RECOGNISIN	G ACHIEVEMENT						
ADVANCED SUBSIDIARY GCE BIOLOGY			2803/03/PLAN				
Practic	al Examination 1 (Part A – Planning Exercise)						
For iss	ue on or after: 17 NOVEMBER 2007						
Candidate Forename	Candidate Surname						
			<u> </u>				
Centre Number	Candidate Number						
TIME This Plan must be handed in by the deadline given by your teacher.							
INSTRUCTIONS TO CANDIDATES							
 Write your name, Centre Number and Candidate Number in the boxes above. Attach this booklet to the front of your Plan. 							
INFORMATION FOR CANDIDATES							
 In this Planning Exercise, you will be assessed on the Experimental and Investigative Skill: Skill P: Planning 							
You will be awarded marks for the quality of your written communication.Detailed notes for guidance are given overleaf.							
Authenticatio	n by teacher	ha candida	to concorn	od Lbovo			
provided details on my Report Form for the Practical Test of any assistance given.							
Signature Date			FOR EXAMINER'S USE				
		Qu.	Max.	Mark			
		Planning	16				
		<u> </u>					

This document consists of 4 printed pages.

Notes for guidance

- 1 Your Plan should have a clear and helpful structure and should be illustrated by diagrams, tables, charts, graphs etc. as appropriate. Remember that these can often be used to replace words in the text. Diagrams should be relevant to the content of your Plan and positioned appropriately. Labels on diagrams, flow charts or tables should be clear and concise. Large blocks of text should be included in the word count.
- 2 You should take care to use technical and scientific terms correctly and to write in clear and correct English.
- 3 Your Plan should be handwritten or word-processed on A4 paper, which should have a hole punched at the top left-hand corner. Pages should be numbered and should have a clear margin on the right hand side. You must write (or print) on one side of the paper only and each sheet should be marked with your Centre Number and Candidate Number.
- 4 You should show that you have consulted an appropriate range and variety of sources. At the end of your Plan you should list clearly the sources you have used. You should refer to these references in your Plan where appropriate. Where you have incorporated material which has been copied directly from a source such as a book or the Internet, this must be acknowledged in your Plan and details included in the references at the end. However, it should be noted that the inclusion of copied material will not in itself gain credit. The list of references should not be included in the word count.
- 5 Your Plan should be based on the use of standard equipment, apparatus, chemicals and other materials available in a school or college science laboratory.
- 6 Your Plan should be between 500 and 1000 words. A Plan that is in excess of 1000 words is likely to have poor structure and unselective choice of material, so that full credit may not be available. You should indicate the number of words in the margin of the Plan at approximately 200 word intervals.
- 7 When you have finished, tie the pages together **loosely** (or use a treasury tag), with this booklet on the top, so that the pages turn over freely. Your Centre will give you the date by which your Plan must be handed in.

NOTICE TO CANDIDATE

The work you submit for assessment must be your own.

If you copy from someone else or allow another candidate to copy from you, or if you cheat in any other way, you may be disqualified from at least the subject concerned.

- 1 Any help or information you have received from people other than you subject teacher(s) must be clearly identified in the work itself.
- 2 Any books, information leaflets or other material (e.g. videos, software packages or information from the Internet) which you have used to help you complete this work must be clearly acknowledged in the work itself. To present material copied from books or other sources without acknowledgement will be regarded as deliberate deception.

Declaration by candidate

I have read and understood the **Notice to Candidate** (above). I have produced the work without any help from other people apart from that which I have declared in the work itself. I have acknowledged all source materials in the work itself.

Candidate's signature: Date:

Planning Exercise

In this Planning Exercise, two marks are available for the quality of your written communication.

This Planning Exercise is about the conversion of starch to sugar in bananas as they ripen.

Bananas are a favourite food of endurance athletes because they have a high carbohydrate content. Banana cells contain starch grains, which are composed of amylose and amylopectin. Most of the carbohydrate in an unripe banana is starch. The sugar content of bananas increases during ripening as starch is broken down by enzymes. The relationship between starch and sugar may be important to athletes. If they want a quick supply of sugar, then it is better to eat a ripe banana that has a high sugar content. If they want a slower release of sugar, then they could eat a banana that has a high starch content.

You are required to plan an investigation to find the effect of temperature on the ripening of bananas, as measured by the conversion of starch to sugar.

Starch grains may be observed using a microscope by smearing the surface of a cut banana across a microscope slide then staining and viewing the smear at low and high power. Starch grains may also be isolated from homogenised cells and their quantity determined. There are several ways in which the quantity of sugar in foods, such as bananas, may be determined.

Your planning must be based on the assumption that you are provided with the following:

- a supply of bananas
- reagents for testing for starch and sugar
- school or college laboratory resources.

Give full details in your Plan to include:

- the apparatus and materials to be used
- a detailed method to include procedures that you would adopt to ensure that the results obtained would be as precise and reliable as possible
- a risk assessment and safety precautions.

Indicate briefly how you would present and analyse your data to draw your conclusions.

You are strongly recommended to consult the descriptors for Skill P as given in Appendix C of the Biology Specification.
