

ADVANCED General Certificate of Education January 2012

Mathematics

Assessment Unit C4 assessing Module C4: Core Mathematics 4 [AMC41]

FRIDAY 27 JANUARY, MORNING

TIME

1 hour 30 minutes.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number on the Answer Booklet provided. Answer **all eight** questions.

Show clearly the full development of your answers.

Answers should be given to three significant figures unless otherwise stated.

You are permitted to use a graphic or scientific calculator in this paper.

INFORMATION FOR CANDIDATES

The total mark for this paper is 75

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

A copy of the Mathematical Formulae and Tables booklet is provided.

Throughout the paper the logarithmic notation used is $\ln z$ where it is noted that $\ln z \equiv \log_e z$

6952

Answer all eight questions.

Show clearly the full development of your answers.

Answers should be given to three significant figures unless otherwise stated.

1 Use the substitution u = 3x + 2 to find

$$\int \left(3x+2\right)^5 \mathrm{d}x$$
 [5]

- 2 (a) Find the distance between the points A (2, -1, 3) and B (-2, 2, -1). [2]
 - (b) Find the angle between the lines

$$\mathbf{r}_{1} = \begin{pmatrix} 1\\2\\3 \end{pmatrix} + \lambda \begin{pmatrix} 2\\1\\4 \end{pmatrix} \qquad \text{and} \quad \mathbf{r}_{2} = \begin{pmatrix} 2\\0\\2 \end{pmatrix} + \mu \begin{pmatrix} -1\\2\\1 \end{pmatrix}$$
[6]

3 A particle is moving in a straight line in such a way that its distance *d* metres from a fixed point O, *t* seconds after the motion begins, is given by

$$d = 15\sin t + 20\cos t \qquad 0 \le t \le 2\pi$$

(i) Express *d* in the form

 $r\sin(t+\alpha)$

where *r* is a positive integer and $0 < \alpha < \frac{\pi}{2}$ [3]

(ii) Hence find the maximum distance of the particle from O and the time at which it first occurs. [4]

4 (i) Sketch the function $f(x) = x^2 - 2$ where $x \ge 0$ [2]

(ii) Hence state the range of
$$f(x) = x^2 - 2$$
 where $x \ge 0$ [1]

(iii) Find the inverse function $f^{-1}(x)$ and state its domain. [4]

5 (i) If

 $x = 3 \sin \theta$ and $y = 2 \cos \theta$ find $\frac{dy}{dx}$ [3]

(ii) Find the equation of the normal to the curve given parametrically by the equations

 $x = 3 \sin \theta$ and $y = 2 \cos \theta$ at the point with parameter $\theta = \frac{\pi}{4}$ [6]

- 6 Water is draining from a storage tank. The rate of change of the depth *D* of water is proportional to the square of the depth at time *t*.
 - (i) Model this by a differential equation. [2]

The initial depth of water is 2 metres and after 5 minutes the depth has reduced to 1.5 m.

(ii) By solving the differential equation, find the time taken for the water to reduce to a depth of 0.8 m.

7 (a) Sketch the graph of

$$y = \csc x \qquad 0^{\circ} \le x \le 360^{\circ}$$
 [2]

(b) Solve the equation

$$\tan 2\theta = 4 \tan \theta \qquad 0^\circ \le \theta \le 360^\circ$$
^[9]

8 (a) (i) Rewrite
$$\frac{x+3}{4-x^2}$$
 as partial fractions. [6]

(ii) Hence find

$$\int \frac{x+3}{4-x^2} \mathrm{d}x \tag{3}$$

(b) The graph of part of the curve $y = \sec 2x \tan 2x$ is shown in Fig. 1 below.

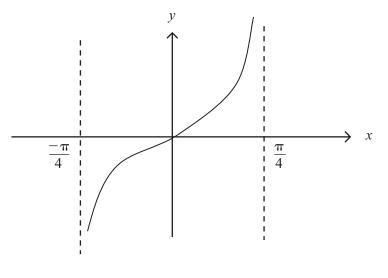

Fig. 1

Find the exact volume of the solid formed when the area between the curve

$$y = \sec 2x \tan 2x$$

and the *x*-axis between x = 0 and $x = \frac{\pi}{6}$ is rotated through 2π radians about the *x*-axis. [8]
