**Copyright**

AQA retains the copyright on all its publications. However, registered centres for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to centres to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

The Assessment and Qualifications Alliance (AQA) is a company limited by guarantee registered in England and Wales (company number 3644723) and a registered charity (registered charity number 1073334).  
Registered address: AQA, Devas Street, Manchester M15 6EX.

## **GCE Art and Design General**

*For information specific to Textile Design go to page 5.*

### **General**

Familiarity with the examination resulted in more appropriately structured courses this year. The different demands of each unit were, in the main, been better managed. Students continued to explore a wide range of starting points, responding to diverse ideas and themes. Both traditional and contemporary methods and approaches were seen. Increasingly, in the latter parts of courses, students developed their own ideas. Many have engaged in issues-based work. The influence of photography, across a range of endorsements, had an impact on the nature of practice.

The response of students to critical/contextual materials had a significant influence on the work produced. Materials from books, magazines, the Internet and galleries were widely used. On occasions, visits to artists' and designers' studios and workshops proved to be productive. Unfortunately, some students found it difficult to move beyond the work of artists, designers and craftspeople and failed to make meaningful connections with their own work. In the most successful examples, students demonstrated that they had learnt from the work of others and at the same time successfully developed their own visual language.

Technical skills and awareness of the nature of particular materials continued to be a key aspect of the most accomplished work. Often the development of skills was a central consideration during the AS year enabling students to develop independently and with confidence at A2. The work of some students was really exciting and displayed an impressive level of achievement, maturity and competence. Clearly, such work was the result of many hours of conscientious effort and practice.

At the core of much of the most successful work, across a range of endorsements, was the development of drawing skills as a means of researching and investigating, and developing ideas. In some cases drawings were successfully presented as final outcomes.

A continuing problem was the tension between quality and quantity. Many students produced large quantities of work but failed to develop their ideas in sufficient depth. There is no specific guidance in the specification about an ideal quantity of work. Students should be guided by the assessment objectives and consider carefully the extent to which their initial intentions are realised through their work. Successful work often provided evidence of a coherent journey, with a genuine sense of purpose. Less successful work was often fragmented and poorly executed.

Sketchbooks and workbooks continued to be a key feature of the work of the majority of students. A smaller number chose to display their preparatory work solely on mounted sheets. Such work has become an essential means for researching and developing ideas and referencing critical/contextual work. It can reveal key aspects of a student's thinking, the starting point for their ideas, the impact of their observations and the influence of the work of others. In some cases, the quality of work produced was quite outstanding and demonstrated high levels of commitment and technical skills. Unfortunately, some sketchbooks were little more than a collection of cut and pasted images from magazines that provided little insight into students' ideas or intentions. In Photography, the workbook has become a key means of providing evidence of students' explorations into different techniques alongside studies into the work of a number of photographers.

Annotations and more extended written materials continued to be widely used across all units. At best, such material provided genuine insights into students' ideas, intentions and subject knowledge. At worst, written materials took the form of fairly superficial page fillers. Successful written materials can provide evidence of students' knowledge of subject specific

terms, the reasons for making various choices and the influence of particular works of art or design.

The use of ICT was a significant feature of work across all endorsements. The Internet enabled students to access the work of a wide range of artists, designers and craftspeople. However, teachers and lecturers need to be vigilant in monitoring the websites used, steering students away from inappropriate material. Most students used a digital camera at some point in their course. Adobe Photoshop was widely used for the development of ideas. The majority of Graphic Communication students used computers extensively in both preparatory work and final outcomes.

### ***Administration, marking and moderation***

Many moderators reported improvements in the provision of essential paperwork. In the majority of centres mark sheets were correctly completed and deadlines were met. Problems occurred in a number of centres where Candidate Record Forms (CRF) and Centre Declaration Sheets were not completed prior to the moderation visit. Detailed comments on the Candidate Record Forms (CRFs) were helpful and informative.

Preparation for moderation visits was generally good, with required samples organised as an exhibition or as a collection of folders. In some centres, labelling was very helpful and clear. Useful maps, indicating exactly where samples might be found, were particularly useful. Most centres made every effort to provide a quiet environment for moderation to take place. Many moderators commented on the warm reception they received although there were still occasions when they felt under pressure to reveal marks. General feedback was generally well received and thought to be helpful.

