

1. [In this question \mathbf{i} and \mathbf{j} are horizontal unit vectors.]

A small bead of mass 0.5 kg is threaded on a smooth horizontal wire. The bead is initially at rest at the point with position vector $(\mathbf{i} - 6\mathbf{j})$ m. A constant horizontal force \mathbf{P} N then acts on the bead causing it to move along the wire. The bead passes through the point with position vector $(7\mathbf{i} - 14\mathbf{j})$ m with speed $2\sqrt{7}$ m s⁻¹.

Given that \mathbf{P} is parallel to $(6\mathbf{i} + \mathbf{j})$, find \mathbf{P} .

Question 4 continued

Lined writing area for the answer to Question 4.

5.

Figure 1

A pendulum P is modelled as a uniform rod AB , of length $9a$ and mass m , rigidly fixed to a uniform circular disc of radius a and mass $2m$. The end B of the rod is attached to the centre of the disc, and the rod lies in the plane of the disc, as shown in Figure 1. The pendulum is free to rotate in a vertical plane about a fixed smooth horizontal axis L which passes through the end A and is perpendicular to the plane of the disc.

(a) Show that the moment of inertia of P about L is $190ma^2$. (4)

The pendulum makes small oscillations about L .

(b) By writing down an equation of motion for P , find the approximate period of these small oscillations. (7)
