## Teacher Support Materials: Unit 13 Artwork and Imaging

---

### Teacher Note

This unit requires candidates to develop computer artwork in response to a client brief. This is best achieved when a real client has provided the brief so that feedback can be obtained at various stages of the project.

If this is not possible, or if you are using the assignment ideas provided, you or another suitable person will need to act as the client so that feedback can be given. In this case, you will need to be careful to ensure that realistic feedback is given in the role of client, rather than the feedback that you might give as a teacher.
