## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk).

Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

### Giving you insight to inform next steps

ResultsPlus is Pearson's free online service giving instant and detailed analysis of your students' exam results.

- See students' scores for every exam question.
- Understand how your students' performance compares with class and national averages.
- Identify potential topics, skills and types of question where students may need to develop their learning further.

For more information on ResultsPlus, or to log in, visit [www.edexcel.com/resultsplus](http://www.edexcel.com/resultsplus). Your exams officer will be able to set up your ResultsPlus account in minutes via Edexcel Online.

### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk).

## Introduction

This was the first examination of paper 9EB0 03 and it yielded mixed results. For some candidates it gave the opportunity to bring together concepts and topics from across all four themes and show an impressive and integrated grasp of the subject. Rather disappointingly, for many others it represented a wasted opportunity. The pre-release case study should have been the stimulus for independent or group led research into a wide range of examples that could then have been used to illustrate and reinforce answers. It is worth remembering the levels of response indicators, where use of supporting evidence is one of the identifying characteristics for the higher levels. Far too many candidates offered generic and general answers that failed to do this and so prevented access to the full range of marks.

Centres need to appreciate the requirement to allocate 20% of the marks to quantitative skills (QS) as stated in the specification. For example, many candidates either failed to heed the instruction to use diagrams for questions 1(c) and 2(c), or drew inaccurate ones. The stimulus material contained a range of data, in both written and numerical form, QS9 (see specification, appendix 3) requires candidates to be able to *'interpret, apply and analyse information in written, graphical, tabular and numerical forms'*. Many candidates chose to ignore the data or did not make full use of it, once again limiting their attainment.

On the positive side, many candidates had prepared well and it was pleasing to see the use of many examples and case studies beyond the ones included in the extracts. Diagrams were often used well and arguments based on these were convincing and able to access the highest level.

## Question 1 (a)

Most candidates showed an understanding of the nature of market failure and were able to give examples to illustrate this, usually based on the evidence given. However, many just discussed market failure in general and its effects on the NHS rather than addressing the question set which was specifically about the food industry. This meant that they were unlikely to move beyond L2. Even amongst those candidates that did, there was often a failure to provide counter arguments and therefore did not provide a balanced awareness of competing arguments. However, there were some very good answers that used the data well to identify that perhaps it was as much a societal issue as one that could be solely blamed on the food industry.

This response reached L3 with 6 marks.

- 1 (a) Discuss the extent to which the UK obesity problem can be seen as market failure in the food industry.

(8)

Market failure occurs when a market has too many negative externalities. In the case of Obesity this occurs through the misallocation of resources and the overconsumption of demerit goods.

The UK obesity problem can be seen as market failure because externalities are putting pressure on the NHS with 5% of the NHS budget being used to solve health problems based on Obesity. UK Obesity is market failure, to a large extent because externalities are affecting 3rd parties and the government has been forced to intervene, with the introduction of the sugar tax, which it would not have done unless it saw the market as failing.

On the other hand the case of UK obesity cannot be blamed on the food industry as a whole. A select few

products and brands, such as take-aways or large quantities, have effected the obesity rate due to overconsumption and asymmetric information of the older generations or the young generations who could have not been educated properly. The Majority of the food market is relatively free of these externalities.

### ResultsPlus Examiner Comments

This response shows understanding with some use of evidence and there is an attempt at a competing argument that is relevant to the question.

#### Question 1 (b)

Some responses were superficial and a number of candidates scored low marks as they only described the data rather than answering the question. Many candidates were able to point out that there was an apparent correlation between poverty and obesity levels but relatively few were able to use the conflicting evidence in the data, such as the relatively small difference between obesity levels in men of different income quintiles, and assesses whether poverty reduction was the most suitable policy to use. Some candidates were able to consider other possible reasons for obesity which furthered their evaluation.

(b) Using Extract B and Figures 2 and 3, assess whether poverty reduction policies are the most effective way of dealing with the obesity crisis in the UK.

