

# Mark Scheme (Final) January 2009

**GCE** 

GCE Biology (6106/03)

## **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

| Question<br>Number | Answer  | Mark |
|--------------------|---|------|
| 1(a)               | <ol> <li>correct ref to depolarisation / change in<br/>membrane potential / change from -ve to +ve /<br/>inside becomes +ve;</li> </ol>   |      |
|                    | 2. due to {influx / eq} of sodium ions ;  | (2)  |
|                    | Comment 'the membrane is depolarised as sodium ions move in' gains both mark points   |      |
|                    | (chemical substance) released by presynaptic neurone /eq;   |      |
|                    | Comment ACCEPT 'from presynaptic membrane' or 'from synaptic knob', 'from vesicles', 'released into synaptic cleft', 'in vesicles'  |      |
|                    | <ol> <li>diffuses across {synaptic cleft / eq} / attaches to<br/>{receptor / postsynaptic membrane / eq} /<br/>affects activity of postsynaptic cell / ref to post-<br/>synaptic potential / eq;</li> </ol> | (2)  |

| Question<br>Number | Answer   | Mark |
|--------------------|--|------|
| 1(b)               | ref to proportional relationship;  |      |
|                    | Comment<br>ACCEPT 'linear relationship'  |      |
|                    | <ol> <li>credit a suitable quantitative comment (e.g. 'as axon diameter increases from 2 to 14, the conduction velocity increases by 67 m sec<sup>-1</sup>');</li> </ol> | (2)  |

| Question<br>Number | Answer   | Mark |
|--------------------|--|------|
| 1(c)               | <ol> <li>conduction of nerve impulses would {stop / slow down}/ eq;</li> <li>active transport stops / eq;</li> </ol> |      |
|                    | Comment ACCEPT 'sodium pumps no longer work'   |      |
|                    | <ol> <li>(ion / named e.g. of ion) gradients not maintained / eq;</li> </ol>   |      |
|                    | <ol> <li>(because) sodium <u>and</u> potassium ions not re-<br/>exchanged /eq;</li> </ol>                            | (3)  |

| Question<br>Number | Answer   | Mark |
|--------------------|--|------|
| 2(a)(i)            | 1. some light is reflected (by the leaf) / eq;   |      |
|                    | <ol><li>some will {be transmitted / not absorbed /eq};</li></ol>                         |      |
|                    | 3. some inappropriate wavelength / eq;   |      |
|                    | 4. inefficiency of photosynthesis /eq;   |      |
|                    | 5. light energy used to evaporate water / eq;  |      |
|                    | <ol><li>ref to saturation of chlorophyll with light (at high light intensity);</li></ol> | (3)  |

| Question<br>Number | Answer  | Mark |
|--------------------|---|------|
| 2(a)(ii)           | 2000 <u>kJ m<sup>-2</sup> yr<sup>-1</sup></u> ; | (1)  |
|                    | Comment Expect correct units for the mark       |      |

| Question<br>Number | Answer                       | Mark |
|--------------------|------------------------------|------|
| 2(a)(iii)          | appropriate calculation ;    |      |
|                    | (e.g. 8000 ÷ 1000 000 × 100) |      |
|                    | 0.8 (%);                     | (2)  |

| Question<br>Number | Answer  | Mark |
|--------------------|---|------|
| 2(b)(i)            | overall {greater / faster / eq} (growth) on diet containing maltose (or converse for glucose) /eq;          |      |
|                    | <ol> <li>little difference up to 12 days / greater<br/>difference from 12 to 18 days /eq;</li> </ol>        |      |
|                    | 3. manipulated quantitative comparison ;  | (2)  |
|                    | e.g.  |      |
|                    | 'mean mass when fed on diet containing maltose is 110 mg higher than on diet containing glucose at 18 days' |      |
|                    | 'increase in mass on maltose diet is 535 g, but 425 g on glucose diet'                                      |      |
|                    | 'mass of locusts on maltose diet is 24% higher (than those on glucose diet) at 18 days'                     |      |

