

OXFORD CAMBRIDGE AND RSA EXAMINATIONS

Advanced GCE

PHYSICS A

2826/01

Unifying Concepts in Physics

Monday

28 JANUARY 2002

Morning

1 hour 15 minutes

Candidates answer on the question paper. Additional materials: Electronic calculator

Candidate Name	Centre Number	Candidate Number

TIME 1 hour 15 minutes

INSTRUCTIONS TO CANDIDATES

- Write your name in the space above.
- Write your Centre number and Candidate number in the boxes above.
- Answer all the questions.
- Write your answers in the spaces on the question paper.
- Read each question carefully and make sure you know what you have to do before starting your answer.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- You may use an electronic calculator.
- You are advised to show all the steps in any calculations.

FOR EXAMINER'S USE		
Qu.	Max.	Mark
1	21	
2	8	-
3	17	
4	14	
TOTAL	60	

Data

speed of light in free space,
permeability of free space,
permittivity of free space,
elementary charge,
the Planck constant,
unified atomic mass constant,
rest mass of electron,
rest mass of proton,
molar gas constant,
the Avogadro constant,
gravitational constant,

acceleration of free fall,

 $c = 3.00 \times 10^8 \,\mathrm{m\,s^{-1}}$

 $\mu_0 = 4\pi \times 10^{-7} \,\mathrm{H\,m^{-1}}$

 $\epsilon_0 \, = 8.85 \times 10^{-12} \, \mathrm{F \, m^{-1}}$

 $e = 1.60 \times 10^{-19} \,\mathrm{C}$

 $h = 6.63 \times 10^{-34} \,\mathrm{Js}$

 $u = 1.66 \times 10^{-27} \text{ kg}$

 $m_{\rm e} = 9.11 \times 10^{-31} \, \rm kg$

 $m_{\rm p} = 1.67 \times 10^{-27} \, \rm kg$

 $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$

 $N_{\rm A} = 6.02 \times 10^{23} \, \rm mol^{-1}$

 $G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$

 $g = 9.81 \text{ m s}^{-2}$

Formulae

$$s = ut + \frac{1}{2}at^2$$

$$v^2 = u^2 + 2as$$

$$n = \frac{1}{\sin C}$$

$$\frac{1}{C}=\frac{1}{C_1}+\frac{1}{C_2}+\ldots$$

$$C = C_1 + C_2 + \dots$$

$$x = x_0 e^{-t/CR}$$

$$p = \frac{1}{3} \frac{Nm}{V} < c^2 >$$

radioactive decay,

$$X = X_0 e^{-\lambda t}$$

$$t_{\frac{1}{2}} = \frac{0.693}{\lambda}$$

critical density of matter in the Universe,

$$\rho_0 = \frac{3H_0^2}{8\pi G}$$

$$=\sqrt{\{1-\frac{v^2}{c^2}\}}$$

current,

$$I = nAve$$

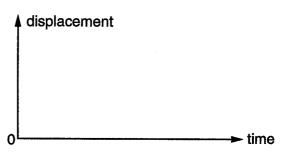

nuclear radius,

$$r = r_0 A^{1/3}$$

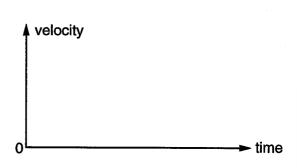

sound intensity level,

$$= 10 \lg \left(\frac{I}{I_o}\right)$$

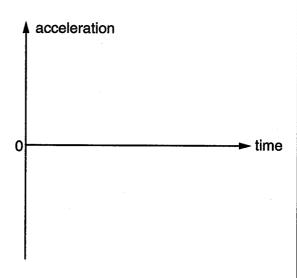

- A brittle object, such as a china cup, breaks when it is dropped and hits a wooden floor that is distorted elastically a little at impact. Consider the physics of this event from the time the object is dropped until it is broken and stationary. You can assume that it does not bounce. Relate your answers to one another where appropriate.
 - (a) Using labelled sketch graphs show how the following vary with time:
 - (i) the displacement from the point of release

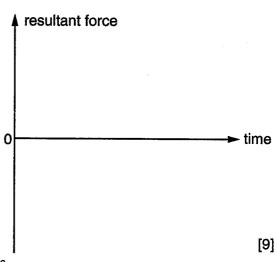

(ii) the velocity

(iii) the acceleration

(iv) the resultant force on the object.

b)	Des	cribe for the falling and breaking of the cup, the application of
	(i)	the law of conservation of energy
	(ii)	the law of conservation of momentum.
		[8]
(c)		lain, making use of answers already given, why the china cup breaks but a rubber falling the same distance would not.

A small domestic electric appliance, such as a toothbrush, runs off a 9 V rechargeable battery contained in its handle. In use, the appliance is removed from a charging unit and a small light in the handle goes out as it is removed. Mains power at 230 V is supplied to the charging unit. The arrangement, just as the appliance is being removed from the charging unit, is as shown in Fig. 2.1. There are no electrical connections between the handle and the charging unit.

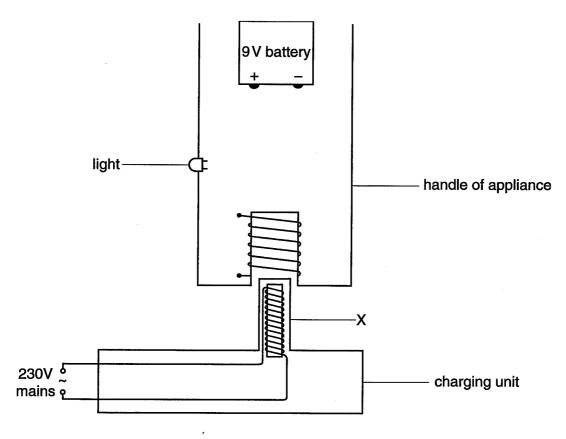

Fig. 2.1

(a) When the handle is lowered on to the charging unit, region X becomes a well-known

3	Wh	en d	ealing with exponential discharge of a capacitor through a resistor, it is normal to use
	an	eque	$Q = Q_0 e^{-\frac{t}{CR}}.$
	Wh	en d	ealing with radioactive decay it is normal to use a similar equation
			$N = N_0 e^{-\lambda t}$
	(a)	Sta	te what the following symbols stand for in the equations.
		Q	
		Q_0	
		С	
		R	t
			[4]
	(b)	(i)	Show that the expression t/CR has no units
		(ii)	State the SI unit of λ
	(a)	۸ ۵	[4]
	(6)		apacitor of capacitance 100 μF discharges through a resistor of resistance 200 $k\Omega$.
			culate
		(i)	the fraction of the original charge remaining on the capacitor after five time constants.
			fraction =

	(,	life is the time for half of its original charge to have left the capacitor.
		half-life =s
		[5]
(d)		ilarly, by analogy, it is possible to refer to a <i>time constant</i> for the radioactive decay of uclide.
	(i)	By comparing the equations for capacitor discharge and radioactive decay write down an expression for the time constant for radioactive decay in terms of λ .
	(ii)	Calculate
		1. the time constant for a radioactive nuclide whose half-life is 850 s
		time constant =s
		2. the fraction of undecayed nuclei of this nuclide after five time constants.
		fraction =[4]
		[Total : 17]

(a)	The A-level physics course deals with three force fields. Using definitions of these three fields state the physical quantity on which each force acts.
	[6]
(b)	Discuss the similarities and the differences between the forces associated with each of the fields.
	[5]

For Examiner's Use

(c)	Explain how it is known that there must be a different type of field within the nucleus of an atom.
	[3]

[Total : 14]