(10)

Poverty reduction policies may be effective in dealing with the obesity crisis in the UK. This is because people with lower incomes are more likely to be obese due to them choosing to buy <sup>cheaper</sup> more unhealthy foods like McDonalds rather than more expensive healthier foods. For example, obesity rates among <sup>women with</sup> unskilled occupations is 35.2% whilst <sup>women with</sup> professional occupations have an obesity rate of 18.2%. In turn by increasing wages and reducing poverty there will be less consumption by adults of

cheaper & fatty foods and more consumption of healthier more expensive products. However, the higher the income of a family, the more likely they're to have obese children.

In turn, it may be more effective for the UK government to do something like imposing a sugar tax. In turn, less people would purchase the sugary foods/drinks due to them being too expensive, particularly for lower income families so they will be forced to buy alternative snack foods like fruit ~~and~~ leading to less obesity in the UK due to the reduction in consumption of unhealthy foods and the increase in consumption of healthy foods for everyone in the UK.

### ResultsPlus Examiners' Comments

This response is rather brief but does make some valid points using the evidence. There is some inaccuracy but a counter argument is attempted, although this is rather assertion based. This response reached L3 and 6 marks.

### ResultsPlus Examiner Tip

The question instructs the candidate to use Extract B and figures 2 and 3, there is only one use of the data in this answer, more reference to the data would have been good. Always read the instructions carefully and make full use of the evidence provided.

This response reached L4 and 9 marks.

(b) Using Extract B and Figures 2 and 3, assess whether poverty reduction policies are the most effective way of dealing with the obesity crisis in the UK.

Subsidy  
health alternative  
Free  
breakfast

(10)

From fig 2 and 3, it shows that the most deprived area with low income earners are more likely to be obese. For example, there's a difference <sup>of</sup> between 11.1% of children age 10-11 years old <sup>in the</sup> most deprived area ~~have~~ <sup>have</sup> higher obesity than those who live in the least deprived area. Thus, poverty reduction can be a significant step to deal with obesity crisis that ~~cost~~ <sup>cost</sup> the government £6 billion/yr.

One poverty reduction policy is the ability to claim benefits e.g. child benefit and the disposable income could be higher to use in buying healthier food as an alternative to maybe cheaper fast-food e.g. Burger King. However, some people are not aware of the policy due to mis-information or decide not to take up this benefits. Therefore, the government takes the <sup>burden of</sup> cost that could have been used on other things e.g. education. It may also create stigma within the community so this policy may not be effective in dealing with obesity as it is not direct with many cost involves. The scheme could also create 'poverty' trap as the cut line of each category is very abrupt so people are discouraged to work, have less motivation and <sup>can still</sup> ~~leave still~~ have obesity.

Another policy could be to increase the supply of skilled labour by training scheme or subsidising firms to

train. This can be <sup>an</sup> effective as it increases workers motivation and get more people to be productive but can also give them knowledge about the cost of those unhealthy food as they're surrounded by peers <sup>trained</sup> or coworkers who have healthier habits. Moreover, ~~it is~~ workers could have disposable income to join gym membership and live an active life. Thus, if people take up the offer for this scheme, find stable job, then it could help solve obesity crisis as well as increase standard of living.

# On the other hand, poverty is not the only cause of obesity as the highest income quintile still have 24.2% prevalence for men which is only 0.5% difference from those with lowest income. So other policies which ~~are~~ might be cheaper or raise government revenue could be to promote the health effect ~~or~~ regulating food industries e.g. traffic light for salt, sugar, saturated fat content on every products or sugar tax as seen in extract C to decrease demand for those unhealthy foods.

In conclusion, poverty reduction could help to a certain extent but the ~~set~~ ~~policies~~ cost of policies may be higher than the external cost if government does not have full information. It could be use with other policies e.g. sugar tax to help combat obesity crisis in the UK.

**ResultsPlus**  
Examiner Comments

By contrast this response is much longer and contains some material that is not directly relevant to the question asked. However, it does make good use of the supporting evidence and the counter arguments on the second page are developed and balanced.

