
Sample Assignment: Unit 14 Developing and Creating Websites

ASSIGNMENT 3: MY HOBBY

This assignment will allow you to meet all of the assessment requirements for Unit 14: Developing and Creating Websites. You should look at the Assessment Evidence Grid to check what you need to demonstrate in each task to achieve each mark band.

Do you have a particular – perhaps unusual – hobby? Design and produce a website of at least three pages to provide information to the public about your hobby to try to encourage others to take it up.

Your work must include:

- A report critically evaluating the design and structure of at least two existing websites. This report should make it clear how each website has influenced the design of the final website.
- An initial design for a website of at least three pages together with detailed plans for publishing the website. The initial designs should include diagrams showing the planned structure of the website, a storyboard, an index of pages and files to be used in the site as well as a task list or action plan for completing the site. The plans for publishing the site should include details of the domain name and home page location. You should include an analysis of your website design that explains the decisions made over issues such as font style, graphics and colour. The report should also explain the choice of domain name and home page location and give alternatives.
- Annotated printouts of the finished website in WYSIWYG and HTML format. The WYSIWYG printout should be annotated to identify and explain the features and techniques used in the web pages. The HTML format should be annotated to identify how script commands within the coding have been used to structure the layout of the website.
- A detailed test plan along with evidence of thorough testing of the website in line with that test plan in order to confirm that the product meets the initial design specifications, showing revisions of the product if necessary.
- A well written, detailed and critical evaluation of the website. This report should evaluate both the website that has been produced and the process of its production, suggesting improvements to both as necessary.
