# General Certificate of Education June 2010

## Computing

### COMP3

Unit 3 Problem Solving, Programming, Operating Systems, Databases and Networking

Final

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

The Assessment and Qualifications Alliance (AQA) is a company limited by guarantee registered in England and Wales (company number 3644723) and a registered charity (registered charity number 1073334). Registered address: AQA, Devas Street, Manchester M15 6EX

#### Notation used in mark scheme:

- ; means a single mark
- // means alternative response
- / means an alternative word or sub-phrase
- **A** means acceptable creditworthy answer
- **R** means reject answer as not creditworthy
- I means ignore
- **DPT** don't penalise twice. A mistake that might otherwise result in the loss of more than one mark should only lose the first mark. Subsequently the mistake should be ignored.

1	(a)	Can be used over longer distances // fewer wires/cables/lines required // only one pathway required // cheaper to cable // no risk of data skew // easier to repeat/regenerate/switch // switching equipment/repeater design is easier/cheaper // no crosstalk; <b>R</b> Cheaper <b>NE</b> <b>R</b> Cannot get out of synch	1
---	-----	---	---

1	(b)	Parity Bit: 1;	
		<i>Start bit, Stop Bit :</i> Can be either 0 or 1, but must both be different to get mark:	2
		5	

1	(C)	Definition (1 mark):	
		Receiver and transmitter (clocks) do not need to be/are not	
		(exactly) synchronised // transmission of data without use of	
		external clock signal // receiver and transmitter clock only	
		synchronised at start of/for length of transmission // data sent as	
		soon as available rather than waiting for clock pulse/	
		synchronisation symbol.	
		by nonioution by mooi,	
		Explanation of start and stop hits (2 marks):	
		Start hit synchronices receiver (cleck) (to transmitter/data) //	
		Start bit Synchronises receiver (Clock) (to transmitter/udita) //	
		locks receiver and transmitter in phase // starts receiver's clock //	
		wakes receiver;	
		Stop bit allows start bit to be recognised // allows receiver to	
		process received bits;	
		Start and stop bits indicate when data is being	
		transmitted/begins;	
		MAX 2	3
	1		

2	(a)	To hide the complexities of the hardware from the user // Provision of	
		virtual machine; <b>R</b> Provision of user interface NE	
		A machine for hardware but R system, computer	
		Manages the hardware (resources) // allocation of hardware resources	
		(to processes); A Examples of resources	2

2	(b)	Subject-related points:	
		<ul> <li>Desktop computer used for many different/generic purposes; so</li> <li>desktop OS must support a wide range of peripherals/storage devices;</li> </ul>	
		<ul> <li>desktop OS must run wide range of software/packages;</li> </ul>	
		desktop OS more customisable (by user);	
		• desktop OS must manage security,	
		<ul> <li>Desktop computer requirements more likely to change over time // more likely to want to add new features/support new applications; so</li> <li>desktop OS has modular design / easier to upgrade;</li> </ul>	
		Desktop computers made by many different manufacturers // to varying specifications; so	
		desktop OS must run on wider range of hardware platforms;	
		<ul> <li>Desktop computer more likely to be networked; so</li> <li>desktop OS must support networking protocols;</li> </ul>	
		Embedded systems (often) made at low cost // may have minimal	
		processing requirement; so	
		such as slower processor, less RAM);	
		Embedded systems have few inputs and outputs to user; so	
		<ul> <li>embedded system OS provides no/minimal user interface;</li> <li>embedded system OS designed to deal with input from sensors //</li> </ul>	
		output to control devices;	
		<ul> <li>Embedded systems (often) in battery powered devices; so</li> <li>managing power consumption particularly important; A example of power management</li> </ul>	
		Embedded systems (are sometimes) real-time // for safety-critical	
		<ul> <li>real-time embedded system OS must be designed to guarantee</li> <li>speed of response // respond very quickly:*</li> </ul>	
		<ul> <li>real-time embedded system OS must deal with many inputs</li> <li>simultaneously:*</li> </ul>	
		<ul> <li>real-time embedded system OS may need to be failsafe:*</li> </ul>	
		<ul> <li>real-time embedded system OS may incorporate redundancy;*</li> </ul>	
		* - These points only valid if real-time system specifically referenced.	
		Accept any mix of points. The reason (in italics) does not have to be stated to award a mark for the difference/feature	
		Accept converse of the points if the point itself has not been given.	

