Instructions

- Use blue or black ink or ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions in the spaces provided. All working must be shown.
- Do all rough work in this book. Cross through any work you do not want marked.

Information

- The maximum mark for this paper is 40.
- Mark allocations are shown in brackets.
- The paper carries 10% of the total marks for Physics Advanced.
- A *Data Sheet* is provided on pages 3 and 4. You may wish to detach this perforated sheet at the start of the examination.
- You are expected to use a calculator where appropriate.
- In questions requiring description and explanation you will be assessed on your ability to use an appropriate form and style of writing, to organise relevant information clearly and coherently, and to use specialist vocabulary where appropriate. The degree of legibility of your handwriting and the level of accuracy of your spelling, punctuation and grammar will also be taken into account.

Data Sheet

- A perforated *Data Sheet* is provided as pages 3 and 4 of this question paper.
- This sheet may be useful for answering some of the questions in the examination.
- You may wish to detach this sheet before you begin work.

SECTION A: NUCLEAR INSTABILITY

Answer **all** of this question

- 1 (a) The lead nuclide $^{210}_{82}\text{Pb}$ is unstable and decays in three stages through α and β emissions to a different lead nuclide $^{206}_{82}\text{Pb}$. The position of these lead nuclides on a grid of neutron number, N , against proton number, Z , is shown below.

On the grid draw **three** arrows to represent one possible decay route.

Label each arrow with the decay taking place.

- (b) The copper nuclide $^{64}_{29}\text{Cu}$ may decay by positron emission or by electron capture to form a nickel (Ni) nuclide.

Complete the two equations that represent these two possible modes of decay.

positron emission $^{64}_{29}\text{Cu}$

electron capture $^{64}_{29}\text{Cu}$

- (c) The nucleus of an atom may be investigated by scattering experiments in which radiation or particles bombard the nucleus.

Name **one** type of radiation or particle that may be used in this investigation and describe the main physical principle of the scattering process.

State the information which can be obtained from the results of this scattering.

You may be awarded marks for the quality of written communication in your answer.
