**TIME** 1 hour 30 minutes**INSTRUCTIONS TO CANDIDATES**

- Write your name in the space above.
- Write your Centre number and Candidate number in the boxes above.
- Answer **all** the questions.
- Write your answers in the spaces on the question paper.
- Read each question carefully and make sure you know what you have to do before starting your answer.

**INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [ ] at the end of each question or part question.
- You will be awarded marks for the quality of written communication where this is indicated in the question.
- You may use a scientific calculator.
- You may use the *Data Sheet for Chemistry*.
- You are advised to show all the steps in any calculations.

**This question paper consists of 14 printed pages 2 blank pages.**

Answer **all** questions

1 This question refers to calcium chloride, made up of  $\text{Ca}^{2+}$  and  $\text{Cl}^-$  ions.

(a) Complete the table below.

species	number of	
	protons	electrons
$\text{Ca}^{2+}$		
$\text{Cl}^-$		

[2]

(b) Complete the electronic configuration of  $\text{Ca}^{2+}$ .

$1s^2$  .....

[1]

(c) (i) What is the formula of calcium chloride?

.....

[1]

(ii) Using outer electron shells only, draw a 'dot-and-cross' diagram of calcium chloride.

[2]

(iii) How is a solid structure of calcium chloride held together?

.....

[1]

(d) When an electric current is passed through aqueous calcium chloride, chlorine gas is released. The overall equation for the reaction taking place is shown below.

(i) Predict what would happen to the pH of the solution. Explain your answer.

.....

.....

[2]

(ii) Explain why an aqueous solution of calcium chloride conducts electricity whereas solid calcium chloride does not.

.....

.....

.....

[2]

- (e) 72 cm<sup>3</sup> of chlorine gas were collected and shaken with water.

The following reaction takes place.

- (i) Determine the oxidation number of chlorine in

Cl<sub>2</sub> .....

HClO .....

HCl ..... [3]

- (ii) How many moles of Cl<sub>2</sub> were collected?

[Under the conditions used, 1 mol of gas molecules occupies 24 dm<sup>3</sup>.]

Answer ..... [1]

- (iii) State a widespread use for this reaction.

..... [1]

[Total : 16]

- 2 The first ionisation energies of the elements Na to K are represented in Fig. 2.1 below.

Fig. 2.1

- (a) Define the term *first ionisation energy*.

.....  
.....  
.....  
.....[3]

- (b) Explain why

- (i) the first ionisation energies show an overall increase from Na to Ar;

.....  
.....  
.....[3]

- (ii) the first ionisation energy of Al is less than that of Mg.

.....  
.....  
.....[2]

- (c) Explain the difference between the first ionisation energies of Ar and K.

.....  
.....  
.....  
.....[3]

- (d) Refer to Fig. 2.1 to answer this question.

Estimate a value for the first ionisation energy of Ne.

First ionisation energy of Ne = .....  $\text{kJ mol}^{-1}$  [1]

- (e) Write the equation, including state symbols, for the change that accompanies the **third** ionisation energy of aluminium.

.....[2]

[Total : 14]

- 3 The formation of magnesium oxide, MgO, from its elements involves both oxidation and reduction in a redox reaction.

(a) (i) What is meant by the terms *oxidation* and *reduction*?

*oxidation* .....

.....

*reduction* .....

.....[2]

(ii) Write a full equation, including state symbols, for the formation of MgO from its elements.

.....[2]

(iii) Write half equations for the oxidation and reduction processes that take place in this reaction.

*oxidation* .....

*reduction* .....[2]

(b) MgO reacts when heated with acids such as nitric acid, HNO<sub>3</sub>.

A student added MgO to 25.0 cm<sup>3</sup> of a warm solution of 2.00 mol dm<sup>-3</sup> HNO<sub>3</sub> until all the acid had reacted.

(i) How would the student have known that the reaction was complete?

.....

.....[1]

(ii) Calculate how many moles of HNO<sub>3</sub> were used.

Answer .....moles [1]

(iii) Deduce how many moles of MgO reacted with this amount of HNO<sub>3</sub>.

Answer .....moles [1]

(iv) Calculate what mass of MgO reacted with this amount of  $\text{HNO}_3$ .

[ $A_r$ : Mg, 24.3; O, 16.0]

Give your answer to three significant figures.

