

GCE AS MARKING SCHEME

SUMMER 2016

COMPUTER SCIENCE - NEW AS UNIT 1 2500U10-1

INTRODUCTION

This marking scheme was used by WJEC for the 2016 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

GCE AS COMPUTER SCIENCE

SUMMER 2016 MARK SCHEME

Unit 1

Q			P	Answer			Marks	AO1	AO2	AO3	Total
1a	•		ks if the n	umber is di	visible by 2 / inputted number.		1		2.1b		3
	•	If the resul	t of modul	us is 0 then	the number can		1		2.1b		
	•	If the modu	ulus is not		number. hen the number i it will be odd	is	1		2.1b		
1b	Awa	ard 1 mark	per respon	nse.							2
				IOD 2 = 0	Then		1		2.1b		_
	•	Selection of	outputs nu		even number" if		1		2.1b		
1c	Awa	ard 1 mark	per respoi	nse.			1		2.1b		2
		-			berstocheck						
		Repetition numbers h			e even/odd until a	all					
		numbers m	ave been	oriconcu.			1		2.1b		
2				1_	_						4
		Ā	В. С	$\overline{A} + B.C$	\overline{A} . $(A + B. C)$						
		0	1	1	0						
		0	0	0	0						
		1	1	1	1						
		1	0	1	0						
	Awa	ard One ma	ark for eac	h correct co	olumn.		4		2.1a		

Q	Answer	Marks	AO1	AO2	AO3	Total
3	Award 1 mark for naming x 4 Award 1 mark for describing the function of the named component x 4	4 4	1.1a 1.1b			8
	Control unit / clock Manages the Fetch/Decode/Execute cycle OR Fetches each instruction in sequence, decodes and synchronises it by sending control signals to other parts of the computer.					
	Arithmetic Logic Unit (Accept ALU) The processing and manipulation of data which normally consists of arithmetic operations or logical comparisons, allowing a program to take decisions.					
	Registers (MAR/MDR/CIR etc) • A small/fast access/ temporary storage typically addressed by mechanisms other than main memory. (Or a description of MAR MDR etc)					
	Buses(Data Bus / Control Bus / Address Bus) Connects all the internal components of a computer, such as CPU and memory, to the motherboard.(Or specific role of named bus)					
	Cache memory /Internal Memory (L1, L2) Cache memory can be accessed by a CPU more quickly than it can access regular RAM to execute frequently accessed items of code (e.g. loops).					

Q	Answer	Marks	AO1	AO2	AO3	Total
4	Award 1 mark for each up to a maximum of 6	6	1.1b			6
	A museline after					
	Any six of:					
	 Editor: this allows a programmer to enter and edit source code/annotation 					
	Compiler: Translates source code into machine code					
	Interpreter: Translates each line/a single line of source					
	code and executes it					
	Automatic formatting: Correctly indents code					
	 Automatic colour coding: Changes key words, literals 					
	and annotation to different colours					
	Linker: this is a program which allows previously compiled code, from poftware libraries, to be linked.					
	compiled code, from software libraries, to be linked together					
	 Loader: this is a program which loads previously 					
	compiled code into memory.					
	Debugger: this is a program which helps locate, identify					
	and rectify errors in a program					
	Syntax error detection: Highlighting syntax errors before					
	 code is translated Trace: this is a facility which displays the order in which 					
	I race: this is a facility which displays the order in which the lines of a program are executed, and possibly the					
	values of variables as the program is being run					
	Break point: this is a facility which interrupts a program					
	on a specific line of code, allowing the programmer to					
	compare the values of variables against expected					
	values. The program code can then usually be executed					
	 one line at a time. This is called single-stepping Variable watch: this is a facility which displays the 					
	current value of any variable. The value can be					
	'watched' as the program code is single-stepped to see					
	the effects of the code on the variable. Alternatively a					
	variable watch may be set, which will interrupt the					
	program flow if the watched variable reaches a specified					
	valueMemory inspector: this is a facility which will display the					
	contents of a section of memory					
	Error diagnostics: these are used when a program fails					
	to compile or to run. Error messages are displayed to					
	help the programmer diagnose what has gone wrong					
	Emulator: will provide an emulator to run the code/app so no physical dovice required.					
	so no physical device requiredContext sensitive menu: IDE suggests available options					
	Statement completion: IDE will complete a statement					
	such as adding an 'end if' to an 'if' statement					
	GUI creation: Allows programmer to create a GUI by					
	dragging and dropping controls (buttons, etc) onto a					
	form.					
	Publisher: facility to package up and deploy program as an easy to install package.					
	an easy to install packageCode optimisation: Warning message when variables					
	have been declared but not used.					
	Accept use of IDE/SDE/SDK interchangeably					