### Question 1 (c)

Some candidates ignored the instruction 'Using diagrams' and did none at all, whilst others produced inaccurate ones. Candidates need to be able to correctly draw and refer to relevant diagrams as a basis for their discussions. However, most candidates were able to provide an accurate diagram showing a leftward shift of the supply curve following the imposition of a sugar tax. However, despite clear instructions in the question, the majority of candidates did not follow this up with a secondary diagram to show, for example, that the effectiveness of the tax might be dependent on elasticity values. This limited the use of relevant evidence by candidates and did not demonstrate a full and thorough understanding of the question, making it difficult to access the higher marks. Better answers used supplementary diagrams to show that the effects of a sugar tax may be diminished due to the price inelasticity of certain products. Few candidates were able to provide a credible conclusion.

A reasonable response which just gets into L4 and scores 10 marks.

(c) Using suitable **diagrams**, assess the likely success of a sugar tax in reducing obesity in the UK.

The success of the sugar tax will be totally dependant on the price elasticity of sugar tax. This tax is a Pigouvian tax, applied to demerit goods to avoid their overconsumption. If sugary drinks are price inelastic, using fiscal policy (taxes) to correct market failure could lead to ~~market~~ <sup>government</sup> failure, as the population would still buy similar quantities of this good and would have less disposable income. On the other hand, government revenue would increase, which might improve public sector services. If ~~these~~ sugary drinks are elastic goods the effects will be huge and market failure will be corrected. As the shift to the left of the supply curve will reduce largely quantity demanded. If it's unitary elastic, the effects will be noticeable but not huge.

In conclusion, I believe that the sugar tax won't be successful, as sugary drinks are highly addictive, making them price inelastic, and rendering this policy ineffective to reduce overconsumption.

**ResultsPlus**  
Examiner Comments

The diagrams are good and support the arguments put forward. These could have been developed a bit more perhaps, and the final judgement is a little dogmatic but it does show full understanding of the question and is L4.

This response reached L2 and scored 4 marks.

(c) Using suitable **diagrams**, assess the likely success of a sugar tax in reducing obesity in the UK.

(12)

Sugar taxes is generally successful as it ~~is~~ discourages ~~some consumers to~~ supplies to produce more of the demand good. This will decrease supply, so the curve is shifted outwards, have less supply of something at a high price ~~in~~ this case sugar. Sugar tax will encourage businesses to produce more healthier food and drinks in order to reduce poverty and UK obesity.

Finally sugar taxes will be applied more on franchises that exist in the UK market, and may also lead to companies; who mainly

base their production on sugar food.

### ResultsPlus Examiner Comments

A brief response with a single diagram. The discussion is limited, one-sided and assertion based, with no allowance for competing arguments.

### ResultsPlus Examiner Tip

When setting out an argument or chain of reasoning it is always a good idea to be conditional, e.g. say 'it may happen' or 'this may lead to...' rather than 'it will happen' or 'this will lead to...'. This also acts as a prompt to set up a counter argument which is essential to reach the higher levels.

### Question 1 (d)

This question proved to be one of the better ones on the paper in discriminating between the more and less able candidates. It also showed clearly those candidates or centres who had prepared well by thoroughly researching the areas outlined in the pre-release.

There were some candidates who simply repeated the data in the paper and did little else than describe the information, gaining few if any marks. Many candidates adopted a narrow focus of just discussing government intervention in the food industry. A 20 mark question requires a more wide ranging approach. Other candidates ignored the data and attempted to have a general discussion on government interventions. A number of these responses were able to score reasonably well showing evidence, chains of reasoning, awareness of counter arguments and balance. Finally, there were a small number of candidates who combined a wide ranging and perceptive discussion of government intervention supported by well chosen data from the extracts and their own research, thus gaining good marks.

This response reached L3 and scored 13 marks.

(d) Evaluate the argument that market failure can be solved by government intervention.

(20)

Market failure is the disallocation of resources and government intervention is the policies set out by the government in order to reduce market failure. In the UK, there is a market failure for obesity which is claimed to be caused by sugary drinks and foods. The market failure occurred due to the lack of understanding of private and external costs of consumption.

which lead to a greater social cost than social benefit. The government could intervene by bringing in regulations and legislations on the amount of sugar consumption per each individual by limiting the available supply of these products.

The government can also introduce indirect taxes such as the ones on tobacco and alcohol. Such taxes increase the price of the product which would lead to a decrease in the quantity demanded where there is an elastic demand for the product.

