

ADVANCED General Certificate of Education 2009

Mathematics

Assessment Unit C3 assessing Module C3: Core Mathematics 3

[AMC31]

THURSDAY 28 MAY, AFTERNOON

TIME

1 hour 30 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number on the Answer Booklet provided. Answer **all eight** questions.

Show clearly the full development of your answers.

Answers should be given to three significant figures unless otherwise stated.

You are permitted to use a graphic or a scientific calculator in this paper.

INFORMATION FOR CANDIDATES

The total mark for this paper is 75

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

A copy of the Mathematical Formulae and Tables booklet is provided.

Throughout the paper the logarithmic notation used is $\ln z$ where it is noted that $\ln z \equiv \log_e z$

Answer all eight questions.

Show clearly the full development of your answers.

Answers should be given to three significant figures unless otherwise stated.

1 Differentiate:

(i)
$$\frac{x}{4-x^2}$$
 [4]

(ii)
$$(x^2 + 3)^5$$
 [3]

2 (a) Find the term in x^3 in the binomial expansion of

$$(1+2x)^{-1}$$
 [4]

(**b**) Express
$$\frac{6x-4}{(2x-1)^2}$$
 in partial fractions. [6]

3 (a) A slide in an adventure playground can be modelled by the curve

 $y = 1 + 20e^{-x}$

between x = 1 and x = 10 as shown in **Fig. 1** below.

Fig. 1

Find the shaded area.

(b) Find

$$\int \left(\frac{3}{x} - \frac{x}{5} + \sec 2x \tan 2x + 7\right) dx$$
 [5]

4 The graph of a function y = f(x) is sketched below in **Fig. 2**.

Fig. 2

On separate diagrams sketch the graphs of:

(i) $y = 3f(\frac{1}{2}x)$ [2]

(ii)
$$y = 4 - f(x)$$
 [2]

indicating the coordinates of the images of the point A.

[Turn over

[6]

3	
www.StudentBounty	papers

- 5 (i) Show that the equation $2 \ln x = x^2$ has a solution between x = 1 and x = 2
 - (ii) By taking x = 1 as a first approximation and using the Newton–Raphson method twice, find a better approximation to the solution of the equation $2 \ln x = x^2$ [5]
- 6 A particle travels in a straight line in such a way that its distance *x* metres from a fixed point O at time *t* seconds can be given by the equation

$$x = 4 + \sqrt{3}\sin 2t + \cos 2t$$

- (i) Find the initial distance of the particle from O. [1]
- (ii) Find the rate of change of the distance of the particle from O at time *t*. [3]
- (iii) Hence find the first time when the particle is at its greatest distance from O. [7]
- 7 (a) Solve the equation

$$\sec(2\theta - 30^\circ) = -\frac{2}{\sqrt{3}}$$

- for $-180^{\circ} < \theta < 180^{\circ}$ [7]
- (b) Prove the identity

$$(\csc^2\theta - 1)(\tan^2\theta + 1) \equiv \csc^2\theta$$
[7]

8 Find the equation of the normal to the curve

$$y = x^2 \ln(3x - 2) + 5$$

at the point on the curve where x = 1