Q	Answer	Marks	AO1	AO2	AO3	Total
5a	Award 1 mark for each					3
	Simplex • Data transmission is possible in one direction only.	1	1.1b			
	 Half duplex Data transmission is possible in both directions, but only in one direction at a time. 	1	1.1b			
	Full duplexData transmission is possible in both directions simultaneously.	1	1.1b			
5b	Award 1 mark for each Data collision occurs when two sets of data are detected on the network simultaneously.	1	1.1b			2
	Once detected, a computer waits for a short (random) time then sends again.	1	1.1b			
6ai	Award 1 mark A byte is a collection of 8 bits, (e.g. 001010102)	1	1.1a			1
6aii	Award 1 mark A word is the total number of bits that can be manipulated as a single unit by the CPU.	1	1.1b			1
6b	Award 1 mark for each					4
	Convert 2A ₁₆ into binary: 00101010 ₂ Convert BB ₁₆ into binary: 10111011 ₂	1 1		2.1a 2.1a		
	Binary addition:					
	00101010 ₂ 10111011 ₂ 11100101 ₂ 011101000	1 (answer) 1 (carry)		2.1a 2.1a		
6c	Award 1 mark for each					2
	 From RHS, rewrite it up to and including the first one by change other 1 digits to 0 and 0 digits to 1 	1	1.1b			
	Flip the bits and add one.					
	Example: 00011011 → xxxxxxxx1 → 11100101	1		2.1a		

Q	Answer	Marks	AO1	AO2	AO3	Total
6d	Award 1 mark for each					3
		1		2.1a		
	Mantissa = 13/16 OR 0.8125,	1		2.1a		
	Exponent = 3	1		2.1a		
	Answer = $0.8125 \times 2^3 = 6.5_{10}$					
6e	Award 1 mark for each					6
	Truncation : number is approximated to whole number/tenth/hundredth etc. nearer zero. (condone lower, accept idea of shortened / cut off / removed)	1	1.1b			
	Rounding : number is approximated to nearest whole number/tenth/hundredth, etc.	1	1.1b			
	·			2.1a		
	Example			2.1b		
	Truncation: 26 ₁₀	1		2.1a		
	○ Error -0.8 ₁₀	1		2.1b		
	• Rounding: 27 ₁₀	1				
	○ Error +0.2 ₁₀	1				

Q	Answer	Marks	AO1	AO2	AO3	Total
7	Award 1 mark for each:					6
	The physical location of the record is calculated	1	1.1b			
	using a hashing algorithm		4.41.			
	This calculation is carried out on data in the key Calculate and the second of t	1	1.1b			
	field(or other mandatory data item) • A data collision occurs when two data items are	1	1.1b			
	A data collision occurs when two data items are hashed to the same location	'	1.15			
	 In this case there needs to be an overflow areas 	1	1.1b			
	where the latest data is stored					
	When there are many items in the overflow area,	1	1.1b			
	access may become slow		4 41			
	In which case a new hashing algorithm is required	1	1.1b			
	and a larger file may be needed.					
8	Indicative content					8
	1 Declare MyArray[0 to 6]					
	2 Declare Start is integer					
	3 Declare End is integer					
	4 Declare Found is Boolean 5 Declare Mid is integer					
	6					
	7 set Start = 0					
	8 set End = 6					
	9 set Found = False					
	10					
	11 input SearchValue 12					
	13 repeat					
	14 set Mid = (Start + End) DIV 2					
	15 if SearchValue = MyArray[Mid]					
	then					
	16 set Found = True 17 Output "SearchValue found at					
	position", Mid					
	18 endif					
	19					
	20 if SearchValue > MyArray[Mid]					
	then 21 set Start = Mid + 1					
	22 endif					
	23					
	24 if SearchValue < MyArray[Mid] then					
	25 set End = Mid - 1					
	26 endif					
	27 until (Found = True) OR (End < Start)					
	28 29 if Found = False					
	30 Output "SearchValue not					
	found"					
	31 endif					