Another possible government intervention is grants and subsidies. To reduce obesity in the UK, enhancing exercises and physical activity can improve the situation amongst with indirect taxation. A subsidy, money given by the government to an individual to spend it on a certain good or service, can be set up on gym memberships to get more people into working out and lowering the obesity rate.

As seen on the diagram, a suitable subsidy by the government would lead to a decrease in the price of the product and an increase in the quantity demanded.

This would result in a positive reaction to the government intervention and therefore it is more likely to solve market failure.

However, there is a chance of fraud when giving

free money to the public where the individual doesn't spend the money on the designated product which would then lead to government failure.

Also, regulations and legislations have to be enforced by the government in order for them to be effective but it is impossible, for example, to place a police officer next to every newspaper stand in order to avoid ~~underage~~ underage purchase of tobacco and alcohol products. The administration costs would exceed the social benefits which would make it very inefficient for the government.

Overall, there are several policies to deal with market failure. It all depends on how big the problem is where there is a market failure such as the UK obesity crisis and also how the government is able to intervene so that the problem is solved rather than making it worse which can then lead to government failure which means the UK government would then need to readjust its strategies to tackle the problem which can be costly and time consuming.

**ResultsPlus**  
Examiner Comments

This response shows reasonably accurate knowledge and understanding supported by some relevant evidence. Chains of reasoning are developed with some counter arguments but these lack balance and are not as developed as they could be.

## Question 2 (a)

Most candidates were able to define and show an understanding of what a minimum wage is, its purpose and its effects. Some candidates were able to supplement this by providing an accurate diagram to show the effects of the minimum wage on employment levels. Many candidates were unable to go beyond a basic analysis of increased costs and reduced profits for Whitbread with the alternatives being redundancy or a price increase. Some responses developed a counter argument considering the positive effects in terms of employee motivation and productivity. Only a minority of candidates seemed able to give any meaningful evaluation in the context of Whitbread, such as the possibility that increased incomes might lead to increased spending on the leisure industry or to use evidence from the real world.

This response reached L2 and scored 4 marks.

- 2 (a) Discuss the likely impact of an increase in the minimum wage on a firm such as Whitbread.

(8)

One impact of an increase in the minimum wage would be the heavily increased cost to the stores and chains, such as interserve (a cleaning firm) who will see a £15m increase in costs. This will mean that companies will either lay off staff to reduce labour costs within the business, or they will need to increase the price of goods to cover the increased costs however this may reduce demand for the product.

Another impact, however, could be a more motivated and efficient workforce, this could lead to an increased production rate. This may mean that the production costs decrease because productive capacity allows for a reduction in fixed costs as it can be spread over more units, variable costs should also fall because staff members waste less resources.

**ResultsPlus**  
Examiner Comments

A completely generic answer that nevertheless has some knowledge and understanding and some developed chains of reasoning.

**ResultsPlus**  
Examiner Tip

All questions on this paper require awareness of competing arguments and some evaluation. Don't forget to include this.

**Question 2 (b)**

This question appeared to be the most accessible on the paper. The majority of responses were able to show a consideration of the impact in the context of Lidl, with a discussion of increased costs and the subsequent potential impact on profits. Many candidates offered counter arguments that referred to the positive impact on Lidl's reputation or the effect on staff motivation. Stronger candidates reached well into L4 through discussion of attaining and keeping staff more easily as well as recognising the potentially low impact of a cost of £9m given the size of the business and its turnover of £4bn.

This response reached L3 and scored 7 marks.

(b) Assess Lidl's decision to become the first UK supermarket to pay 'at least the full living wage' (Extract E, line 4).

(10)

A living wage is ~~the~~<sup>an</sup> <sup>estimated</sup> wage in which people can be able to live on fairly comfortably.

Lidl's decision to pay at least the full living wage to all its employees could have negative implications for the business. This is because it will cost them <sup>an extra</sup> £9m per year. In turn, Lidl's will have increased costs leading to the potential of a loss in profits, ~~therefore~~ it being harder to expand (due to the increased costs implicated to employing more people, being forced to lay off some of its 4000 workers and potentially close down some <sup>620</sup> of its shops overall leading to a loss of profits.

