

RECOGNISING ACHIEVEMENT

How FAR, How FAST?

**Mark Scheme 2613/01
June 2001**

Question	Expected Answers	Marks
1 (a) (i)	<p>the enthalpy change when <u>1 mole</u> (in words) of compound/substance ✓ [N.B. NOT element in its standard state, and NOT 1 mol of elements, if a compound is being made] (is formed from its) <u>elements</u> under standard conditions or at 100 kPa and a stated temperature or at room temperature and pressure } ✓</p>	[2]
(ii)	<p>$H_2(g) + \frac{1}{2}O_2(g) \longrightarrow H_2O(l)$ <i>balanced for 1 mole of water</i> ✓ <i>state symbols (u/c - anything on left, but has to be H₂O(l) on RHS)</i> ✓</p>	[2]
(b)	<p>$x - 75 - 2(286) = -394$ [$x = 75 + 572 - 394$] (x 2) ✓ (correct +/- signs) ✓ $x = (+)253 \text{ (kJ mol}^{-1}\text{)}$ ✓ecf correct ans ⇒ [3] marks. Award [2] for any of the following: -33, +103, -253, -891, +1041 Award [1] for any of the following: +33, -183, -605, +755, -1041</p>	[3]
(c)(i)	<p style="text-align: center;">progress of reaction</p> <p>look for: ΔH shown as exothermic or -92 kJ mol^{-1} ✓ E_{act} or 68 kJ mol^{-1} from reactants to trans. state ✓ product labelled correctly after transition state ✓</p>	[3]
(ii)	<p>$92 + 68 = 160 \text{ (kJ mol}^{-1}\text{)}$ ✓ (no ecf)</p>	[1]
		total 11

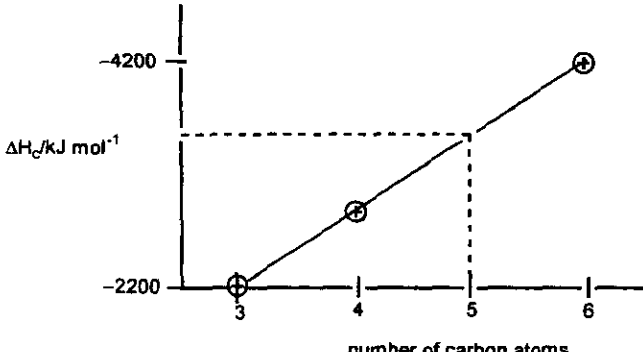

Question	Expected Answers	Marks
2 (a)	$\text{C}_6\text{H}_6(\text{l}) + 7\frac{1}{2}\text{O}_2(\text{g}) \rightarrow 6\text{CO}_2(\text{g}) + 3\text{H}_2\text{O}(\text{l})$ (or 15/2) Correct formulae and state symbols ✓ balanced for 1 mole of C₆H₆ ✓	[2]
* (b)	$x - 3267 = 3(-1301)$ $x = -636 \text{ (kJ mol}^{-1}\text{)}$ (x 3) ✓ (correct +/- signs) ✓ ✓ecf correct ans ⇒ [3] marks. Award [2] for any of the following: +636, +1966, ±7170, +665 Award [1] for any of the following: -1966, ±4568, -665 If no other mark has been awarded, you could award [1] for 3 x (-)1301	[3]
* (c) (i)	(rate) increases ✓ more molecules have $E > E_a$ or enough energy to react (at higher T) ✓ collision rate increases (with T) or there are more (effective) collisions ✓ N.B. there is no mark for "molecules go faster/have more energy"	[3]
(ii)	(rate) increases ✓ (because they are closer together) molecules collide more often ✓ or more collisions or more molecules in contact with the catalyst ✓ N.B. no mark for molecules go faster/have more energy	[2]
* (d)	it's a catalyst or it speeds up the reaction ✓ by <u>lowering E_{act}</u> or providing alternative route with <u>lower energy</u> ✓ or adsorbs/forms (temporary) bonds with the reagents ✓ N.B. no mark for "provides surface" or "extra surface area"	[2]
		total 12