A better understanding of the assessment objectives resulted in more accurate marking in many centres but there was a tendency to be somewhat lenient in quite a few centres. Occasionally, problems occurred when centres awarded their top student maximum marks when a far lower mark in the high sixties was appropriate. Many teachers and lecturers commented on the value of standardisation meetings and the provision of examples of work at different levels. Unsurprisingly, erratic marking was often linked to non attendance at these meetings.

### ***Assessment Objectives***

#### ***AO1***

The ability to develop ideas in a coherent manner was a key feature of the most successful work and impacted on all four assessment objectives. Successful students provided sound evidence of learning from contextual materials but at the same time developed their own visual language. Evidence of analysis and critical understanding was provided in different ways. Written materials often gave insights into students' knowledge and understanding and the reasons for making various decisions. In less successful submissions work seemed fragmented, intentions were not always clear and connections with the work of others were often somewhat superficial.

#### ***AO2***

A well organised course, at the beginning of the AS year, often gave students a good understanding of the nature and potential of a range of materials, processes and techniques. Students were able to build on these experiences when responding to a particular idea, issue or theme as they had a range of options available to them. It was clear that many hours had been spent developing these technical skills. Students were able to review, refine and communicate their ideas with confidence. In the least successful work, basic skills of handling materials failed to be developed and made it difficult for students to successfully explore ideas and realise their intentions.

### **AO3**

The availability of digital cameras and mobile phones with cameras had a significant impact on the nature of recording. Digital images often came first in sketchbooks and were followed by drawings and colour studies. However, there were many examples of carefully observed, analytical studies, which formed the basis of other work. Some students recorded ideas and observations in written form, often making notes about particular locations, or as a means of noting aspects of colour, light and texture. Initial ideas were often recorded as a series of thumbnail sketches. In Textile Design many students presented their ideas in the form of mood boards. Evidence of reflecting on work and progress was provided both visually and in written form. In some of the least successful work students packed sketchbooks with poorly selected collections of magazine images.

### **AO4**

In AS courses there was generally less emphasis on making a personal response than at A2 as many students concentrated on honing their technical skills and strategies for developing ideas. However, in some centres, students were given free rein and were encouraged to explore a wide range of personal ideas, issues and themes from the beginning of the course. This approach was often problematic as students tended to produce somewhat superficial responses. Generally, students seemed to respond well to a limited number of starting points. This was noticeable in the work produced for externally set assignments. The linking of written and visual elements was most apparent in the Personal Investigation. In the most successful examples, careful consideration and serious intent was clearly evident. Written work enhanced and informed visual elements and provided insights into the students' knowledge and understanding.

## ***Textile Design***

### ***A2 Externally Set Assignment***

#### ***Colour and Emotion***

The work of Howard Hodgkin proved to be the most popular choice for students responding to this starting point. His paintings inspired some exciting work using bold colours. Experimentation and comprehensive research informed a considerable number of bold and colourful outcomes.

#### ***Abstract Landscapes***

In response to this starting point students tended to work freely, experimenting with a range of techniques such as machine embroidery and appliqué. Some effective developmental work was seen in sketchbooks which provided evidence of meeting all four assessment objectives. References were made, in the main, to the work of Lorraine Roy and a number of large-scale final outcomes were seen.

#### ***Innovative Quilting***

Most students worked mainly with the textile artists named in the question paper. The most successful work was produced when the students linked their personal responses with their research and used techniques suggested in the starting point.

#### ***Surplus and Discarded Materials***

Access to available material and examples of contemporary practice resulted in some exciting responses. Some students thoroughly explored a wide range of materials, often combining them in order to produce garments. Others had simply taken wrappers and glued them to a mannequin. Sketchbooks were predominantly used for developmental work.

#### ***Culture and Tradition***

This starting point appealed to students with a wide range of abilities and successful work was seen at all levels. Many responded well to the work of Bruno Basso. Many students

explored of different techniques such as stencilling, dying and batik which resulted in a number of innovative personal responses.

***Headwear***

This was a popular starting point and many references were made to the work of designers of contemporary headwear. In many cases, students looked at the sculptural nature of headwear and produced some interesting, imaginative and well-informed responses.

***Decorative Surfaces***

This starting point allowed students to fully explore the possibilities of decorative surfaces. Gustav Klimt was the most popular artist used for research. In the more successful work students made good use of their explorations into the nature of materials to develop a personal outcome. However, less able students simply created pastiches of Gustav Klimt's work.

***Art Nouveau Influences***

Decorative features and pattern were widely seen. Some students produced lively printed fabrics. There were many examples of the effective use of ICT when exploring and developing ideas which was evident in sketchbooks and also on mounted sheets.