Answer .....g [3]

(v) Using oxidation numbers, explain whether the reaction between MgO and  $\text{HNO}_3$  is a redox reaction.

.....  
.....  
.....  
.....[2]

(c) MgO has a very high melting point.

Explain this property of MgO.

.....  
.....  
.....[2]

[Total : 16]

- 4 The compounds  $\text{NH}_3$ ,  $\text{BF}_3$  and  $\text{HI}$  all have covalent bonding and simple molecular structures. The Pauling electronegativity values shown in Table 4.1 below can be used to predict polarity in these compounds.

H 2.1
----------

Li 1.0	Be 1.5	B 2.0	C 2.5	N 3.0	O 3.5	F 4.0
Na 0.9						Cl 3.0
K 0.8						Br 2.8
						I 2.5

Table 4.1

- (a) Explain the term *electronegativity*.

.....

.....

.....[2]

- (b) The electronegativity values in Table 4.1 can be used to predict the polarity of a bond. In the boxes below, show the polarity of each bond by adding  $\delta+$  or  $\delta-$  to each bond. The first box has been completed for you.

$\delta-\text{O}-\text{H}\delta+$	H-N	F-B	H-I
-----------------------------------	-----	-----	-----

[2]

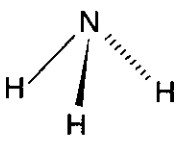

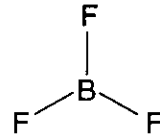

- (c) Using outer electron shells only, draw 'dot-and-cross' diagrams for molecules of  $\text{NH}_3$  and  $\text{BF}_3$ .

$\text{NH}_3$	$\text{BF}_3$

[2]

- (d) The diagrams below show the shapes of molecules of  $\text{NH}_3$  and  $\text{BF}_3$ .

In the spaces below each diagram, state the bond angle in each molecule and state the name of each shape.

	
bond angle:	bond angle:
shape:	shape:

[4]

- (e) Explain why  $\text{NH}_3$  has polar molecules whereas molecules of  $\text{BF}_3$  are non-polar.

.....  
 .....  
 .....[2]

- (f) Polar molecules of  $\text{NH}_3$  form hydrogen bonds. Draw a diagram to show this hydrogen bonding.

[1]

- (g)  $\text{NH}_3$  reacts with  $\text{HI}$  to form the ionic compound  $\text{NH}_4\text{I}$ , made up of  $\text{NH}_4^+$  and  $\text{I}^-$  ions.

- (i) Explain why the H–N–H bond angle in  $\text{NH}_3$  is less than that in  $\text{NH}_4^+$ .

.....  
 .....  
 .....[2]

- (ii) Describe a simple test to confirm the presence of  $\text{I}^-$  ions in an acidified solution of  $\text{NH}_4\text{I}$ .

.....  
 .....  
 .....[2]

[Total : 17]

[Turn over

- 5 In the UK, over 60 million tonnes of limestone are quarried each year. Much of this limestone is used to produce cement. The main chemical in limestone is calcium carbonate,  $\text{CaCO}_3$ .

(a) Complete the flow-chart below for reactions starting from calcium carbonate. You should identify each of the substances **A–F** by name or formula.

[6]

- (b) Cement is a mixture of calcium and aluminium silicates, formed by heating limestone with clay.

A typical bag of cement has a mass of 25 kg. Calculate the mass of limestone (taken as calcium carbonate) required to make 25 kg of cement.

The molar mass of cement, taken as  $(2\text{CaSiO}_3 + \text{Ca}_2\text{Al}_2\text{O}_5)$ , is  $446.6 \text{ g mol}^{-1}$

[ $A_r$ : Al, 27.0; C, 12.0; Ca, 40.1; O, 16.0; Si, 28.1]

[3]

(c) Lime mortar is a thick paste made by adding water to a mixture of slaked lime,  $\text{Ca(OH)}_2$ , and sand. As mortar dries out the slaked lime reacts with carbon dioxide in the air, forming calcium carbonate which causes the mortar to harden.

(i) Write an equation to represent the hardening of mortar. Assume the sand does not react.

.....[1]

(ii) In time, lime mortar crumbles and needs to be replaced. Suggest why this happens more quickly when the mortar is exposed to air contaminated with acidic pollution.

.....  
.....
