***Mark Scheme***

---

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: [aqa.org.uk](http://aqa.org.uk)

**Copyright**

AQA retains the copyright on all its publications. However, registered centres for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to centres to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

## Key to mark scheme abbreviations

M	mark is for method
m or dM	mark is dependent on one or more M marks and is for method
A	mark is dependent on M or m marks and is for accuracy
B	mark is independent of M or m marks and is for method and accuracy
E	mark is for explanation
✓ or ft or F	follow through from previous incorrect result
CAO	correct answer only
CSO	correct solution only
AWFW	anything which falls within
AWRT	anything which rounds to
ACF	any correct form
AG	answer given
SC	special case
OE	or equivalent
A2,1	2 or 1 (or 0) accuracy marks
-x EE	deduct x marks for each error
NMS	no method shown
PI	possibly implied
SCA	substantially correct approach
c	candidate
sf	significant figure(s)
dp	decimal place(s)

## No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

**Otherwise we require evidence of a correct method for any marks to be awarded.**

Q	Solution	Marks	Total	Comments	
2(a)(i)	$H_0 \mu, \eta = 10.8$	B1		Or equivalent in words, eg 'average time spent on study' or 'population average'	
	$H_1 \mu, \eta > 10.8$				
	1 tail 5%				
	diffs 6.65 3.85 1.5 0.8 -3.7	M1			For differences from 10.8
	rank 10 6 2 1 5				
	diffs 4.35 5.4 -3.2 -4.05 -2.2	m1			Ranks as one group dep on differences (allow either way) SC1 for sign test
	rank 8 9 4 7 3				
	$T_+ = 10 + 6 + 2 + 1 + 8 + 9 = 36$	m1			Total of any ranks dep on diffs
	$T_- = 5 + 4 + 7 + 3 = 19$	A1			One correct
	Test stat $T = 19$				
$n = 10$	B1	For cv			
cv = 11					
$T > 11$	m1	Comparison lower (plausible) T (not -ve) and cv. Can ft or 44/36			
Accept $H_0$	A1				
There is no significant evidence to suggest that average time spent per week of term has increased from 10.8 hours.	E1	9	In context		
(a)(ii)	Conclusions cannot be generalised to whole population. Students at the college concerned may not represent a random sample of all such students in the country. Study patterns may vary at different times of the year.	E1	1	For any one point clearly explained (not 'may have lied', 'not correctly recorded')	
(b)(i)	Wilcoxon signed-rank takes into account the magnitude of the ranks of the differences whereas the sign test only considers the sign of those differences. <b>or</b> Wilcoxon signed-rank is more likely to detect a difference if one exists. <b>or</b> More powerful.	E1	1	Or 'magnitude of differences' (not 'takes data/size of data into account')	
(ii)	If a direction/preference only was given then there would be no numerical data available to find the differences in the data that need to be used for the Wilcoxon signed-rank test. An example would be if students only had to state whether they were studying more hours, less hours or the same hours this year as last year. <b>or</b> If data to be analysed was very asymmetrical. An example could be that the times for study were found to be skew.	B1	2	For one valid situation - a direction/preference or asymmetrical ...	
		E1		... explained clearly in context
