Systems, Applications and Implications

Mark Scheme for June 2010

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2010

Any enquiries about publications should be addressed to:

OCR Publications PO Box 5050 Annesley NOTTINGHAM NG15 0DL

Telephone: 0870 770 6622 Facsimile: 01223 552610

E-mail: publications@ocr.org.uk

| Sect | ion A | | | |
|------|-------|---|-------|--|
| Que | stion | Expected Answer | Marks | Additional Guidance |
| 1 | (a) | Describe prototyping as a method of software development. One mark for point, one for expansion eg: • position in the systems life cycle (1) • a model is built (1) to enable an approved version to be put into production (1) • an iterative process of design and evaluation (1) repeated until an interface is satisfactory to the user (1) • a working user interface is created (1) which does not process any data (1) | [2] | One mark can be awarded for accurately placing in the systems life cycle. |
| 1 | (b) | Explain the importance of test plans in the systems cycle. One mark for point, one for expansion eg: plans to test the system's performance against the design specification (1) allows discrepancies to be identified (1) describes each item that needs to be tested (1) specifies how each test will be carried out upon it (1) identifies input values and shows expected output values (1) documents test details for repeat of tests (1) documents the testing strategy (1) through the normal, extreme and erroneous test values used (1) | [4] | |

| Question | Expected Answer | Marks | Additional Guidance |
|----------|---|-------|---------------------|
| 2 (a) | Identify three characteristics of a local area network (LAN). Any three from: • within a locally defined area (1) • connected by high speed connections (1) • can have direct connections between machines (1) • connected by cables owned by the company (1) • able to share local peripherals (1) | [3] | |
| 2 (b) | Compare an intranet to an extranet. Must be a comparison. 1 mark for each comparison to max 3: Topics for comparison may include, for example: services • an intranet provides an organisation with services that are only available to authorised users whereas an extranet allows public access to part, or all, of a company's intranet services via the Internet (1) access • an organisation's intranet does not have to provide Internet access whereas an extranet is accessed using the Internet (1) security • an intranet requires usernames and id's similarly an extranet is only available to approved parties (1) connectivity • an intranet is a secure private computer network using an organisation's communications infrastructure whereas an extranet uses public telecommunication systems to securely share part of an organization's information (1) | [3] | |

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|---|-------|--|
| 3 | (a) | Define the term bandwidth. One mark for point, one for expansion eg a measurement of the volume of data (1) per second (1) rate of transmission (1) in bps (1) the difference between the maximum and minimum frequency of signal (1) that a communications channel can carry (1) measure of the capacity (1) of a network/communications channel (1) maximum amount of data (1) in a given time (1) | [2] | A mark should be awarded for an answer relating to capacity/volume or rate of transmission. The second mark should be a continuation of the first point and relate to a time frame or channel of communication. |
| 3 | (b) | Describe how different communication media affect the bandwidth available. One mark for point, one for expansion eg different media have different bandwidths (1) and therefore different data carrying capabilities (1) capacity of the medium (1) affected by factors such as signal strength and noise (1) the more data that can travel across the bandwidth the higher the risk of collision and error (1) requiring retransmission and increased network traffic (1) the higher the data rate of a particular medium results in more data transmission (1) in a given time (1) freeing bandwidth for subsequent transmission (1) | [4] | A candidate can not gain more than two marks solely for the identification of points. Allow interpretation of 'media' type of file being transferred. Allow suitable examples. |

G063 Mark Scheme June 2010

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|---|-------|--|
| 3 | (c) | Describe three disadvantages of using wireless communication in the home. One mark for point, one for expansion to a Max of 3 bullet points eg • obstructions (1) such as furniture, floors, walls (1) can reduce signal strength (1) • other electronic equipment (1) can interfere with signal transmission (1) • each wireless router needs to operate on a different frequency (1) to avoid interference (1) • signals can be picked up from outside the home (1) leading to issues of security (1) • distance from base station (1) can reduce signal reception (1) • concurrent downloads by multiple users (1) reduces bandwidth capacity (1) | [6] | A candidate can not gain more than three marks solely for the identification of disadvantages. |
| | | | | |

