নিচের লেখাটি বাংলায় অনুবাদ করো:

For many years, scientists have noticed that the earth is getting warmer and winters are not as severe as they used to be fifty years ago. At first they were puzzled by this phenomenon. They did not know exactly what caused this change. However, from their research most of them now say that it is man-made. All over the world, people are burning a great deal of fuel to generate electricity and for driving cars, rail engines, aircraft etc. As a result, millions of tons of carbon dioxide are produced every year. This carbon dioxide then forms a thick layer over the atmosphere. In turn, this layer prevents the atmospheric heat from being released into space. Consequently, the earth's atmosphere is getting warmer every day. This then melts the ice on the earth's surface, raises the sea level and causes severe drought in some areas: for example, in Africa.
