

1.

Figure 1

A rough disc is rotating in a horizontal plane with constant angular speed 20 revolutions per minute about a fixed vertical axis through its centre O . A particle P rests on the disc at a distance 0.4 m from O , as shown in Figure 1. The coefficient of friction between P and the disc is μ . The particle P is on the point of slipping.

Find the value of μ .

(6)

2. A particle P of mass 0.5 kg is moving along the positive x -axis in the positive x -direction. The only force on P is a force of magnitude $\left(2t + \frac{1}{2}\right)$ N acting in the direction of x increasing, where t seconds is the time after P leaves the origin O . When $t=0$, P is at rest at O .

(a) Find an expression, in terms of t , for the velocity of P at time t seconds. (3)

The particle passes through the point A with speed 6 m s^{-1} .

(b) Find the distance OA . (6)

3.

Figure 2

Two particles P and Q , of mass m and $2m$ respectively, are attached to the ends of a light inextensible string of length $6l$. The string passes through a small smooth fixed ring at the point A . The particle Q is hanging freely at a distance l vertically below A . The particle P is moving in a horizontal circle with constant angular speed ω . The centre O of the circle is vertically below A . The particle Q does not move and AP makes a constant angle θ with the downward vertical, as shown in Figure 2.

Show that

(i) $\theta = 60^\circ$

(ii) $\omega = \sqrt{\left(\frac{2g}{5l}\right)}$

(8)

4. A particle P of mass 2 kg is attached to one end of a light elastic string of natural length 1.2 m. The other end of the string is attached to a fixed point O on a rough horizontal plane. The coefficient of friction between P and the plane is $\frac{2}{5}$. The particle is held at rest at a point B on the plane, where $OB = 1.5$ m. When P is at B , the tension in the string is 20 N. The particle is released from rest.

(a) Find the speed of P when $OP = 1.2$ m.

(7)

The particle comes to rest at the point C .

(b) Find the distance BC .

(2)

5.

Figure 3

The shaded region R is bounded by the curve with equation $y = (x + 1)^2$, the x -axis, the y -axis and the line with equation $x = 2$, as shown in Figure 3. The region R is rotated through 2π radians about the x -axis to form a uniform solid S .

(a) Use algebraic integration to find the x coordinate of the centre of mass of S .

(8)

Figure 4

A uniform solid hemisphere is fixed to S to form a solid T . The hemisphere has the same radius as the smaller plane face of S and its plane face coincides with the smaller plane face of S , as shown in Figure 4. The mass per unit volume of the hemisphere is 10 times the mass per unit volume of S . The centre of the circular plane face of T is A . All lengths are measured in centimetres.

(b) Find the distance of the centre of mass of T from A .

(5)

6.

Figure 5

The points A and B are 3.75 m apart on a smooth horizontal floor. A particle P has mass 0.8 kg. One end of a light elastic spring, of natural length 1.5 m and modulus of elasticity 24 N, is attached to P and the other end is attached to A . The ends of another light elastic spring, of natural length 0.75 m and modulus of elasticity 18 N, are attached to P and B . The particle P rests in equilibrium at the point O , where AOB is a straight line, as shown in Figure 5.

(a) Show that $AO = 2.4$ m. (4)

The point C lies on the straight line AOB between O and B . The particle P is held at C and released from rest.

(b) Show that P moves with simple harmonic motion. (5)

The maximum speed of P is $\sqrt{2}$ m s⁻¹.

(c) Find the time taken by P to travel 0.3 m from C . (5)

7.

Figure 6

A particle P of mass $5m$ is attached to one end of a light inextensible string of length a . The other end of the string is attached to a fixed point O . The particle is held at the point A , where $OA = a$ and OA is horizontal, as shown in Figure 6. The particle is projected vertically downwards with speed $\sqrt{\left(\frac{9ag}{5}\right)}$. When the string makes an angle θ with the downward vertical through O and the string is still taut, the tension in the string is T .

(a) Show that $T = 3mg(5 \cos \theta + 3)$. (6)

At the instant when the particle reaches the point B the string becomes slack.

(b) Find the speed of P at B . (3)

At time $t = 0$, P is at B .

At time t , before the string becomes taut once more, the coordinates of P are (x, y) referred to horizontal and vertical axes with origin O . The x -axis is directed along OA produced and the y -axis is vertically upward.

(c) Find

(i) x in terms of t, a and g ,

(ii) y in terms of t, a and g . (7)