Q	Answer	Marks	A01	AO2	AO3	Total
	Marking Award 1 mark for each up to a maximum of 8					
	Declare array and initialise variables	1			3.1b	
	Input SearchValue	1			3.1b	
	Loop structure and increment	1			3.1b 3.1b	
	 Comparison with searchValue and output position if found 	1			3.1b	
	Correct terminating condition for loop				3.1b	
	Correctly discard half of array if myArray(Mid) >	1			2.46	
	SearchValue	'			3.1b	
	Correctly discard half of array if myArray(Mid) < SearchValue	1			3.1b	
	Output message if not found					
9	A standard module is one which carries out a common / standard task / can be used for a standard situation in a (many) program(s)	1	1.1b			4
	Example: print function / input validation / maths functions (e.g. square root)	1	1.1b			
	 Award 1 mark per benefit (any two of): No need to write again as has already been written/decreases development time Less likely to have errors because it has already been tested/used ("for real") Likely to be of high quality/efficient as may have been written by experts in the field 	2	1.1b			
10	A. (A + C) + C. (A + B) $A. A + A. C + C. A + C. B$ $A + A. C + C. A + C. B$ $A + A. C + A. C + C. B$ $A + A. C + C. B$ $A + A. C + C. B$ $A + C. B$ Award 1 Mark for initial expansion Max 3 Marks for each simplification (may award many marks for each line) Award 1 Mark for correct answer or $A. (A + C) + C. (A + B)$ $A. A + A. C + C. A + C. B$ $A + A. (C + C) + C. B$ $A + A. (C) + C. B$ $A + A. (C) + C. B$ $A + C. B$ Other methods equally acceptable	1 1 1 1 1		2.1a 2.1a 2.1a 2.1a 2.1a		5

Q	Answer	Marks	AO1	AO2	AO3	Total
12a	Award a maximum of 6 marks from any one	10	1.1b			10
	changeover method.					
	N.B:					
	1 Mark for name					
	1 Mark for description					
	Direct "big bang" approach can be adopted - sudden					
	change to new system					
	Could be used where a failure would not be					
	catastrophic					
	Can be cheaper to implement					
	 New system is available immediately if required 					
	Can be the least disruptive if implemented well					
	New system may not work as well until staff are					
	fully used to using it					
	If new system fails organisation have no system					
	which could be costly or dangerous					
	, 0					
	Parallel running - both systems running together for a					
	time					
	 Safest option as if new system fails they still have 					
	existing system					
	 New system is available immediately if required 					
	 The outputs from the old and new systems can be 					
	compared to check that the new system is running					
	correctly					
	Expensive as require temporary staff or overtime					
	for current staff to operate both systems					
	Could cause confusion for staff / customers having					
	two systems					
	Phased changeover - part-by-part (by functionality)					
	Allows users to gradually get used to the new					
	system					
	Staff training can be done in stages					
	All staff can focus on one area to resolve any					
	problems					
	Problems can be fixed quicker as more experts to					
	resolve one functionality problem at a time					
	 Difficulties identified in one area can be resolved 					
	and managed in next area					
	Might cause problems in the changeover period					
	when they need to communicate with each other					
	and have different systems					
	Slower to get new system up and running sempared to some other methods.					
	compared to some other methods					
	If a part of the new system fails, there is no back-up system, so data can be lost.					
	system, so data can be lostSome systems cannot easily be broken down by					
	functionality					
	ranononanty					
			l	l		

Q	Answer	Marks	A01	AO2	AO3	Total
12a	Pilot changeover - part-by-part (by part of the					
Cont'd	organisation)					
	All features of the new system can be fully trialled					
	If something goes wrong with the new system, only a small part of the organization is affected.					
	 small part of the organisation is affected The staff who were part of the pilot scheme can help 					
	train other staff.					
	All staff can focus on one area to resolve any					
	problems					
	Difficulties identified in one area can be resolved and					
	managed in next area					
	 For the office / department doing the pilot, there is 					
	no back-up system if things go wrong					
	Might cause problems in the changeover period					
	when they need to communicate with each other and					
	have different systems					
	 Slower to get new system up and running compared to some other methods 					
12b	Award any one mark per response up to a maximum of	6	1.1b			6
	6					
	From:					
	 Any form of diagrams used in analysis and design. 					
	 Descriptions of procedures and subroutines used. 					
	The data structure:					
	 What data structures have been used, database 					
	table designs and any other information about					
	what data needs to be stored.					
	Algorithm designs:					
	 Algorithms will normally be presented in pseudo- 					
	code or flowchart form.					
	 Annotated code listings: Code listings that abide by the coding standards 					
	set out by the development company. Normally					
	self-documenting and/or annotated.					
	Variable lists:					
	 Lists of the key variables listing their data types 					
	and purpose. More temporary variables, such as					
	loop counters, would not be included.					
	Data dictionary: This will describe all of the fields that need to be					
	 This will describe all of the fields that need to be stored in the data structure including data type, 					
	size, relationship with other tables and a					
	description.					
	Design documents:					
	 Any relevant documentation from design phase. 					
	Hardware and software requirements.					
	 Performance 					
	Storage Networking					
	NetworkingCompatibility					
	 Operating system 					
	Configuration guide and options:					
	 How the system can be configured, which could 					
	be through a menu system or by editing					
	configuration files.					
	comiguration mes.					

