## CAMBRIDGE INTERNATIONAL EXAMINATIONS GCE Advanced Level

## MARK SCHEME for the May/June 2014 series

## 9701 CHEMISTRY

9701/41

Paper 4 (Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

| Pa  | ge 2 | 2                |  | Mark Scheme   | Syllabus                          | Paper    |
|-----|------|------------------|--|---|-----------------------------------|----------|
|     |      |                  | GCE A  | LEVEL – May/June 2014   | 9701                              | 41       |
|     |      |                  |  | Section A   |                                   |          |
| (a) | (i)  | •                | • , ,  | e(r)/greater (for iron)<br>rge(r)/greater (for iron)  |                                   | [1<br>[1 |
|     | (ii) | stron            | ner m. pt. due to)<br>ng attraction betw<br>e delocalised elec | een cations and electrons or  |                                   | [1       |
|     |      | (high            | ner density due to   | ) greater A <sub>r</sub> <b>and</b> smaller radius  |                                   | [1       |
| (b) | (i)  |                  | ponents to be ad<br>oridge [ <u>must be</u> l                  | ded: voltmeter <i>or</i> <b>V</b><br>abelled]   |                                   | [1<br>[1 |
|     | (ii) | M1:<br>M2:<br>M3 | A and B<br>either C or D<br>C and D                            | copper (metal) or Cu <b>and</b> iron (r as 1 mol dm <sup>-3</sup> /1 M $Cu^{2+}$ or CuSO <sub>4</sub> or CuC $l_2$ or Cu (I | ,                                 | [1<br>[1 |
|     |      | 1410             | C and D  | Fe <sup>2+</sup> or FeSO <sub>4</sub> etc.  | 10 <sub>3/2</sub> 010. <b>und</b> | [′       |

(iii)  $E_{cell}^{\circ} = 0.34 + 0.44 = 0.78 \text{ (V)}$ 

(iv) if **C** is Fe<sup>2+</sup>; (as [**C**] increases), the *E* of the Fe<sup>2+</sup>/Fe increases/becomes more positive/less negative [1]

so the overall cell potential/ $E_{cell}$  would **decrease/become less positive/more negative** [1]

or

if  ${\bf C}$  is  $Cu^{2^+}$ ; (as  $[{\bf C}]$  increases), the E of the  $Cu^{2^+}/Cu$  increases/becomes more positive/less negative [1]

so the overall cell potential/E<sub>cell</sub> would **increase/become more positive/less negative**[1]

(c) (i) (colour change is) colourless to pink/pale purple or (end point is the first) permanent (pale) pink/pale purple colour [1]

(ii) 
$${n(MnO_4^-) = 0.02 \times 18.1/1000 = 3.62 \times 10^{-4} \text{ mol}}$$
  
 $n(Fe^{2^+}) = 5 \times n(MnO_4^-) = 1.81 \times 10^{-3} \text{ mol}}$  [1]

mass of Fe = 
$$55.8 \times 1.81 \times 10^{-3} = 0.101 \text{ g} (M2 \times 55.8) \text{ ecf}$$
 [1]

$$M_{\rm r} = {\rm mass/moles} = 0.500/1.81 \times 10^{-3} = {\bf 276.2} \text{ ecf}$$
 [1]

[Total: 16]

**2** (a) (i) A *complex* is a compound/molecule/species/ion formed by a central metal atom/ion surrounded by/bonded to one or more ligands/groups/molecules/anions [1]

A *ligand* is a species that contains a **lone pair** of electrons that forms a **dative bond** to a metal atom/ion/or a lone pair donor to metal atom/ion [1]

| Page 3 | Mark Scheme                 | Syllabus | Paper |
|--------|-----------------------------|----------|-------|
|        | GCE A LEVEL – May/June 2014 | 9701     | 41    |

(ii)

$$\begin{bmatrix} H_2O \\ H_2O \\ H_2O \end{bmatrix} O H_2$$
 and 
$$\begin{bmatrix} CI \\ H_2O \end{bmatrix}$$

correct 3D structures: octahedral and tetrahedral

[1] + [1] [1]

(iii)

$$CI_{M_{1},...}$$
  $Pt$   $NH_{3}$   $Or$   $H_{3}N$   $Pt$   $CI$   $NH_{3}$   $NH_{3}$ 

 $\begin{array}{c|c} \text{CI}_{M_{M_{1}}} & \text{NH}_{3} \\ \text{H}_{3} \text{N} & \text{CI} & \text{CI} & \text{Pt} \\ \text{NH}_{3} \end{array}$ 

both structures [1] geometric or cis-trans [1]

(b) (i) 
$$Cu(II)$$
 is [Ar]  $3d^9$  [1]  $Cu(I)$  is [Ar]  $3d^{10}$  [1]

(ii) Cu(II): d orbitals/subshell are split (in ligand field) and

electron moves from lower to upper orbital  $\it or$  an electron is promoted/excited

in doing so it **absorbs** a photon/light

[2]

Cu(I): no gap in upper orbital/all orbitals are full

[1]

(c) (i) 
$$\Delta H^{e} = +2 \times 33.2 - 157.3 + 302.9 = (+) 212 \text{ kJ mol}^{-1} \text{ ecf}$$
 [2]

(ii) 
$$\Delta H^{\text{e}} = -168.6 + 2 \times 157.3 = (+)146 \text{ kJ mol}^{-1}$$
 allow ecf from (c)(i) [1] high T/temperature since  $\Delta H$  is positive/endothermic [1]

[Total: 16]

3 (a) heat in dilute 
$$HCl(aq)$$
 (or  $H_2SO_4(aq)$ ) [1]

| Page 4 | Mark Scheme                 | Syllabus | Paper |
|--------|-----------------------------|----------|-------|
|        | GCE A LEVEL – May/June 2014 | 9701     | 41    |