| Question<br>Number | Answer  | Mark |
|--------------------|---|------|
| 2(b)(ii)           | <ol> <li>ref to use (as substrates) for respiration / used to produce ATP;</li> </ol>                           |      |
|                    | Comment IGNORE 'used to produce energy'   |      |
|                    | <ol><li>ref to energy for flight / movement / active transport / growth / eq ;</li></ol>                        |      |
|                    | <ol> <li>ref to synthesis of{new substances / named example (amino acids / lipids / chitin / etc.)};</li> </ol> |      |
|                    | 4. conversion to storage compounds / eq;  | (2)  |

| Question<br>Number | Answer   | Mark |
|--------------------|--|------|
| 2(c)               | <ol> <li>biopesticides are specific to locusts / no harm to<br/>non-target species / eq;</li> </ol>  |      |
|                    | 2. locusts are unlikely to become <u>resistant</u> ;   |      |
|                    | <ol> <li>biopesticide may only need to be applied once /<br/>self sustaining idea / eq;</li> </ol>   |      |
|                    | <ol> <li>no bioaccumulation / no harmful residues in crops<br/>/ ref to {persistence / stability} of chemical<br/>insecticides;</li> </ol> |      |
|                    | 5. ref to no resurgence / eq ;   | (4)  |
|                    | Comments ACCEPT converse points related to chemical insecticides IGNORE refs to cost and vague refs to 'harm to the environment'           |      |

# Quick guide to the scientific content mark

| AS content                                       | A2 content  | S mark |
|--|---|--------|
| No relevant or accu                              | 0   |        |
| Very few correct facts                           |   | 1      |
| Some correct facts                               | Little or no relevant A2 content                      | 3      |
| Generally accurate AS content                    | Some A2 content, but lacks depth and accurate details | 5      |
| Generally accurate AS content                    | Average A2 content                                    | 7      |
| Accurate and relevant AS content must be present | Good A2 content                                       | 9      |
| Accurate and relevant AS content must be present | Excellent A2 content                                  | 11     |

| AS content ONLY | S = 3 max |
|-----------------|-----------|
| A2 content ONLY | S = 7 max |

#### **ESSAY MARK SCHEME**

Outline scheme for marking essay questions 3, 4B and 5H

11 available for Scientific content (S)

2 available for Balance (B)

2 available for Coherence (C)

Total maximum mark available: 15

### Scientific content (S)

| Scientific content (S)  | Description   |
|-------------------------|---|
| 11<br>(good)            | The essay demonstrates a sound understanding of the topic and contains a significant amount of material from most areas of the mark scheme, including A2 content.  Suitable examples are included and the candidate has clearly and coherently linked together information from different parts of the specification. |
| 9<br>(above<br>average) | An above average essay, with accurate content. The essay includes a good balance of material from several areas of the mark scheme, including A2 content, and examples where appropriate.  There may be some minor factual errors.  |
| 7<br>(average)          | The essay includes relevant information from some areas of the mark scheme, including A2 content. The candidate links together some facts and principles.  Some examples are included.  There may be some minor factual errors.   |
| 5<br>(below<br>average) | The essay includes some generally factually accurate and relevant material, and there is some attempt to link material from more than one area of the mark scheme. The A2 content, in particular, lacks depth and accurate details.   |
| 3<br>(poor)             | There are some correct facts, but the essay lacks depth and accuracy. The essay contains little or no relevant information from the A2 content.   |
| 1<br>(poor)             | There are very few correct facts. The essay is generally superficial and inaccurate.  |
| 0<br>(poor)             | No correct or relevant material is included.  |

Note: If a scientific content mark of 0, 1, or 3 is awarded, it is very unlikely that a balance mark of more than 1 is appropriate.

An essay containing AS content only can be awarded a max of 3 for scientific content.

An essay containing A2 content only can be awarded a max of 7 for scientific content.