Q	Answer	Marks	AO1	AO2	AO3	Total
13	Criteria marked maximum of 10 marks	10	1.1b			10
	Indicative content					
	Types of backup routines: • A generation file backup system • This involves storage of three of the most recent versions of master file. (grandfather – father - son) • Useful if one version is corrupted: the previous version(s) is still available. • Data should be stored off site in case of a disaster.					
	 Incremental backup Only backs up data that has changed and writes over older back ups Useful as it saves storage space and is faster than full backup Only allows the user to restore the most recent backup. 					
	Delta change backup (accepted not expected) Only data changed since the previous backup is backed up The original backup is also maintained in case data needs to be restored Useful as it is faster than creating a complete backup					
	Recovery routines: Buying new hardware Recovery after disaster – restoring databases/files General backup procedures Test if backups work/can be restored Frequency of backup Timing, e.g. overnight Staff member with responsibility for ensures suitable back-up					
	 External hard disc drive Speed of access – Very fast transfer which is important as daily updates Cost per unit of storage – external hard disc is quite cheap per byte of storage Portability reason – external hard disc is physically quite small and can be easily stored securely and safely for example in a fire proof safe Suitability: Not suitable unless justified 					

Q	Answer	Marks	AO1	AO2	AO3	Total
	 Cloud storage / upload to a third party storage provider Speed of access – very fast transfer achievable (depending on network speed) for daily updates Cost per unit of storage – could be cheaper or more expensive than external disk – accept either with justification Data is stored securely and safely on protected servers (or should be!) Suitability: Suitable for a large company if justified (i.e. contract in place for location of storage etc) 					
	 Flash memory stick Speed of access – Very fast transfer which is important as daily updates Cost per unit of storage – pen drive is quite cheap Portability reason – pen drive is physically small and can be easily stored securely and safely for example in a fire proof safe Suitability:Not Suitable for a large company 					
	 Magnetic tape Speed of access reason – Access to tape is serial and can be slow but could only back up files amended that day Cost per unit of storage reason – Tape is relatively (but drive can be expensive!) cheap compared with other secondary storage mediums Portability reason – Tape is physically small and can be easily stored securely and safely for example in a fire proof safe. Suitability: Used widely by large companies historically 					

Band	AO1.1b Max 10 marks
3	Award 8 - 10 marks The candidate has: • written an extended response that has a sustained line of reasoning which is coherent, relevant, and logically structured • shown clear understanding of the requirements of the question and a clear knowledge of the indicative content. Clear knowledge is defined as a response that provides eight to ten (up to a maximum of four for backup) relevant detailed points on backup routines and suitable secondary storage mediums, which relate to an extensive amount of the indicative content • addressed the question appropriately with minimal repetition and no irrelevant material • has presented a balanced discussion and justified their answer with examples • used appropriate technical terminology referring to the indicative content confidently and accurately.
2	Award 4 - 7 marks The candidate has: • written a response that has an adequate line of reasoning with elements of coherence, relevance, and logical structure • shown adequate understanding of the requirements of the question and a satisfactory knowledge of backup routines and suitable secondary storage mediums as specified in the indicative content. Satisfactory knowledge is defined as a response that provides four to seven points (up to a maximum of four for backup) as signalled in the indicative content • has presented a discussion with limited examples • used appropriate technical terminology referring to the indicative content.
1	Award 1 - 3 marks The candidate has: • written a response that that lacks sufficient reasoning and structure • produced a discussion which is not well developed • attempted to address the question but has demonstrated superficial knowledge of the topics specified in the indicative content. Superficial knowledge is defined as a response that provides one to three points on backup routines and suitable secondary storage mediums as signalled in the indicative content. • used limited technical terminology referring to the indicative content.
0	Award 0 marks Response not credit worthy or not attempted.
	Total 100 60 32 8 100