(ii) must be skeletal

(iii)  $CO_2H$   $+ CO_2 \text{ or } HO_2C-CO_2H$  [1]

(c) (i) 
$$K_{w} = [H^{+}][OH^{-}]$$
 [1]

- (ii) In  $0.15 \,\text{mol dm}^{-3} \,\text{NaOH}$ ,  $[OH^{-}] = 0.15 \,\text{mol dm}^{-3}$   $[H^{+}] = K_{\text{w}}/[OH^{-}]$ , so  $[H^{+}] = 1 \times 10^{-14}/0.15 = 6.67 \times 10^{-14} \,\text{mol dm}^{-3}$  [1]  $pH = -\log_{10}[H^{+}] = 13.18 \,(13.2) \,\text{ecf from } [H^{+}]$  [1]
- (iii) piperidine is a poorer proton acceptor or piperidine is partially ionised [1]
- (iv) piperidine should be a **stronger base/more basic** than ammonia because of the electron-donating (alkyl/CH<sub>2</sub>) groups [1]
- (d) (i) n(HCl) at start =  $0.1 \times 20/1000 = 2.0 \times 10^{-3} \text{ mol}$  n(HCl) at finish =  $2 \times 10^{-3} - 1.5 \times 10^{-3} = 0.0005/5 \times 10^{-4} \text{ mol}$  [1]
  - (ii) this is in 30 cm<sup>3</sup> of solution, so [HC] at finish =  $0.5 \times 10^{-3}/0.030 = 1.67 \times 10^{-2} \text{ mol dm}^{-3}$ pH =  $-\log_{10}(1.67 \times 10^{-2}) = 1.78$  ecf from (d)(i) [1]
  - (iii) pH/vol curve: start at pH 11.9 [1] vertical portion at V = 15 cm<sup>3</sup> [1] levels off at pH 1.8
  - (iv) indicator is B [1]

[Total: 16]

[1]

4 (a) three from phenol (secondary) alcohol

(primary) amine arene/aryl/benzene

3 × [1]

| Page 5 | Mark Scheme                 | Syllabus | Paper |
|--------|-----------------------------|----------|-------|
|        | GCE A LEVEL – May/June 2014 | 9701     | 41    |

(b) (i)

Compound 
$${\bf Z}$$
 is

step 1: HCN + NaCN or HCN + base [1]

step 2: 
$$H_2$$
 + Ni or LiA $lH_4$  or Na + ethanol [1]

(ii) bromine decolourises *or* goes from orange to colourless *or* white ppt. formed [1]

e.g.

HO
CHO
2 or 3 bromines in ring
Br

[1]

(c)

(i) 
$$N_{AO}$$
  $N_{AO}$   $N_{AO}$ 

(ii) 
$$\stackrel{\text{HO}}{\underset{\text{HO}}{\bigvee}} \stackrel{\text{OH}}{\underset{\text{NH}_3}{\bigvee}}$$
 (or ionic) [1]

M1: amide [1]
M2: alcoholic ester [1]
M3: both phenolic esters [1]

[5] max [4]

(d) amide [1] ester

[Total: 14]

[1]

| Page 6 | Mark Scheme                 | Syllabus | Paper |
|--------|-----------------------------|----------|-------|
|        | GCE A LEVEL – May/June 2014 | 9701     | 41    |

- **5** (a) (i) –OH *or* hydroxyl groups (allow alcohol groups) [1]
  - (ii) alkenes or C=C (double) bonds or carbon double bonds [1]
  - (iii) CH<sub>3</sub>CH(OH) or CH<sub>3</sub>CO- groups [1]
  - (b) V is  $CH_3CH(OH)CH=CH_2$  [1]

(c) compound V shows optical isomerism

(ecf for 'geometric(al)' if candidate's V is capable of cis-trans) [1]

$$H_2C$$
  $CH_3$   $H_2C$   $CH_3$   $HO$   $CH$   $CH$   $CH$   $CH$   $CH$   $CH$ 

[Total: 8]

|--------|-----------------------------|----------|-------|
|        | GCE A LEVEL – May/June 2014 | 9701     | 41    |

6 (a)

| feature                      | level of bonding |
|------------------------------|------------------|
| formation of α-helix         | secondary        |
| formation of disulfide bonds | tertiary         |
| formation of ionic bonds     | tertiary         |
| linking amino acids          | primary          |

[3]

(b)

| block letter | name        |
|--------------|-------------|
| J            | Deoxyribose |
| К            | Cytosine    |
| L            | Phosphate   |
| М            | Thymine     |

4 × [1]

(c) (i) H/hydrogen (bonds between bases)

[1]

(ii) Bonds are weak **and** so require relatively little energy to break/are easily broken

[1]

(d)

| (sugar, <b>J</b> ) |             | (base, M) |  |
|--------------------|-------------|-----------|--|
| DNA                | deoxyribose | thymine/T |  |
| RNA                | ribose      | uracil/U  |  |

[1]

[1]

[Total: 10]

7 (a) Expression: 
$$n = \frac{100 \times 2.5}{1.1 \times 74}$$
 or equivalent [1]

n = 3.1 hence **G** has three carbon atoms

(b) (i)  $(\delta 1.1)$  RCH<sub>3</sub> or RCH<sub>2</sub>R or methyl or CH<sub>3</sub>

( $\delta$  2.2) (R)CH<sub>2</sub>CO(R) or CH<sub>3</sub>CO(R)

( $\delta$  11.8) (R)COOH or (R)CONH(R)

 $3 \times [1]$