However, it is highly ~~likely~~ likely that Lidl will be able to sustain high profits even with the added cost of £1m seeing as it had £4bn in sales last year. Moreover, Lidl's 9000 staff will see an average increase in wages of £1,200 meaning that they will be more motivated and therefore efficient at their jobs due to them being more content with their wages. In turn, consumers may experience a more friendly worker at Lidl giving them a USP and leading to the potential of more demand for Lidl products leading to an increase in sales and the potential for an increase in profits despite the £.9 billion increase in costs.

**ResultsPlus**

**Examiner Comments**

A good L3 response, accurate knowledge and understanding supported by use of relevant evidence; clear chains of reasoning and competing arguments are present. However it lacks the development and balance required for L4.

## Question 2 (c)

The diagram on this question caused some candidates great difficulties. A surprising number of responses showed little understanding of how a rent cap would work, with inaccurate diagrams, often a cap above equilibrium or a shift of either the S or D curves. This then caused problems as candidates tried to explain what the effects would be.

However, many responses showed an idea of what effect rent caps would have on demand, although a much smaller number were able to correctly analyse the negative effects this would have on supply. Some candidates did not make clear the distinction between the rental and house sale markets, often mixing the two up, which made analysis in responses harder to follow.

Stronger candidates were able to explain that the rent cap would cause less incentive for property investors to make rental properties available due to reduced profitability. Few candidates were able to explain that there may be other ways that the government might alleviate the housing crisis.

A good L3 response with 9 marks.

(c) Using a suitable diagram, assess the effectiveness of a rent cap in solving the problems of the London housing market.

(12)

London housing market have recently reached "soaring" prices which have led to many people not being able to afford a house. Setting a price cap would increase the quantity of homes bought by consumers, as more of them would be able to afford it. On the other hand, correcting the market failure and making government intervention successful. On the other hand, it might lead to a decrease in supply, as not as many would constructors would be willing to build new buildings if the profits made from them are lower. In conclusion, I believe that a rent cap would make the problems worse, as many people would be able to find inexpensive housing at first, but in the

long run, suppliers would stop entering the market and no more houses would be built, leading to even greater scarcity of homes available for rent. Other measures such as subsidising London workers or introducing government aid for mortgage payment would prove way more effective in the long run.

### ResultsPlus Examiner Comments

Accurate knowledge and understanding supported by an accurate diagram. There is some awareness of competing arguments although this lacks balance. A conclusion is present although this just repeats previous points made.

