CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Level

MARK SCHEME for the October/November 2013 series

9691 COMPUTING

9691/33

Paper 3 (Written Paper), maximum raw mark 90

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	Page 2	Mark Scheme	Syllabus	Paper
		GCE A LEVEL – October/November 2013	9691	33
1	. , . , -	q + 2 /		[1]
	(ii) 6	3 5 p * + /		[1]
		nd mark for completely correct		[1]
	` '	nce for 6 and 2 answer 3		[1] [1]
	(c) (i) li	n-order traversal // (Traverse all subtrees in the order) le	eft-root-right	[1]
	(ii) A	3.14 r 2 ^ * =		[1]
	(iii) F	Post-order traversal // (Traverse all subtrees in the order)	left-right-root	[1]
				[Total: 8]
2	Progr progr Bette in all Queri If imp	rity is better managed am-data independence // Changing a field does am re-write r managed data integrity/data validation // Validation cod applications programs es and reports quickly produced lemented with a DBMS it will allow concurrent access to toted data duplication // data inconsistencies	e does not need	[1]
	(b) (i) n	nany cars are hired to many customers // many-to-many /	/ M:m	[1]
	(ii)	one depot has based there many cars // one-to-many // 1:	М	[1]
	(c)	CAR	CUSTOMER	
		able shown ne-to-many relationships		[1] [1]
		Yes) since there is a not a repeated group of attributes		[1]
	(ii) (`	Yes) Since there is only a single attribute primary key // There are no partial dependencies // All no-key attributes are dependant on the primary	y key	[1]
		wo of the non-key attributes are dependant // pepotManager and DepotAddress are dependant on	DepotID	[1]

			GOE A LEVEL GOLOBOTHOVOHIBOT 2010 3031	00
	((iv)	CAR(CarRegistrationNo, CarMake, CarModel, HirePriceCode,	DepotID) [1]
			<pre>DEPOT(DepotID, DepotAddress, DepotManager)</pre>	[1]
			If the primary key is no indicated, penalise once only	
	(e)		oids data duplication oids data inconsistencies	[1] [1]
	(f)	FRO	LECT HireID, CustomerID DM HIRE ERE CustomerID = 'C674' AND CarRegistration = '456431'	[1] [1] [1]
				[Total: 19]
3	(a)		mporary storage location de the (micro)processor	[1] [1]
	(b)	(i)	127	[1]
		(ii)	123	[1]
		(iii)	less digits used to represent any number Less likely to make a mistake when copying/converting a digit string Easy conversion between binary and hex (vice versa) than binary and denary	[1] [1] [1] MAX 1
	(c)	(i)	2 bytes	[1]
		(ii)	MAR ← [PC] // MAR given the contents of the PC PC ← [PC] + 1 // PC is incremented MDR ← [[MAR]] // The contents of the address in MAR is copied to MDR CIR ← [MDR] // The contents of MDR are copied to CIR	[1] [1] [1] [1]
			OR, if the candidate uses the suggested instruction MAR is given value 40 // PC contents of 40 are copied to MAR 73.24/The contents of address 40 is socied to the MDR.	[1]

7 (a) (i)

(ii) Network (Interface) card

[1]

(b) (i) Copper wire/coaxial/twisted pair

Wire conducts electricity // changing current denotes different signals

Optic fibre cabling

Separate fibres used for separate signal

Data travels very fast

Signal transmitted as light pulses/travels at the speed of light

Radio/Microwave signals

Wireless communication // allows for mobile communication

Mark as 2 × 2

(ii) Maximum possible distance

Speed of communication // data transfer rate