ark	Bands a	and Description
8-4	To achie the subi	eve a mark in this band, candidates must meet iect criterion (SUB) and 4 of the 5 quality of
	written o	communication criteria (QWCx).
	SUB	Candidate has made three or more relevant points.
	QWC1	Text is legible.
	QWC2	There are few, if any, errors of spelling, punctuation and grammar. Meaning is clear.
	QWC3	The candidate has selected and used a form and style of writing appropriate to the purpose and has expressed ideas clearly and fluently.
	QWC4	Sentences and paragraphs follow on from one another clearly and coherently.
	QWC5	Appropriate specialist vocabulary has been used.
2	To achie	eve a mark in this band, candidates must meet
	the subj written d	iect criterion (SUB) and 4 of the 5 quality of communication criteria (QWCx).
	SUB	Candidate has made two relevant points.
	QWC1	Text is legible.
	QWC2	There may be occasional errors of spelling,
		punctuation and grammar. Meaning is clear.
	QWC3	The candidate has, in the main, used a form
		and style of writing appropriate to the purpose,
		with occasional lapses. The candidate has
		expressed ideas clearly and reasonably
	OWC4	The candidate has used well-linked sentences
	QVIC7	and paragraphs
	QWC5	Appropriate specialist vocabulary has been used.
1	To achie	eve a mark in this band, candidates must meet
	the subj	iect criterion (SUB). The quality of written
	commu	nication should be typified by the QWCx
	stateme	ents.
	SUB	Candidate has made just one relevant point.
	QWC1	Most of the text is legible.
	QWC2	There may be some errors of spelling,
		punctuation and grammar but it should still be
		possible to understand most of the response.
	QWC3	The candidate has used a form and style of
		writing which has many deficiencies. Ideas are
		not always clearly expressed.
	QWC4	Sentences and paragraphs may not always be
		weil-connected or bullet points may have been
		USEO.
	QVVC5	Specialist vocabulary has been used
_	<u> </u>	mappropriately of not at all.

Note: Even if English is perfect, candidates can only get marks for the	
points made at the top of the mark scheme for this question.	
If a candidate meets the subject criterion in a band but does not meet the quality of written communication criteria then drop mark by one band, providing that at least 3 of the quality of written communication criteria are met in the lower band. If 3 criteria are not met then drop by two bands.	
	4

		<integer> ::= <whole-number>   + <whole-number>  </whole-number></whole-number></integer>	
		- <whole-number></whole-number>	
		1 mark for each correct rule	
		Alternative for integer (1 mark, accept in either order): $\leq x = \pm 1$	
		<pre><integer> ::= <whole-number>   <symbol> <whole-number></whole-number></symbol></whole-number></integer></pre>	
		A <whole-number> defined with recursion other way around, i.e. <whole-number> ::= <digit>   <whole-number> <digit></digit></whole-number></digit></whole-number></whole-number>	
		A non-terminal names e.g. digit not enclosed in <> signs	
		A spaces in non-terminal names e.g. whole number	
		A terminal names enclosed in quotation marks e.g. "0", '0'.	
		A any sensible symbol for assignment e.g. $\leftarrow$ , :=, =, :	
		A; as end-of rule marker;	
		A any type of slash e.g. / for alternatives but R "or"	
		A use of EBNF extensions for repetition and optional terms:	
		<pre><wnoie-number> ::= <aigit> { <aigit> } <interest <aigit="" =="" {=""> } </interest></aigit></aigit></wnoie-number></pre>	
		<pre><integer> ::= [ + ] - ] <wnoie-number> A () for [] but R {}</wnoie-number></integer></pre>	
		<b>R</b> rules that have additional options e.g. more than ten digits	

2

			<b>DPT</b> addition of chevrons or other symbols such as brackets to terminal symbols/rules unless they make meaning unclear	3
5	(a)	(i)	O(a <sup>n</sup> ); <b>A</b> exponential, a <sup>n</sup>	1
	•	•	•	•
5	(a)	(ii)	A;	1
5	(b)	(i)	The problem can be solved // algorithm exists for problem; But it cannot be solved in polynomial time // but not quickly enough to be useful;	
			It takes an unreasonable amount of time; to solve;	