S = 11 marks

#### Balance (B)

- 2 Most of the main topic areas outlined are covered
  Some discussion of each of the areas chosen, illustrated with suitable examples
  where appropriate
  Material included is all relevant to the topic and the candidate has linked
  information from more than one area of the specification.
  Few, if any, errors
- Some of the main topic areas outlined are covered.
  Some discussion of each of the areas chosen.
  Some irrelevant material included.
  There are some examples which link together different areas of the specification. Some errors.
- Very limited account, possibly only one aspect chosen
   Material mostly irrelevant
   No examples of the candidate linking information from different topics
   Large number of errors

B = 2 marks

#### Coherence (C)

- 2 Material logically presented, with little or no repetition
  Essay has coherence, ideas are developed well; continuous prose used throughout
  Essay has an introduction and a conclusion, summing up the main points Technical terms have been used correctly
  Spelling, punctuation and grammar are sound
- Material is presented in an orderly way and some ideas developed Continuous prose used throughout
  The introduction and conclusion may be present, but brief
  Technical terms are used and generally in the correct context
  Spelling, punctuation and grammar are generally sound
- O Essay style not used

  Material in note form or numbered points

  Very poor standard of spelling, punctuation and grammar

C = 2 marks

| Question<br>Number | Answer  | Mark                |
|--------------------|---|---------------------|
| 3                  | Introduction could include overview of DNA, RNA and the genetic code -                              |                     |
|                    | Basic structure of a mononucleotide -   |                     |
|                    | Phosphate, pentose and base -   |                     |
|                    | Purine and pyrimidine bases -   |                     |
|                    | Formation of a polynucleotide -   |                     |
|                    | Complementary base pairing-   |                     |
|                    | the double helix -  |                     |
|                    | Base sequence and the genetic code -  | Scientific          |
|                    | Point mutation defined -  | content<br>11 marks |
|                    | Specific reference to <u>effect</u> of point mutation on the genetic code and amino acid sequence - | Balance 2<br>marks  |
|                    | Frame shift -   | Coherence 2 marks   |
|                    | Specific reference to sickle cell anaemia -   | marks               |
|                    | Credit other examples of point mutations e.g. PKU -   | (15)                |

| Question<br>Number | Answer   | Mark                              |
|--------------------|--|-----------------------------------|
| 4B                 | Introduction could include reference to the properties of water (Unit 1) - |                                   |
|                    | Uptake and transport of water -  |                                   |
|                    | Symplast, apoplast and vacuolar pathways -                                 |                                   |
|                    | Role of the endodermis and the Casparian strip -                           |                                   |
|                    | Transport in xylem -   |                                   |
|                    | Cohesion-tension theory -  |                                   |
|                    | The transpiration stream -   |                                   |
|                    | Water as a solvent for the uptake and transport of mineral ions -          |                                   |
|                    | Reference to phosphate, nitrate and magnesium ions -                       |                                   |
|                    | Water as a solvent for transport of organic solutes in phloem -            | Scientific<br>content<br>11 marks |
|                    | Water in the light-dependent reactions of photosynthesis -                 | Balance<br>2 marks                |
|                    | Evaporative cooling -  | Coherence                         |
|                    | Changes in turgor and stomatal mechanisms -                                | 2 marks                           |
|                    | Turgor and support -   | (15)                              |

| Question<br>Number | Answer   | Mark                 |
|--------------------|--|----------------------|
| 5H                 | introduction could include a reference to the growth of human populations and outline of desertification - factors affecting growth of human populations - variations in fertility - birth rates - death rates - |                      |
|                    | growth curves and population pyramids -  |                      |
|                    | implications of world population trends -  |                      |
|                    | causes of desertification -  |                      |
|                    | climatic factors -   | Scientific           |
|                    | human population pressures -   | content<br>11 marks  |
|                    | effects of desertification -   | Balance<br>2 marks   |
|                    | soil erosion -   |                      |
|                    | salinisation -   | Coherence<br>2 marks |
|                    | reduction of biodiversity -  | (15)                 |
