# A-level FURTHER MATHEMATICS

Paper 1

Exam Date Morning Time allowed: 2 hours

### **Materials**

For this paper you must have:

- The AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

### Instructions

- Use black ink or black ball-point pen. Pencil should be used for drawing.
- Answer all questions.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do not use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

## **Advice**

Unless stated otherwise, you may quote formulae, without proof, from the booklet. You do not necessarily need to use all the space provided.

Answer all questions in the spaces provided.

1 A vector is given by  $\mathbf{a} = \begin{bmatrix} 2 \\ -1 \\ -3 \end{bmatrix}$ 

which vector is **not** perpendicular to **a**? Circle your answer.

[1 mark]

Use the definitions of $\cosh x$ and $\sinh x$ in terms of $e^x$ and $e^{-x}$ to show that $\cosh^2 x - \sinh^2 x \equiv 1$	
	[2 marks]

2	(م)	Civon	that
3 (	a	Given	เทลเ

3 (b)

$$\frac{2}{(r+1)(r+2)(r+3)} \equiv \frac{A}{(r+1)(r+2)} + \frac{B}{(r+2)(r+3)}$$

ind the values of t	he integers $A$ and $B$	[2 marks
Jse the method of	differences to show clearly that	
Jse the method of		
Use the method of	differences to show clearly that $\sum_{r=9}^{97} \frac{1}{(r+1)(r+2)(r+3)} = \frac{89}{19800}$

A stud	dent state	s that $\int_{0}^{\frac{\pi}{2}}$	$\frac{\cos x + \sin x}{\cos x - \sin x}$	$\mathrm{d}x$ is not an i	mproper integr	al because	$\frac{\cos x + \sin x}{\cos x - \sin x}$
is defi	ined at bo	oth $x = 0$	and $x = \frac{\pi}{2}$				
Asses	ss the vali	dity of the	e student's a	rgument.			
							[2 marks

5	$p(z) = z^4 + 3z^2 + az + b, \ a \in \mathbb{R}, b \in \mathbb{R}$	
	2-3i is a root of the equation $p(z) = 0$	
5 (a)	Express $p(z)$ as a product of quadratic factors with real coefficients.	[5 marks]
5 (b)	Solve the equation $p(z) = 0$ .	[1 mark]

6 (	(a)	Obtain th	ne general	solution	of the	differential	equation
-----	-----	-----------	------------	----------	--------	--------------	----------

$$\tan x \, \frac{\mathrm{d}y}{\mathrm{d}x} + y = \sin x \tan x$$

where  $0 < x < \frac{\pi}{2}$ 

[5 marks]

6 **(b)** Hence find the particular solution of this differential equation, given that  $y = \frac{1}{2\sqrt{2}}$ 

when  $x = \frac{\pi}{4}$ 

[2 marks]

$$x - y + kz = 3$$

$$kx - 3y + 5z = -1$$

$$x - 2y + 3z = -4$$

Where k is a real constant. The planes do not meet at a unique point.

7 (a)	Find the possible values of $k$	[3 marks		

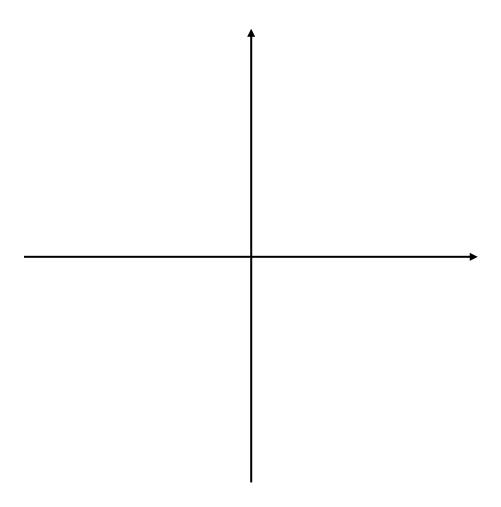

There are two possible geometric configurations for the given planes.				
Identify each possible configurations, stating the corresponding value of $\boldsymbol{k}$				
Fully justify your answer.  [5 marks				
Given further that the equations of the planes form a consistent system, find the solution				
of the system of equations.  [3 marks]				

8 A curve has equation

$$y = \frac{5 - 4x}{1 + x}$$

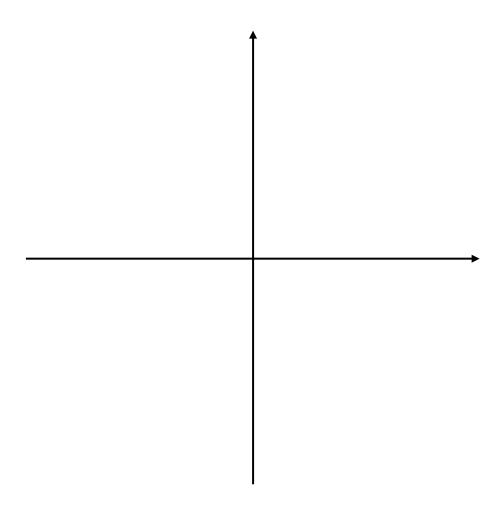

8 (a) Sketch the curve.

[4 marks]

8 **(b)** Hence sketch the graph of  $y = \left| \frac{5 - 4x}{1 + x} \right|$ .