Question	Expected Answers	Marks
3 (a)	<ul style="list-style-type: none"> • forward rate = reverse rate (<i>not</i> concentration of reactants and products are equal) • can be approached from either direction or reversible reaction or (constant) change from reactants to products and vice versa • no change in overall macroscopic properties (or one specified property, e.g. colour/concentration) or <u>appears</u> to have stopped • takes place in a closed system (any two bullet points) ✓✓ 	[2]
(b)	<p>a change in conditions or a disturbance will cause a shift in the (position of) <u>equilibrium</u> ✓</p> <p>in the direction that minimises/opposes/reduces/attempts to balance out/ the effect of the change ✓</p> <p><i>N.B. do not accept "cancels" or "equals" or "balances" or "restores" without the "attempt"</i></p>	[2]
(c)	<p>solution would turn <u>yellow</u> (allow yellow-green) ✓</p> <p>(do not allow this mark if candidate says it goes yellow and then back to green again!)</p> <p>(increasing/added [H⁺] pushes) the <u>equilibrium</u> to left hand side or <u>equilibrium</u> shifts to form more HI_n ecf ✓</p> <p><i>ecf: if candidate states that the colour goes blue, then the first mark is lost, but the second can be awarded for stating that the eqm. goes to the right</i></p>	[2]
(d)	<p>(colour goes from yellow to) <u>green</u> u/c ✓</p> <p>then to <u>blue</u> (allow blue-green) ✓</p> <p>(do not allow this mark if candidate says it goes blue and then back to green again!)</p> <p><i>N.B. allow e.c.f. for both these marks as follows:</i></p> <p><i>if candidate has said in (c) that colour goes blue, then these two marks are for (blue to) green [1]; and yellow(-green) [1] (don't allow "blue" in both!)</i></p>	
	<p>OH⁻ reacts with/removes H⁺ (or equation) or is a proton acceptor or neutralises the acid ✓</p> <p><i>N.B. not just "OH⁻ is a base"</i></p> <p>shifting the <u>equilibrium</u> to the right hand side or <u>equilibrium</u> shifts to form more I_n⁻ ecf ✓</p> <p><i>(the word "equilibrium" need only appear once in parts (c) and (d). If it is omitted from both (c) and (d), deduct [1] only. If it is omitted from only one part, allow full marks (as long as the chemistry is correct!))</i></p>	[4] total 10

Question	Expected Answers	Marks
2 (a)	$\text{C}_6\text{H}_6(\text{l}) + 7\frac{1}{2}\text{O}_2(\text{g}) \rightarrow 6\text{CO}_2(\text{g}) + 3\text{H}_2\text{O}(\text{l})$ (or 15/2) Correct formulae and state symbols ✓ balanced for 1 mole of C_6H_6 ✓	[2]
(b)	$x - 3267 = 3(-1301)$ (x 3) ✓ (correct +/- signs) ✓ $x = -636 \text{ (kJ mol}^{-1}\text{)}$ ✓ecf correct ans \Rightarrow [3] marks. Award [2] for any of the following: +636, +1966, ± 7170 , +665 Award [1] for any of the following: -1966, ± 4568 , -665 * If no other mark has been awarded, you could award [1] for 3 x (-)1301	[3]
(c) (i)	(rate) increases ✓ more molecules have $E > E_a$ or enough energy to react (at higher T) ✓ collision rate increases (with T) or there are more (effective) collisions ✓ N.B. there is no mark for "molecules go faster/have more energy"	[3]
(ii)	(rate) increases ✓ (because they are closer together) molecules collide more often ✓ or more collisions or more molecules in contact with the catalyst ✓ N.B. no mark for molecules go faster/have more energy	[2]
(d)	it's a catalyst or it speeds up the reaction ✓ by lowering E_{act} or providing alternative route with lower energy ✓ or adsorbs/forms (temporary) bonds with the reagents ✓ N.B. no mark for "provides surface" or "extra surface area"	[2]
		total 12

