You must have:

Mathematical Formulae and Statistical Tables (Pink)

Total Marks

--

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

PEARSON

2.

(i) $\mathbf{A} = \begin{pmatrix} -4 & 10 \\ -3 & k \end{pmatrix}$, where k is a constant.

The triangle T is transformed to the triangle T' by the transformation represented by \mathbf{A} .

Given that the area of triangle T' is twice the area of triangle T ,
find the possible values of k .

(4)

(ii) Given that

$$\mathbf{B} = \begin{pmatrix} 1 & -2 & 3 \\ -2 & 5 & 1 \end{pmatrix}, \quad \mathbf{C} = \begin{pmatrix} 2 & 8 \\ 0 & 2 \\ 1 & -2 \end{pmatrix}$$

find \mathbf{BC} .

(3)

5.

$$z = 5 + i\sqrt{3}, \quad w = \sqrt{3} - i$$

- (a) Find the value of $|w|$. (1)

Find in the form $a + ib$, where a and b are real constants,

- (b) zw , showing clearly how you obtained your answer, (2)

- (c) $\frac{z}{w}$, showing clearly how you obtained your answer. (3)

Given that

$$\arg(z + \lambda) = \frac{\pi}{3}, \quad \text{where } \lambda \text{ is a real constant,}$$

- (d) find the value of λ . (2)

7.
$$\mathbf{P} = \begin{pmatrix} 3a & -2a \\ -b & 2b \end{pmatrix}, \quad \mathbf{M} = \begin{pmatrix} -6a & 7a \\ 2b & -b \end{pmatrix};$$

where a and b are non-zero constants.

(a) Find \mathbf{P}^{-1} , leaving your answer in terms of a and b . (3)

Given that

$$\mathbf{M} = \mathbf{PQ}$$

(b) find the matrix \mathbf{Q} , giving your answer in its simplest form. (3)

8. The parabola C has equation $y^2 = 4ax$, where a is a positive constant.

The point $P(ap^2, 2ap)$ lies on the parabola C .

(a) Show that an equation of the normal to C at P is

$$y + px = ap^3 + 2ap \tag{5}$$

The normal to C at the point P meets the x -axis at the point $(6a, 0)$ and meets the directrix of C at the point D . Given that $p > 0$,

(b) find, in terms of a , the coordinates of D . **(4)**

Given also that the directrix of C cuts the x -axis at the point X ,

(c) find, in terms of a , the area of the triangle $XP D$, giving your answer in its simplest form. **(3)**