5	(b)	(ii)	Use of heuristic; algorithm that makes a guess based on experience; That provides a close-to-optimal solution/approximation; that only works in some cases; <b>A</b> non-optimal Example of heuristic method e.g. hill-climbing/stochastic/local improvement/greedy algorithms/simulated annealing/trial and error/any reasonable example; Relax some of the constraints on the solution; <b>A</b> solve simpler version of problem <b>MAX 2</b>	2

 ${\bf A}$  too long time but  ${\bf R}$  long time

6	(a)	<ul> <li>What means: every attribute (in relation) is dependent on the key; the whole key and nothing but the key; OR (relations) contain no repeating groups (of attributes) // data is atomic; no partial dependencies; no non-key dependencies;</li> <li>R No repeated columns/attributes/data OR every determinant (in the relation) is a candidate key;;</li> <li>MAX 2</li> <li>Why important: Eliminate update anomalies; A Example R Easy to update NE Eliminate insertion anomalies; A Example Eliminate deletion anomalies; A Example Eliminate data inconsistency // improve consistency // avoid inconsistency problems; Minimise data duplication; A Reduce for minimise R elminate Eliminate data redundancy; A Reduce/minimise for eliminate A No unnecessarily repeated data R No repeated data R Saving space/memory NE MAX 2</li> </ul>	4

6	(b)	Magazine Subscription Customer	
		1 mark for per correct relationship MAX 2 I incorrect relationships	2
6	(c)		
0	(0)	MagazinelD VARCHAR(8) FRIMART RET(NOT NOLL) // MagazinelD VARCHAR(8) PRIMARY KEY(MagazinelD) MagazineNama VARCHAR(10)	

	A any sensible types / field lengths. Some examples are: For MagazineID: integer For SubscriptionRate: money, currency, float, real, decimal, dec, double, double precision, numeric As alternative to varchar: char, varchar, text, nchar, nvarchar, ntext, longvarchar, varchar2, nvarchar2 R answers clearly written in a different programming language	2
F	R answers clearly written in a different programming language	2

6	(d)	SELECT CustomerName, Address, Postcode FROM Magazine, Subscription, Customer WHERE MagazineName = 'AQA Computing Now' AND EndDate < '01/06/2010' AND Magazine.MagazineID = Subscription.MagazineID AND Subscription.CustomerID = Customer.CustomerID	
		<ul> <li>1 mark for SELECT clause with correct three fields (allow any additional fields from relations or *)</li> <li>1 mark for FROM clause with correct three tables</li> <li>1 mark for MagazineName = 'AQA ComputingNow'</li> <li>1 mark for EndDate &lt; '01/06/2010'</li> <li>1 mark for two clauses linking tables on the common field</li> <li>MAX 1 of the 3 marks for conditions if not joined by ANDs</li> </ul>	
		OR	
		SELECT CustomerName, Address, Postcode FROM Magazine INNERJOIN Subscription ON Magazine.MagazineID=Subscription.MagazineID INNERJOIN Customer ON Subscription.CustomerID=Customer.CustomerID WHERE MagazineName = 'AQA ComputingNow' AND EndDate < '01/06/2010'	
		<ul> <li>1 mark for SELECT clause including correct three fields (allow any additional fields from relations or *)</li> <li>1 mark for correctly joining two tables in FROM clause</li> <li>1 mark for correctly joining the third table in FROM clause</li> <li>1 mark for MagazineName = 'AQA ComputingNow'</li> <li>1 mark for EndDate &lt; '01/06/2010'</li> </ul>	
		In both solutions: Do not award mark for 'AQA Computing Now' unless it is enclosed in single or double quotation marks. For EndDate, accept # symbols or no delimiting symbols. Accept EndDate day and month without preceding 0, i.e. 1/6. Accept <= '31/05/2010' for EndDate. Accept table names before fieldnames. Accept use of Alias/AS command e.g. FROM Magazine as M then use of M as table name. Accept insertion of spaces into fieldnames DPT for unnecessary punctuation – allow one semicolon at the very end of the statement, but not at the end of each clause. DPT for fieldname before table name.	5

6	(0)		
O	(e)		
		SET MagazineName= 'AQA Garden News'	
		WHERE MagazineName= 'AQA Gardening Monthly'	
		1 mark per correct line	
		A double or single quotes around magazine names <b>R</b> no quotes	
		Accept table names before fieldnames.	
		<b>DPT</b> for fieldname before table name.	

