9.	5	
Total	50	

ADDITIONAL MATERIALS

In addition to this paper, you will need a calculator.

INSTRUCTIONS TO CANDIDATES

Use black ink, black ball-point pen or your usual method.

Write your name, centre number and candidate number in the spaces provided on the front cover.

Answer ALL the questions in the spaces provided. You may use continuation paper on pages 24-25 if necessary, taking care to number the continuation correctly.

INFORMATION FOR CANDIDATES

Mark allocations are shown in brackets. This paper has a total of 50 marks.

5

2. In 2010 Toyota’s Burnaston car manufacturing factory produced about 130,000 cars with 2600 employees. In 2012, the same factory produced around 110,000 cars with 2750 employees.

Define productivity and calculate the apparent change in productivity between 2010 and 2012. [3]

3

Price per unit (£)

3. The diagram opposite represents a market for a product before and after the imposition of a specific sales tax. The tax shifts the supply curve from S to $S+t$.

(a) Calculate the consumer surplus after the imposition of the tax. [2]

3(b) Calculate the government's total tax revenue after the imposition of the tax. [2]

4

4. WATER COMPANIES' PRICES CONTROLLED BY REGULATOR

Ofwat, the water industry regulator, has set limits on how much the price of water bills to households can rise over the next few years. Households in the UK have no choice of water provider as firms such as Welsh Water are monopolies in their own regions.

How might uncontrolled market power of such monopolies result in market failure? [3]

10

3

ETS CARBON

PRICE

€ per tonne

5. The PRICE OF CARBON fell below €5 a tonne for the first time on the European Union's Emissions Trading System. A glut of pollution permits has caused carbon prices to fall by 70% since 2011, providing little incentive for companies to cut emissions rather than pay for the permits. Officials want to withdraw some of the permits in the hope that the price will rise.

SOURCE: ECONOMIST 26/1/13

- (a) Using a diagram explain why a reduction in the number of pollution permits would raise their price. [4]

14

10

- 6. **Air passenger duty (APD) was introduced in 1994 as part of the government’s policy to reduce carbon emissions. By increasing the price of tickets for air travellers it was hoped that fewer people would travel by air. However by 2013, with APD at £13, a report found that to avoid paying the tax many travellers took connecting flights via European airports such as Amsterdam to avoid paying the tax in the UK. This practice has apparently increased emissions from extra journeys. The same report found that by abolishing the tax altogether 60,000 jobs would be created, GDP would rise by 0.46% and the government’s tax revenue would actually rise!**

Using the data explain the meaning of the term government failure. [4]

8. JOBCENTRE REPORTS 2,000 JOBS ON OFFER IN HULL, BUT NO TAKERS

Jobseekers and employers are being urged to be less choosy as new figures show more than 2,000 vacancies are going unfilled in Hull.

The city has some of the highest rates of unemployment in the country, with 8.3 per cent of the population claiming jobseeker's allowance, more than double the national average of 3.8 per cent.

9. The diagram opposite shows a £5 tariff being imposed on an imported product with a world price of £15.

(a) By how much will imports fall as a result of the tariff? [1]

(b) What will be the government's revenue as a result of the tariff? [1]

9(c) With reference to the diagram, explain how domestic producers might benefit from the imposition of tariffs. [3]