Question	Expected Answers	Marks
3 (a)	<ul style="list-style-type: none"> • forward rate = reverse rate (<i>not concentration of reactants and products are equal</i>) • can be approached from either direction or reversible reaction or (constant) change from reactants to products and vice versa • no change in overall macroscopic properties (or one specified property, e.g. colour/concentration) or <u>appears</u> to have stopped • takes place in a closed system (any two bullet points) ✓✓ 	[2]
(b)	<p>a change in conditions or a disturbance will cause a shift in the (position of) <u>equilibrium</u> ✓</p> <p>in the direction that minimises/opposes/reduces/attempts to balance out/ the effect of the change ✓</p> <p><i>N.B. do not accept "cancels" or "equals" or "balances" or "restores" without the "attempt"</i></p>	[2]
(c)	<p>solution would turn <u>yellow</u> (allow yellow-green) ✓ (do not allow this mark if candidate says it goes yellow and then back to green again!)</p> <p>(increasing/added [H⁺] pushes) the <u>equilibrium</u> to left hand side or <u>equilibrium</u> shifts to form more HI ecf ✓ <i>ecf: if candidate states that the colour goes blue, then the first mark is lost, but the second can be awarded for stating that the eqm. goes to the right</i></p>	[2]
(d)	<p>(colour goes from yellow to) <u>green</u> u/c ✓ then to <u>blue</u> (allow blue-green) ✓ (do not allow this mark if candidate says it goes blue and then back to green again!)</p> <p><i>N.B. allow e.c.f. for both these marks as follows: if candidate has said in (c) that colour goes blue, then these two marks are for (blue to) green [1]; and yellow(-green) [1] (don't allow "blue" in both!)</i></p>	
*	<p>OH⁻ reacts with/removes H⁺ (or equation) or is a proton acceptor or neutralises the acid ✓</p> <p><i>N.B. not just "OH⁻ is a base"</i></p> <p>shifting the <u>equilibrium</u> to the right hand side or <u>equilibrium</u> shifts to form more I⁻ ecf ✓</p>	[4]
*	<p>(the word "equilibrium" need only appear once in parts (c) and (d). If it is omitted from both (c) and (d), deduct [1] only. If it is omitted from only one part, allow full marks (as long as the chemistry is correct!))</p>	total 10

Question	Expected Answers	Marks
4 (a)	<p>a strong acid is completely ionised/dissociated (to H⁺(aq)) or gives 1 mol of H⁺(aq) for each 1 mol of HA ✓</p> <p>a weak acid is incompletely ionised/dissociated (NOT unionised) or gives less than 1 mol of H⁺(aq) for each 1 mol of HA ✓</p> <p><i>N.B. if neither of the above two marks can be awarded, you can award [1] for the statement that "strong acids donate protons/H⁺ more readily than weak acids"</i></p>	[2] [1]
(b) (i)	<p>CaCO₃ + 2HA → CaA₂ + H₂O + CO₂ ✓</p> <p>or</p> <p>CaCO₃ + 2H⁺ → Ca²⁺ + H₂O + CO₂</p> <p>or</p> <p>CO₃²⁻ + 2H⁺ → H₂O + CO₂</p>	
(ii)	<ul style="list-style-type: none"> • (average) energy/speed/movement of <u>molecules/particles</u> increases with temperature • more (molecules) have E > E_a (at higher T) or have enough energy to react <i>N.B. do not allow this point if candidate has stated that the E_a decreases with temperature</i> • activation energy is the minimum energy molecules need in order to react • collision rate or number of collisions increases (with T) <p style="text-align: right;"><i>(any three bullet points) ✓✓✓</i></p>	
	<p><i>N.B. the first two bullet points could be read into two labelled Boltzmann distribution curves, showing E_a</i></p>	
		[3] total 6

