General Certificate of Education June 2005 Advanced Level Examination

MBP6

MATHEMATICS AND STATISTICS (SPECIFICATION B) Unit Pure 6

Tuesday 28 June 2005 Afternoon Session

In addition to this paper you will require:

- a 12-page answer book;
- the AQA booklet of formulae and statistical tables.

You may use a graphics calculator.

Time allowed: 1 hour 45 minutes

Instructions

- Use blue or black ink or ball-point pen. Pencil should only be used for drawing.
- Write the information required on the front of your answer book. The *Examining Body* for this paper is AQA. The *Paper Reference* is MBP6.
- Answer all questions.
- All necessary working should be shown; otherwise marks for method may be lost.
- The **final** answer to questions requiring the use of tables or calculators should normally be given to three significant figures.

Information

- The maximum mark for this paper is 80.
- Mark allocations are shown in brackets.

Advice

• Unless stated otherwise, formulae may be quoted, without proof, from the booklet.

P75810/0605/MBP6 6/6/6/ MBP6

Answer all questions.

- 1 Show that the radius of curvature, at the point where x = a, of the curve with equation $y = \cosh x$ is $\cosh^2 a$. (4 marks)
- 2 By writing $\sinh y = x$, prove that

$$\sinh^{-1} x = \ln\left\{x + \sqrt{x^2 + 1}\right\} \tag{4 marks}$$

- 3 (a) Solve the equation $7 \cosh x = \sinh x$, giving your answer in the form $\ln k$, where k is an integer. (3 marks)
 - (b) On the same diagram, sketch the graphs of $y = \sinh x$ and $y = 7 \cosh x$, indicating the coordinates of the points where the curves cross the axes. (4 marks)
- 4 A curve is defined parametrically by

$$x = t^2 + \frac{2}{3}t^3$$
, $y = t + t^2$

(a) Verify that
$$\left(\frac{dx}{dt}\right)^2 + \left(\frac{dy}{dt}\right)^2 = (1 + 2t + 2t^2)^2$$
. (3 marks)

- (b) (i) Determine the length of the arc of this curve between the points where t = 0 and t = 1.
 - (ii) When this arc is rotated about the x-axis through 2π radians, it generates a surface of revolution with area S. Find S in terms of π . (4 marks)

5 (a) (i) Show that
$$\frac{1}{\cos \theta + i \sin \theta} = \cos \theta - i \sin \theta$$
. (1 mark)

(ii) Given that $z = \cos \frac{\pi}{4} + i \sin \frac{\pi}{4}$, evaluate

$$\left(z + \frac{1}{z}\right)^{12} \tag{4 marks}$$

(b) (i) Use de Moivre's Theorem to simplify the expression

$$[r(\cos\theta + i\sin\theta)]^{-n} \tag{1 mark}$$

(ii) Using this result, or otherwise, find the integer m for which

$$\left(\frac{1}{2} - \frac{1}{2}i\right)^{-12} = m \tag{5 marks}$$

6 All points (x, y) on a particular curve satisfy the differential equation

$$\frac{d^2y}{dx^2} - 4\frac{dy}{dx} + 4y = 4 + 27e^{-x}$$

The point P(0, 6) lies on this curve, and the gradient of the curve at P is zero.

- (a) Without solving the differential equation, evaluate $\frac{d^2y}{dx^2}$ at P and hence describe P as fully as possible. (3 marks)
- (b) By solving the differential equation, find the equation of this curve. (11 marks)
- 7 (a) Use the identity $\sin(A+B) + \sin(A-B) = 2\sin A \cos B$ to prove that:

(i)
$$\sin 2\theta = 2\sin \theta \cos \theta$$
; (1 mark)

(ii)
$$\sin 3\theta + \sin \theta = 4\sin \theta - 4\sin^3 \theta$$
. (4 marks)

(b) Show that
$$(2s-1)$$
 is a factor of $8s^3 - 8s + 3$. (1 mark)

(c) Solve the equation

$$\sin 3\theta + \sin \theta = \frac{3}{2}$$

giving your answers in radians in the interval $0 < \theta < \pi$. (9 marks)

- 8 (a) (i) Write down the matrix R which represents an anticlockwise rotation through $\frac{\pi}{4}$ radians about O. (1 mark)
 - (ii) Describe the transformation with matrix $S = \begin{bmatrix} 1 & k \\ 0 & 1 \end{bmatrix}$, where k is a positive constant.
 - (iii) Show that $\mathbf{R}^{-1}\mathbf{S}\mathbf{R} = \frac{1}{2} \begin{bmatrix} k+2 & k \\ -k & 2-k \end{bmatrix}$. (3 marks)
 - (b) Show that the matrix $\mathbf{M} = \begin{bmatrix} 3 & 2 \\ -2 & -1 \end{bmatrix}$ has just one eigenvalue λ . State the value of λ and find a corresponding eigenvector. (4 marks)
 - (c) The transformation **T** is defined by $\begin{bmatrix} x' \\ y' \end{bmatrix} = \boldsymbol{M} \begin{bmatrix} x \\ y \end{bmatrix}$.
 - (i) Write down a cartesian equation of the line of invariant points of **T**, and give a reason for your choice of answer. (2 marks)
 - (ii) Show that, for some value of k, $M = R^{-1}SR$ and hence give a full geometric description of T. (3 marks)