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|--|-------|---|
| 4 | (a) | Describe what is meant by an expert system. Any three from: a computer program that attempts to solve a problem/ draws conclusions (1) in the same way as a (human) expert (1) it has a knowledge base/inference engine/user interface (1) narrow range of expertise (1) can learn from experience/heuristic (1) asks questions based on previous response (1) based on probabilities not certainties (1) | [3] | |
| | | | | |
| | (b) | Give two reasons why the operator of a medical helpline would use a system which relies on rules and probabilities to give advice. One mark for each reason: can use predictions (1) can give conclusions (1) give evidence for conclusions (1) dynamic (1) allow example of system working (1) no need for expert to man the helpline (1) | [2] | |
| 5 | | Describe two advantages to the centre of having its staff abide by its code of conduct. One mark for identification of an advantage, one for description: • discipline employees (1) against a publicised set of regulations (1) • sets out rights (1) of what can and cannot be done (1) • can be changed (1) outside of contract (1) • employees to take blame (1) not company (1) | [4] | A candidate can not gain more than two marks solely for the identification of advantages. |

| Explain the need for adaptive, perfective and corrective maintenance of systems. One mark for identification, one for expansion eg: Max 2 for each type eg: adaptive maintenance will be needed if changes in working practices are identified (1) or the needs of the organisation change (1) or the organisation expands (1) perfective maintenance makes the system work better (1) if new technology shows that the performance of the system could be improved (1) improving for example the speed of searches (1) corrective maintenance used when the system is not functioning properly (1) fixes bugs in the system (1) | Question | Expected Answer | Marks | Additional Guidance |
|---|----------|---|-------|---------------------|
| | 6 | corrective maintenance of systems. One mark for identification, one for expansion eg: Max 2 for each type eg: adaptive maintenance will be needed if changes in working practices are identified (1) or the needs of the organisation change (1) or the organisation expands (1) perfective maintenance makes the system work better (1) if new technology shows that the performance of the system could be improved (1) improving for example the speed of searches (1) corrective maintenance used when the system is not functioning properly (1) fixes bugs in the system | [6] | |

| Section B | | | |
|-----------|--|-------|---|
| Question | Expected Answer | Marks | Additional Guidance |
| | Questions 7-12 concern a hotel chain in the UK. The directors of a hotel chain have reviewed the systems currently in place across all the hotels. | | |
| 7 (a) | Describe critical path analysis as a tool for project planning. eg: • shows the relationships between parts of a project (1) and the time each part will take to complete / EST and LFT / the overall time it will take to complete (1) • allows the project manager to identify the critical path for each part (1) which is the order they have to be done in (1) • if one part is delayed (1) the entire project will not meet the final deadline (1) • once the time for each part is established (1) the critical path is the one that has the maximum time (1) • allows the project manager to identify tasks that may run over time (1) in order to divert additional resources (1) | [4] | Expect to see vague answers, but be careful of awarding a mark for ramblings that do not address the role of CPA. The vocabulary may differ to the mark scheme but if the candidate has gone into a lot of related depth, then the second mark for each identified statement should be available. Be generous with genuine attempts, but do not award out of sympathy. Bullets are not discrete answers and candidates may answer from a number of bullets. All 4 marks can be gained for a single description. |

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|---|-------|---|
| 7 | (b) | Draw an entity relationship diagram for this part of the database and state where a foreign key would be found. | | The diagram itself must be accurate. It would be nice to think that entities will be drawn with a ruler, but do not penalize the candidate in any way if they are not. |
| | | CUSTOMER BOOKING ROOM | | |
| | | a customer can book many rooms a booking can consist of many rooms | | |
| | | 1 for correct link entity 1 for correct degree of relationship between CUSTOMER and ROOM 1 for correct degree of relationship between ROOM and BOOKING 1 for locating the foreign key in ROOM when | | |
| | | identified as the link entity | [4] | |

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|---|-------|---|
| 8 | (a) | Describe the user interface design tool known as the Model Human Processor. • (draws an analogy between) the processing and storage of a computer (1) with the perceptual, cognitive, motor and memory activities of a human (1) | [2] | Allow examples in lieu of the expansion for the second mark. |
| | | | | |
| 8 | (b) | Describe how the model can be applied to the design of the user interface. One mark for point, one for expansion eg a logical order (1) to the inputs will be initiated (1) a flashing cursor (1) will indicate where the user is to enter data (1) a beep may sound (1) when a mistake is made (1) a visual or audible stimulus is captured (1) for example attention drawn to box on screen (1) the physical attributes of the stimulus are decoded (1) for example the human interprets the response needed (1) a motor response is initiated (1) the human clicks a mouse (1) | [4] | A description is needed. Bullets are not discrete answers and candidates may answer from a number of bullets. All 4 marks can be gained for a single description. |