Question	Expected Answers	Marks
5 (a) (i)	<p>the energy/enthalpy/heat required to break ✓ <u>1 mole</u> of bonds <i>or</i> a bond per molecule in <u>1 mole</u> ✓ <i>N.B. do not allow "(energy needed to break the bonds in) 1 mole of compound"</i></p>	[2]
(ii)	$\frac{1}{4}\text{CH}_4(\text{g}) \longrightarrow \frac{1}{4}\text{C} + \text{H}$ (i.e. balanced for 1 mol of H) ✓✓✓	
	<p>If the above three marks cannot be awarded (this is more than likely!), allow the following:</p>	
	<p>Any equation with $\text{CH}_4(\text{g})$ on the left hand side ✓ Any equation showing the breaking of a CH bond, e.g. $\text{C} + 4\text{H}$ <i>or</i> $\text{CH}_3 + \text{H}$ on the right hand side ✓</p>	[3]
(b)	<p>total BE on left = $2(\text{C}-\text{C}) + 8(\text{C}-\text{H}) + 5(\text{O}=\text{O}) = +6488 \text{ kJ}$ ✓ total BE on right = $6(\text{C}=\text{O}) + 8(\text{O}-\text{H}) = +8542 \text{ kJ}$ ✓ <i>N.B. if neither of these two marks can be awarded, you could award [1] if all of the correct multipliers (2, 8, 5, 6, 8) have been used.</i> $\Delta\text{H} = 6488 - 8542 = -2054 \text{ (kJ mol}^{-1}\text{)}$ ✓ ecf ([3] for correct ans)</p>	[3]
	<p>(ecf: award the mark for correctly taking their total BE on right from their total BE on left. Not vice versa. If you cannot clearly see which is BE on right and which is BE on left, don't award this mark)</p>	
(c) (i)	<p><i>either:</i> average bond energies are not applicable to particular bonds ✓ <i>or:</i> ΔH_c is for $\text{H}_2\text{O}(\text{l})$, whereas bond energies are for gases ✓ <i>N.B. ignore any ref. to changes in conditions/temperature etc.</i></p>	[1]
(ii)	 <p style="text-align: center;">number of carbon atoms <i>plotting of points and a straight line</i> ✓</p>	[1]
(iii)	<p>-3450 to $-3550 \text{ (kJ mol}^{-1}\text{)}$ (ignore absence of sign, but do not allow +) ✓ (allow e.c.f. - correct interpretation of incorrect graph)</p>	[1]
(iv)	<p>Successive members/molecules/compounds/formulae increase by a regular/fixed/the same amount (of C and/or H) <i>or</i> by a CH_2 group ✓</p>	[1] 12 max 11

Question	Expected Answers	Marks
6 (a)	<ul style="list-style-type: none"> • mention of two of the following as <i>pollutants</i>, or as <i>products of combustion</i> or as <i>being present in exhaust gases</i>: carbon monoxide, nitrogen monoxide, nitrogen dioxide, unburned hydrocarbons (ignore any ref. to sulphur compounds) • heterogeneous (catalysis) (<i>not heterolytic!</i>) • needs a high temperature • (reactants) <u>adsorbed</u> onto the catalyst's surface • weakly/temporarily bonded to the catalyst • bonds in reactants are weakened • (products easily) desorbed after reaction or lost/released from surface • description of how one of the pollutants undergoes transformation into harmless products, e.g. $\text{CO} + \text{NO} \longrightarrow \text{CO}_2 + \frac{1}{2}\text{N}_2$ (or $2\text{CO} + \text{O}_2 \longrightarrow 2\text{CO}_2$ or $2\text{NO} \longrightarrow \text{N}_2 + \text{O}_2$ or $\text{h/c} + \text{O}_2 \longrightarrow \text{CO}_2 + \text{H}_2\text{O}$) (or in words - equation does not need to be balanced) <i>any five bullet points ✓✓✓✓✓</i> <p>Q of WC: Look for two things here; the overall account must read clearly, and make sense grammatically (ignore spellings), and in addition at least one of the following words should be used correctly in a suitable context: heterogeneous, catalyst, adsorption, desorption., oxidation, reduction <i>Indicate this mark as Q✓</i></p>	[6]
(b)	<ul style="list-style-type: none"> • Haber process converts nitrogen/N_2 (from the air hence cheap and plentiful) into ammonia/NH_3 or in an (unbalance) equation <i>ammonia is used</i> • as a refrigerant <i>and to make</i> • fertilisers • such as ammonia itself, ammonium sulphate or other ammonium salt or urea etc. • which are needed for more crops/food),. <i>and nitric acid, which is used to make</i> • explosives or a named N-containing explosive, • polyamides/nylon, • dyes etc. <i>any 4 bullet points ✓✓✓✓</i> 	[4] total 10