		MAX 2	2
7	(a)	1 mark for all 5 lines correctly drawn 1 mark for all 5 lines correctly drawn 1 mark for all 5 arrowheads pointing in correct directions A arrowheads at any position on line MAX 1 if more than 5 lines drawn by candidate (note that dotted arrow is given in question)	2

7	(b)	Adjacency matrix appropriate when there are many edges	
		when presence/absence of specific edges needs to be tested (frequently)	
		Adjacency list appropriate when there are few edges between vertices // when graph is sparse // when edges rarely changed //when presence/absence of specific edges does not need to be tested (frequently)	
		A alternative words which describe edge e.g. connection, line	2

7	(c)	Connected // There is a noth between each pair of vertices:	
1	(C)	Connected // There is a path between each pair of ventices,	
		Undirected // No direction is associated with each edge;	
		Has no cycles // No (simple) circuits // No closed chains // No	
		closed paths in which all the edges are different and all the	
		intermediate vertices are different // Ne route from a vertex back	
		to itself that doesn't use an edge more than once or visit an	
		intermediate vertex more than once;	
		MAX 2	
		Alternative definitions:	
		Graph with no cycles, and a simple cycle is formed if any edge is	
		added to it:	
		Oranh which is connected, and it is not connected any mean if	
		Graph which is connected, and it is not connected anymore if	
		any edge is removed from it;;	
		Graph in which any two vertices can be connected by a unique	
		simple nath (Note: not just adjacent vertices)	
		Croph which is connected and has n 1 adaps where n is no of	
		Graph which is connected and has h = 1 edges where h is no of	
		vertices;;	
		Graph which has no simple cycles and has n – 1 edges where n	
		is no of vertices:	2
			-

7	(0)	For colution with 2 arrayou	
1	(e)	For solution with 5 dilays.	
		One array stores data items;	
		One array for left child pointers;	
		One array for right child pointers;	
		Pointers stored at same location in arrays as corresponding data	
		item;	
		For solution with 1 array of records:	
		Record created to store data item and pointers;	
		One pointer to left child:	
		One pointer to right child:	
		For either of the above solutions:	
		Roque value (allow example) used to indicate no child:	
		Variable indicates position in array(s) of root node // Root node	
		stored at first location/start of array(s):	
		If anowered as disgram	
		Il diisweleu as uidyidiil.	
		Column for data with at least three correct data items in it;	
		Use of rogue value for a node that does not have child;	
		Correct value for a start pointer variable indicating position of	
		root node in the array (not drawn as an arrow, array indices	
		must be labelled);	
		Column for left child pointers*:	
		Column for right child pointers*	
		* - To get these marks there must be a sufficient number of	
		- To get these marks, there must be a sufficient number of	
		pointers to demonstrate that the data structure is a	
		representation of a binary tree, but it is not necessary for every	
		Item to be shown. Also the array indices must be shown.	
		MAX 3	3

8	(c)	Check numbe	t if the tape contains an even / odd number of 1s // check parity of er on tape;	1
8	(d)	Turing Provic (and c No co any al by a T (The C is an e that ca Throu canno <b>MAX</b> 2	g machines provide a (general/formal) model of computation; les a definition of what is computable // a task is computable if only if) it can be computed by a Turing machine; mputing device can be more powerful than a Turing machine // gorithm that can be computed by any computer can be computed uring machine; Church–Turing thesis states that) if an algorithm exists then there equivalent Turing machine for that algorithm // a Turing machine an implement the algorithm; gh the Halting Problem, can be used to prove that some functions t be computed; 2	2

			different to the one in (ii)	

9	(b)	Star;	1

9	(c)	Identify which other computers are on same segment // can have packets/data sent <u>directly</u> to them; Identify which other computers are on a different segment // must have packets/data sent to them via the router; <b>R</b> network for subnet	
		MAX 1 255.255.255.0 / FFFFF00 / 1111111111111111111111100000000;	2