| 8 | | Explain how the following affect the design of an interface: | | |
|---|---------|--|-----|--|
| 8 | (d)(i) | Attention Any two; will be maintained by the consistent use of colour/layout (1) each screen clearly labelled/salient points obvious (1) use of logical menus (1) the user will have a limited attention span (1) use of flashing/inverse video/pop-up messages/sounds/alternative technique to draw attention to something (1) | [2] | |
| 8 | (d)(ii) | Memory Any two; the interface should be uncluttered (1) the customer will use the interface infrequently (1) the short term memory will be involved (1) page layouts should remain consistent (1) links to pre-existing knowledge (1) | [2] | |

| Que | stion | Expected Answer | Marks | Additional Guidance |
|-----|-------|---|-------|---|
| 9 | (a) | Describe three different approaches to the distribution of databases. One mark for method, one for expansion: • partitioned between sites / hotels (1) each separate hotel in the chain holds data on that particular site (1) • partitioned horizontally(1) database split between sites/departments by records (1) • partitioned vertically (1) database split between sites/departments by fields (1) • database duplicated between sites (1) a full copy of the database is held at each hotel (1) • one central database (1) relevant/site specific indexes are held at each hotel (1) | [6] | Be mindful of looking for this explanation rather than awarding a further mark for what amounts to a re-wording of the first point. A candidate can gain a maximum of three marks for only identifying approaches. |
| 9 | (b) | Describe three security issues that are associated with distributed databases. One mark for security issue, one for expansion eg • risk of virus (1) can spread from one database to others (1) • increased risk of hacking (1) because of multiple locations (1) • unencrypted data (1) greater risk of interception during transmission (1) • control of access to data (1) to ensure only those who need access are authorised (1) • risk of data not being synchronised (1) when updating databases (1) • physical security (1) to areas containing access points (1) | [6] | |

| Que | stion | Expected Answer | Marks | Additional Guidance | |
|-----|-------|--|-------|---|--|
| 9 | (c) | Describe four recommendations that you would make to the directors of the hotel chain to make the distributed databases more secure. One mark for recommendation, one for expansion eg user names/ passwords (1) to prevent unauthorised access (1) use of secure links (1) for updating database (1) virus protection / anti-spyware (1) updated regularly (1) at each location (1) firewall (1) to examine/control data coming into and out of the system (1) access levels/rights (1) limits what each individual can do/see (1) individual made responsible for security/physical security at each location (1) locked doors/security patrols/only authorised people allowed in (1) auditing of database changes (1) transaction logs (1) audit trail (1) to see who has accessed what data (1) encryption of data (1) to protect data when moving through public networks (1) | [8] | Candidates need to identify what they are talking about for the recommendation mark before getting the second mark for an expansion. Max 4 for no expansion. | |
| 1 | | | | | |

| Question | Expected Answer | | Additional Guidance |
|----------|--|-----|---|
| 9 (d) | State what is meant by authentication. One from: ensures who sent and who received the data (1) ensures the person is who they say they are (during transmission) (1) two parties need to know what authentication is being used in order to access/unscramble the data (1) | [1] | Do not accept answers involving 'authorisation'. |

| Ques | stion | Expected Answer | Marks | Additional Guidance | |
|------|-------|--|-------|---------------------|--|
| 10 | (a) | Give four factors affecting decisions which must be made when upgrading software. Any four from: • have to take into account the expertise of the current staff (1) • the cost of retraining the staff (1) • the benefits that the new system would bring (1) • the disruption that would be caused by retraining and changeover (1) • the nature of the current system (1) • the method of implementation (1) • the time-scale of the changeover (1) • testing once changeover had occurred (1) • software compatibility with the existing data/hardware (1) • consultation with the staff (1) | [4] | | |
| 10 | (b) | Describe parallel installation. One for point, one for expansion eg • both systems run (1) at the same time (1) • old system not abandoned (1) until confidence in new system is gained (1) • results of processing are compared (1) after a set time period (1) | [2] | | |

