MS03

Unit Statistics 3

Friday 22 June 2012 1.30 pm to 3.00 pm

For this paper you must have:

- the blue AQA booklet of formulae and statistical tables.

You may use a graphics calculator.

Time allowed

- 1 hour 30 minutes

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.
- The **final** answer to questions requiring the use of tables or calculators should normally be given to three significant figures.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

J U N 1 2 M S 0 3 0 1

Answer **all** questions.

Answer each question in the space provided for that question.

- 1** A wildlife expert measured the neck lengths, x metres, and the tail lengths, y metres, of a sample of 12 mature male giraffes as part of a study into their physical characteristics. The results are shown in the table.

x	1.62	1.81	1.75	1.59	1.66	1.61	1.73	1.81	1.88	1.72	1.62	1.60
y	2.33	2.48	2.40	2.31	2.37	2.29	2.47	2.46	2.51	2.34	2.44	2.46

- (a) Calculate the value of the product moment correlation coefficient between x and y .
(2 marks)
- (b) Investigate, at the 1% level of significance, the hypothesis that there is a positive correlation between the neck length and the tail length of mature male giraffes. The sample of measurements may be regarded as a random sample from a bivariate normal distribution.
(4 marks)

- 3** A hotel has three types of room: double, twin and suite. The **percentage** of rooms in the hotel of each type is 40, 45 and 15 respectively.

Each room in the hotel may be occupied by 0, 1, 2, or 3 or more people.

The **proportional** occupancy of **each** type of room is shown in the table.

		Occupancy			
		0	1	2	3 or more
Room	Double	0.15	0.35	0.45	0.05
	Twin	0.05	0.55	0.30	0.10
	Suite	0.10	0.20	0.55	0.15

For example, the probability that, on a particular night, a double room has exactly 2 occupants is 0.45.

- (a) On a particular night, a room is selected at random. Find the probability that this room is:
- (i) an unoccupied suite; *(1 mark)*
 - (ii) occupied by 2 or more people; *(2 marks)*
 - (iii) unoccupied; *(2 marks)*
 - (iv) a double room, given that it is unoccupied; *(2 marks)*
 - (v) a suite, given that it is occupied. *(3 marks)*
- (b) The hotel has a very large number of rooms from which, on a particular night, a random sample of 3 rooms is selected.
- Given that all 3 of these rooms are occupied, calculate an estimate of the probability that each room is of a different type. *(4 marks)*

QUESTION
PART
REFERENCE

Answer space for question 5

A large rectangular area with horizontal dotted lines for writing an answer.

6 Alyssa lives in the country but works in a city centre.

Her journey to work each morning involves a car journey, a walk and wait, a train journey, and a walk.

Her car journey time, U minutes, from home to the village car park has a mean of 13 and a standard deviation of 3.

Her time, V minutes, to walk from the village car park to the village railway station and wait for a train to depart has a mean of 15 and a standard deviation of 6.

Her train journey time, W minutes, from the village railway station to the city centre railway station has a mean of 24 and a standard deviation of 4.

Her time, X minutes, to walk from the city centre railway station to her office has a mean of 9 and a standard deviation of 2.

The values of the product moment correlation coefficient for the above 4 variables are

$$\rho_{UV} = -0.6 \quad \text{and} \quad \rho_{UW} = \rho_{UX} = \rho_{VW} = \rho_{VX} = \rho_{WX} = 0$$

(a) Determine values for the mean and the variance of:

(i) $M = U + V$; *(4 marks)*

(ii) $D = W - 2U$; *(3 marks)*

(iii) $T = M + W + X$, given that $\rho_{MW} = \rho_{MX} = 0$. *(2 marks)*

(b) Assuming that the variables M , D and T are normally distributed, determine the probability that, on a particular morning:

(i) Alyssa's journey time from leaving home to leaving the village railway station is exactly 30 minutes; *(1 mark)*

(ii) Alyssa's train journey time is more than twice her car journey time; *(3 marks)*

(iii) Alyssa's total journey time is between 50 minutes and 70 minutes. *(4 marks)*