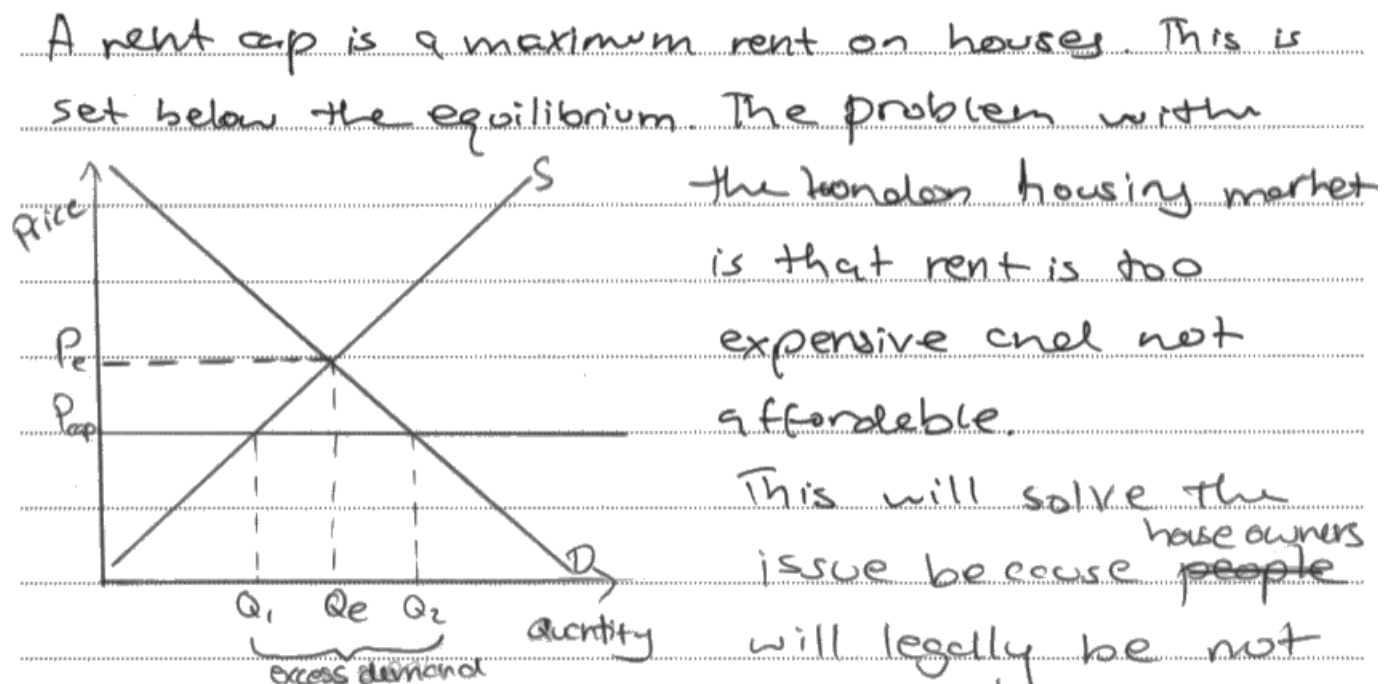

### ResultsPlus Examiner Tip

A conclusion is a good way to end the longer questions but don't just repeat previously made points. Try and sum up the opposing ideas and add something new by way of evaluation.

Also a L3 response but just 6 marks.

(c) Using a suitable diagram, assess the effectiveness of a rent cap in solving the problems of the London housing market.

(12)

allowed to set rent ~~at~~ an inflated rate. This will reduce the number of people emigrating out of London to low paid jobs. However the problem with this is that house owners may start taking part in illegal activities like charging more rent illegally than allowed. Another issue with rent caps is that it creates excess ~~to~~ demand for housing. This is because more people are willing to pay the lower rent but less home owners are willing to supply it as it is not ~~at~~ profitable. Therefore it distorts the price signal, making the rent cap ineffective. There may be more people homeless due to this which does not ~~is~~ solve the problem.

The rent cap will protect rent payers from unfair yearly rises. However this will policy discourage investment into the housing market which can be potentially damaging for the economy. For example aggregate demand will fall leading to slow down economic growth.

In conclusion, rent caps are not a successful method of intervention as it discourages investment, ~~causing~~ encourages growth of black market and distorts price signal.

**ResultsPlus**  
Examiner Comments

The diagram is partially complete and the chains of reasoning are not developed fully enough.

## Question 2 (d)

This was the least well answered question on the paper for most candidates. Clearly for some, timing had been an issue, as no valid attempt at the question had been made. For those candidates that were able to make an attempt, many seemed to miss the focus of the question, and provided very descriptive and generic answers. Often candidate responses were focused at a national level, which did not allow them to analyse the differences within regions.

Many candidates failed to understand that the question was about solving the problems of structural unemployment and the occupational and geographical immobility of labour. Responses to this question rarely used the data in a sophisticated manner and so struggled to access the higher levels. A significant number of candidates quoted the figures but did little with them.

Stronger candidates used the data to help discuss the successes and failures of policies, and were able to balance this by arguing that the disappearance of key industries would require significant time and investment to rectify variations.

This response reached L3 and 13 marks.

(d) With reference to Figures 4 and 5, evaluate the success of UK government policies in reducing regional variations in unemployment.

(20)

The UK government has implemented policies to reduce variations in unemployment in the UK through fiscal policy. Now UK unemployment is fairly low standing at 2.7% but this figure varies from region to region.

Figure 4 and 5 suggest that the UK government has not been successful in reducing regional variations in unemployment. For example, they suggest that unemployment is much more common in the North of England rather than the South. This is evident as the North East and West only had employment rates of 76% and 72% respectively, whilst in August 2015 whilst the South East had employment rates of 79%

in August 2015. In turn this shows that there are ~~at~~ ~~South East~~ more jobs in the South East and that the government has not been very successful in solving this regional variation in unemployment that may lead to regional inequality around the UK.