| Questio | on | Expected Answer | Marks | Additional Guidance |
|---------|----|---|-------|---------------------|
| 10 (c) | 5) | Give two disadvantages of this method of installation. Any two from: data duplication (1) increased administrative strain (1) / costs of staffing (1) jobs are done twice (1) / time taken (1) inconsistencies have to be checked which is time consuming (1) errors have to be located (1) increased personnel costs (1) | [2] | |
| 10 (d) | | Describe three characteristics of on-line booking systems used in hotels. One for point, one for expansion Any three from eg: types of rooms can be identified / viewed (1) with appropriate price structure (1) price bands change (1) according to time of week (1) calendar (1) to fill in arrival and departure dates (1) area to enter personal details (1) to pre-register at the hotel (1) drop down lists (1) to select number of nights, adults, children and rooms (1) booking cancellation/check booking facility (1) to track future stays (1) search facility (1) to find locations of hotels (1) check availability (1) before making further travel plans (1) alternative dates (1) to fit particular requirements (1) go backwards and forwards to change details (1) without losing all pre-entered information (1) confirmation of booking generated (1) to present at reception (1) | [6] | |

| • | secure payment facility (1) able to deal with all methods of payment (1) ability to deduct discounts on payment (1) for reward scheme participants (1) facilitate concurrent users (1) whilst avoiding double booking (1) | |
|---|---|--|
| | | |

| It is a | It is a banded response, with L, M and H and a mark for a conclusion giving a total of 11. | | | | |
|---------|--|---|--|--|--|
| | 9-11 | 4 | The candidate is able to discuss clearly the impact and consequences. Candidates will show a detailed level of understanding and be able to explain in detail both the impacts and consequence s of more than one position. Logical arguments are produced to demonstrate a clear understanding of the question. Ideas will be expressed clearly and fluently using specific knowledge to support and inform the discussion. There may be a reasoned conclusion. Subject specific terminology will be used accurately and appropriately. | | |
| | 6-8 | 3 | The candidate is able to discuss the impact(s) and consequences(s) Candidates will show a limited understanding and be able to explain, at least one impact and associated consequence of a given position, however explanations may lack specific detail and/or concentrate on either an impact or consequence with a limited explanation of the other. Subject specific terminology will be used accurately and appropriately. | | |
| | 3-5 | 2 | The candidate is able to explain the impact(s) or consequences(s) Candidates will show a limited understanding and be able to explain, at least one impact or consequence of a given position, however explanations may lack specific detail. The explanation, though informed, may stray from the point but specific knowledge will be evident. Some subject specific terminology will be used. | | |
| | 0-2 | 1 | The candidate is able to describe superficially the impact or consequences. The information may be poorly expressed and may be in the form of a list of points. Subject specific terminology may be limited or missing. | | |

| | Points for discussion may include for example; changes in the economy changes in international markets changes in individual spending patterns external changes in technology | |
|--|--|--|
| | changes in legislation pressure from shareholders competition | |
| | | |

| | | | evelopments that might change the way hotels function in the future. unication will be assessed in your answer to this question. | |
|--|------|---|--|--|
| | | | nd H and a mark for a conclusion giving a total of 11. | |
| | 9-11 | 4 | The candidate is able to discuss clearly the impact and consequences. Candidates will show a detailed level of understanding and be able to explain in detail both the impacts and consequence s of more than one position. Logical arguments are produced to demonstrate a clear understanding of the question. Ideas will be expressed clearly and fluently using specific knowledge to support and inform the discussion. There may be a reasoned conclusion. Subject specific terminology will be used accurately and appropriately. | |
| | 6-8 | 3 | The candidate is able to discuss the impact(s) and consequences(s) Candidates will show a limited understanding and be able to explain, at least one impact and associated consequence of a given position, however explanations may lack specific detail and/or concentrate on either an impact or consequence with a limited explanation of the other. Subject specific terminology will be used accurately and appropriately. | |
| | 3-5 | 2 | The candidate is able to explain the impact(s) or consequences(s) Candidates will show a limited understanding and be able to explain, at least one impact or consequence of a given position, however explanations may lack specific detail. The explanation, though informed, may stray from the point but specific knowledge will be evident. Some subject specific terminology will be used. | |
| | 0-2 | 1 | The candidate is able to describe superficially the impact or consequences. The information may be poorly expressed and may be in the form of a list of points. Subject specific terminology may be limited or missing. | |

| Poin | intelligent software to note guests' activities prompts throughout guests' stay based on accumulated data chip and pin ordering and payment wireless hotspots internet access points adjusting the levels of heat, light etc automatically Intelligent materials could be used in the construction holographic representations virtual staff virtual tours personalised paging service robots as service droids sensors which activate artificial voices/ virtual PA iris scanners/voice/face recognition software recognises guests personalised messages displayed or projected as guests move round the hotel | |
