early fifties. Investigations showed that there was a family history on her mother's side of high blood cholesterol. Sarah already has high blood cholesterol. Sarah's father, Bill (66 years old), has been a lifetime cigarette smoker and this has resulted in heart disease and respiratory problems. He has lived in a small house about 10 miles away since Sarah was born. This is a deprived area close to an industrial estate. Unemployment is high with crime and vandalism common.