[1 mark]

9			Cartesian equations $x - p = \frac{y + 2}{q} = 3 - z$ and the plane $\pi$ has
	equation <b>r</b> .	1  -1  -2	+ 3 = 0

9	(a)	In the case where the plane fully contains the line, find the values of $\boldsymbol{p}$ and $\boldsymbol{q}$ .	[3 marks]
9	(b)	In the case where the line intersects the plane at a single point, find the range of $p$ and $q$ .	of values [3 marks]

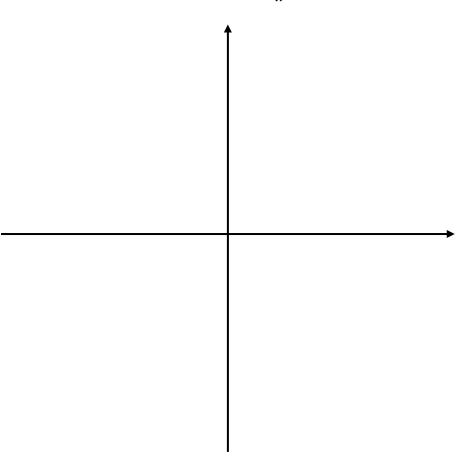

9	(c)	In the case where the angle $\theta$ between the line and the plane satisfies $\sin\theta = \frac{1}{\sqrt{6}}$ at the line intersects the plane at $z=0$	and
9	(c) (i)	Find the value of $q$ . [4 n	narks]
9	(c) (ii)	Find the value of $p$ . [3 n	narks]

10	The curve $C$ has equation $v$ -	$\boldsymbol{\mathcal{X}}$
10	The curve, $C$ , has equation $y =$	cosh r

10 (a)	Show that the x-coordinates of any stationary points of C satisfy the equation $tanh x = \frac{1}{2}$	
	X.	_
	[3 marks	3]

**10 (b) (i)** Sketch the graphs of  $y = \tanh x$  and  $y = \frac{1}{x}$  on the axes below.

[2 marks]

10	(b) (ii)	Hence determine the number of stationary points of the curve ${\it C}$ .	[1 mark]
10		$\frac{1}{2} \int_{0}^{\infty} d^{2}v d^{2}v dv dv$	
10	(c)	Show that $\frac{d^2y}{dx^2} + y = 0$ at each of the stationary points of the curve $C$ .	[4 marks]

11 (a)	Prove that $\frac{\sinh \theta}{1 + \cosh \theta} + \frac{1 + \cosh \theta}{\sinh \theta} \equiv 2 \coth \theta$	
	Explicitly state any hyperbolic identities that you use within your proof.	[4 marks]
11 (b)	Solve $\frac{\sinh \theta}{1 + \cosh \theta} + \frac{1 + \cosh \theta}{\sinh \theta} = 4$ giving your answer in an exact form.	
		[2 marks]

12	The function $f(x) = \cosh(ix)$ is defined over the domain $\{x \in \mathbb{R} : -a\pi \le x \le a\pi\}$ , where $a$ is a positive integer.
	By considering the graph of $y = [f(x)]^n$ , find the mean value of $[f(x)]^n$ , when $n$ is a positive odd number.
	Fully justify your answer.
	[3 marks]
	•

	1 1	1			3"	3" '	3"		
Given that <b>M</b> =	1 1	1	, prove that	$\mathbf{M}^n =$	$3^{n-1}$	$3^{n-1}$ $3^{n-1}$	$3^{n-1}$ $3^{n-1}$	for all $n \in \mathbb{N}$	
	L	.]			L	J	ر ک		[5 m

14	A particle, P, of mass $M$ is released from rest and moves along a horizontal straight line through a point O. When P is at a displacement of $x$ metres from O, moving with a speed $v$ ms <sup>-1</sup> , a force of magnitude $ 8Mx $ acts on the particle directed towards O. A resistive						
	force, of magnitude 4 $Mv$ , also acts on P.						
14 (a)	Initially P is held at rest at a displacement of 1 metre from O. Describe completely the motion of P after it is released.						
	Fully justify your answer.  [8 marks]						

14 (b)	It is decided to alter the resistive force so that the motion of P is critically damped.
	Determine the magnitude of the resistive force that will produce critically damped motion  [4 marks

An isolated island is populated by rabbits and foxes. At time t the number of rabbits is x and the number of foxes is y.

It is assumed that:

- The number of foxes increases at a rate proportional to the number of rabbits.
   When there are 200 rabbits the number of foxes is increasing at a rate of 20 foxes per unit period of time.
- If there were no foxes present, the number of rabbits would increase by 120% in a unit period of time.
- When both foxes and rabbits are present the foxes kill rabbits at a rate that is equal to 110% of the current number of foxes.
- At time t = 0, the number of foxes is 20 and the number of rabbits is 80.

15 (a) (i)	Construct a mathematical model for the rate of change of the number of rabbits	s. <b>[9 marks]</b>

15 (a) (ii)	Use this model to show that the number of rabbits has doubled after approximately 0.7
	units of time.
	[1 mark]

Suggest one way in which the model that you have used for the rate of change of the number of rabbits could be refined.  [1 mark]
