

**MARK SCHEME for the May/June 2010 question paper  
for the guidance of teachers**

**9706 ACCOUNTING**

**9706/22**

Paper 22 (Structured Questions (Core)),  
maximum raw mark 90

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

3 (a) (i) The break-even point is the level of activity at which the business makes neither a profit nor a loss – i.e. total contribution = total fixed costs. (accept a relevant formula) [2]

(ii) The margin of safety is the distance between the break-even point and the expected level of activity. It is the amount by which actual activity can fall short of expected activity before a loss is incurred. [2]

(f) Revised contribution = sales - 5% - variable costs

$$460\,000 - 23\,000 - 299\,000 \quad \$138\,000$$

**1      1      1      1of**

$$\text{Revised c/s ratio} = \frac{\text{revised contribution}}{\text{new sales}} \times 100$$

$$\frac{\$138\,000 \times 100}{460\,000 \times 0.95} \quad 31.57895\%$$

**1of**  
**1      1**

$$\text{Fixed costs} + \text{profit} \times \frac{100}{\text{c/s ratio}}$$

$$= (90\,000 + 80\,000) \times \frac{100}{31.57895} \quad \$538\,333$$