9	(d)	Use of WEP/Wired Equivalent Privacy/WPA/WiFi Protected Access; (Strong) encryption of transmitted data; <b>R</b> encoding User/computer must enter/send a passphrase/certificate at start of communication before laptop allowed to connect; <b>A</b> key for passphrase <b>A</b> only allow password if used in correct context; Access point checks MAC/hardware address of laptop and only allows computers with a MAC/hardware address in a list of approved addressed to connect; <b>R</b> IP address Disable broadcast of SSID/identity; Reduce / limit power of transmitter;	
		MAX 2	2

9	(e)	Subject-related points:		
		(Applies to) bus (topology);		
		Computer monitors/listens to (data signal on cable/bus);		
		If (data) signal present // if cable/bus busy continue to wait;		
		When no (data) signal present // when cable/bus idle start to trans	smit;	
		Whilst transmitting, computer monitors cable/bus to check for colli	ision //	
		to check if signal is identical to what it is sending;		
		Collision occurs if two computers (start) sending at same time // if	two	
		packets/frames in transit at same time;		
		If collision detected, jamming signal/signal warning of collision ser	nt;	
		To ensure other (transmitting) computers aware of problem // to st	top	
		other computers sending data;		
		Computer that detected collision also stops sending data;		
		Then waits a random period before attempting to retransmit/repea	ating	
		transmission/this process;	-	
		Period is random to reduce likelihood of collision recurring (betwee	en	
		computers that caused collision);		
		If a collision occurs again then waits a longer random time before		
		attempting to transmit again;		
		Use of exponential back-off algorithm to determine wait time;		
		Mark Bands and Description		
		5-6 To achieve a mark in this band, candidates must meet		
		the subject criterion (SUB) and 4 of the 5 quality of		
		written communication criteria (QWCx).		
		SUB Candidate has produced a detailed description		
		of how CSMA/CD works, including what		
		happens if there is a collision (at least 5 points).		
		QWC1 Text is legible.		
		QWC2 There are few, if any, errors of spelling.		
		punctuation and grammar. Meaning is clear.		
		QWC3 The candidate has selected and used a form		
		and style of writing appropriate to the purpose		
		and has expressed ideas clearly and fluently.		
		QWC4 Sentences and paragraphs follow on from one		
		another clearly and coherently		
		QWC5 Appropriate specialist vocabulary has been		
		used		
		3-4 To achieve a mark in this band candidates must meet		
		the subject criterion (SUB) and 4 of the 5 quality of		
		written communication criteria (QWCx)		
		SUB Candidate has produced a reasonable		
		description which may or may not cover what		
		happens in the event of a collision (at least 3		
		points)		
		QWC1 Text is legible		
		QWC2 There may be occasional errors of spelling		
		punctuation and grammar. Meaning is clear		
		QWC3 The candidate has in the main used a form and		
		style of writing appropriate to the purpose with		
		occasional lanses. The candidate has		
		expressed ideas clearly and reasonably fluently		
		OWC4 The candidate has used well linked sentences		
		and paragraphe		
		anu paragraphis. OM/CE Appropriate appointiet vessbulary has here.		
		עוואט Appropriate specialist vocabulary has been

11	(a)	A class/subclass has/shares/inherits properties and methods with the (parent) class (it is derived from); <b>A</b> another class Building a hierarchy of classes with each child class inheriting access to its parent class's methods and properties; Relationship between two object types/objects in which one object (type) is a kind of the other; <b>MAX 1</b>	
		<ul> <li>A Just one of properties and methods, do not need both.</li> <li>A The following as alternatives to properties: fields, attributes, characteristics, data with data as BOD</li> <li>A The following as alternatives to methods: procedures, functions, code.</li> <li>A The following as alternatives to parent: base, super.</li> <li>A The following as alternative to child: descendent, subclass, derived.</li> </ul>	1

11	(C)	Method can be defined with same name; <b>A</b> method can be redefined, an inherited method (but not just inheritance) as implying same name But have different implementation/code // perform different function; The redefined method will be used instead of the parent's method; <b>A</b> This is an example of polymorphism <b>A</b> Procedure, function, subroutine for method.	2