However, the UK government has seen some success in ~~the~~ reducing variations in unemployment. This is evident as the ~~South~~ North ~~West~~ has seen an increase in employment rates from 2014 to 2015 with ~~72%~~ only 71% <sup>employment rates</sup> rising to 72%. In turn government policies has led to less <sup>un</sup>employment in the North West causing a positive multiplier effect which could reduce regional inequality in ~~the~~ the UK. However, the North East or the other had has experienced in a reduction in employment rates <sup>from 2014 to 2015 (68% → 66%)</sup> in ~~the~~ the UK once again showing the limited success of the UK government in ~~so~~ reducing regional variations in unemployment.

Furthermore, whilst the North has struggled to have increased employment levels, much of the South of England have experienced huge increases in employment levels due to government policies. For example, the ~~UK~~ South West's employment rates have increased from 76% in 2014 to 78% in 2015 ~~show~~ despite there

~~was~~ already good employment rate. ~~to~~ This may be because the government subsidised many ventures in Cornwall to increase Tourism in turn creating more regional variations in

unemployment levels and increasing

~~the average~~ regional inequality as a result showing the failure of the UK's government's policies to reduce regional variations in unemployment everywhere.

However, the UK government's policies have been successful in reducing regional variations in employment to an extent.

For example, Wales employment rate has increased from 68% to 71% (Total for Question 2 = 50 marks)

allowing it to catch up to ~~the~~ other regions with

better unemployment rates. This is possibly due to the UK government policy for providing subsidies for industries like steel production, without which, more people would be unemployed there, resulting in less regional inequality in terms of Wales and the UK average. showing the success of some government policies in reducing regional variations in unemployment in some regions.

**TOTAL FOR SECTION B = 50 MARKS**

**TOTAL FOR PAPER = 100 MARKS**

To conclude, overall I do not think that the UK government has been successful in increasing

regional variations in employment levels in the UK as despite some regions being less varied, many barriers have increased despite the variations.

**ResultsPlus**

**Examiner Comments**

A good L3 response that tries to use the evidence to support the chains of reasoning. The analysis is not always fully developed and there is some awareness of competing arguments. A conclusion is presented but is not fully convincing.

(d) With reference to Figures 4 and 5, evaluate the success of UK government policies in reducing regional variations in unemployment.

(20)

Unemployment occurs when a ~~person~~ person who is willing and able to work of legal age cannot find a job.

Most of the policies that can be used to affect unemployment are supply side policies, although fiscal and monetary policies can also be adapted to reduce it.

The UK has recently invested large amounts of capital ~~on~~ on education and reeducational programmes to avoid ~~the~~ occupational unemployment. This has worked in some areas such as Wales, which have had a large increase (according to figure 4) in employment from 2014 to 2015. On the other hand it has failed to do this in North West, where unemployment is now even larger.

It has also spent large amounts of capital on infrastructure (roads and airports), which has reduced unemployment due to geographical immobility in areas such as West Midlands, but has been unsuccessful in other zones such as Scotland.

The UK has also maintained its record low 0.5% base rate to encourage economic growth, which increases employment due to increased overall economic activity.

Anyway according to data from figure 4 and 5, it has failed to reduce unemployment in areas

such as Scotland, which highlights that not only has unemployment increased overall, but that the government has also failed to reduce regional unemployment.

**ResultsPlus**

**Examiner Comments**

A brief response with some elements of knowledge and understanding and some use of evidence but chains of reasoning are incomplete and isolated. It may be that timing was an issue here.

**ResultsPlus**

**Examiner Tip**

Always leave enough time for the final question and make full use of all the data presented.

## Paper Summary

Based on their performance on this paper, candidates are offered the following advice:

- The case study should be thoroughly prepared and real-life examples researched to reinforce discussion.
- QS skills account for 20% of available marks, more details in the specification.
- Practice and preparation of key diagrams is crucial.
- It is well worth looking carefully at the level descriptors and taking time to understand what they mean.
- There is a lot of data in this paper, take the time to read through it all carefully before starting your answers.
- Watch your timing and do not spend too long on the shorter questions.

## Grade Boundaries

Grade boundaries for this, and all other papers, can be found on the website on this link:
