

MARK SCHEME for the May/June 2013 series

9709 MATHEMATICS

MMM. Hiremepapers.com

9709/32

Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2013 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

	GCE AS/A LEVEL – May/June 2013	9709	32

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol I implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0. B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking g equal to 9.8 or 9.81 instead of 10.

Page 3	Mark Scheme	Syllabus	Paper
	GCE AS/A LEVEL – May/June 2013	9709	32

The following abbreviations may be used in a mark scheme or used on the scripts:

- AEF Any Equivalent Form (of answer is equally acceptable)
- AG Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
- BOD Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
- CAO Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
- CWO Correct Working Only often written by a "fortuitous" answer
- ISW Ignore Subsequent Working
- MR Misread
- PA Premature Approximation (resulting in basically correct work that is insufficiently accurate)
- SOS See Other Solution (the candidate makes a better attempt at the same question)
- SR Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

- MR –1 A penalty of MR –1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through √" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR –2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

			GCE AS/A LEVEL – May/June 2013	9709	32	
l	EITHER	: State	or imply non-modular equation $(x-2)^2 = \left(\frac{1}{3}x\right)^2$,			
		or pa	ir of equations $x - 2 = \pm \frac{1}{3}x$		M1	
			in answer $x = 3$		A1	
		Obta	in answer $x = \frac{3}{2}$, or equivalent		A1	
	OR:		in answer $x = 3$ by solving an equation or by inspection		B1	
		State	or imply the equation $x - 2 = -\frac{1}{3}$, or equivalent		M1	
		Obta	in answer $x = \frac{3}{2}$, or equivalent		A1	[3]
2	(i)		the iterative formula correctly at least once		M1	
			in final answer 3.6840 v sufficient iterations to at least 6 d.p. to justify 3.6840, or sho	ow there is a sign	A1	
		chan	ge in the interval (3.68395, 3.68405)	-	A1	[3]
	(ii)	State	a suitable equation, e.g. $x = \frac{x(x^3 + 100)}{2(x^3 + 25)}$		B1	
		State	that the value of α is $3\sqrt{50}$, or exact equivalent		B1	[2]
	EITHER		or imply $\ln y = \ln A - kx^2$		B1	
			titute values of ln y and x^2 , and solve for k or ln A in $k = 0.42$ or $A = 2.80$		M1 A1	
		Solve	e for $\ln A$ or k		M1	
		Obta	in $A = 2.80$ or $k = 0.42$		A1	
	<i>OR1</i> :	State	or imply $\ln y = \ln A - kx^2$		B1	
			g values of ln y and x^2 , equate gradient of line to $-k$ and solve	for k	M1	
			in k = 0.42 e for ln A		A1 M1	
			$\ln A = 2.80$		A1	
	<i>OR2</i> :		in two correct equations in k and A and substituting y - and x^2	- values in		
		-	$4e^{-kx^2}$		B1	
			e for k in $k = 0.42$		M1 A1	
			e for A		M1	
		Obta	in A = 2.80		A1	[5]
			If unsound substitutions are made, e.g. using $x = 0.;64$ and $y = 0.0000000000000000000000000000000000$

	GCE AS/A LEVEL – May/June 2013	9709	32

Substitute $x = -\frac{1}{3}$, or divide by 3x + 1, and obtain a correct equation, 4 (i) e.g. $-\frac{1}{27}a - \frac{20}{9} - \frac{1}{3} + 3 = 0$ **B**1 Solve for *a* an equation obtained by a valid method M1 Obtain a = 12[3] A1 Commence division by 3x + 1 reaching a partial quotient $\frac{1}{3}ax^2 + kx$ (ii) M1 Obtain quadratic factor $4x^2 - 8x + 3$ A1 Obtain factorisation (3x+1)(2x-1)(2x-3)A1 [3] [The M1 is earned if inspection reaches an unknown factor $\frac{1}{3}ax^2 + Bx + C$ and an equation in B and/or C, or an unknown factor $Ax^2 + Bx + 3$ and an equation in A and/or *B*, or if two coefficients with the correct moduli are stated without working.] [If linear factors are found by the factor theorem, give B1B1 for (2x - 1) and (2x-3), and B1 for the complete factorisation.] [Synthetic division giving $12x^2 - 24x + 9$ as quadratic factor earns M1A1, but the final factorisation needs $\left(x + \frac{1}{3}\right)$, or equivalent, in order to earn the second A1.] [SR: If $x = \frac{1}{3}$ is used in substitution or synthetic division, give the M1 in part (i) but give M0 in part (ii).] *EITHER*: State $2ay \frac{dy}{dr}$ as derivative of ay^2 5 **B**1 State $y^2 + 2xy \frac{dy}{dx}$ as derivative of xy^2 **B**1 dv

Equate derivative of LHS to zero and set
$$\frac{dy}{dx}$$
 equal to zero M1

Obtain $3x^2 + y^2 - 6ax = 0$, or horizontal equivalentA1Eliminate y and obtain an equation in xM1

Solve for x and obtain answer
$$x = \sqrt{3a}$$
 A1

OR1: Rearrange equation in the form
$$y^2 = \frac{3ax^2 - x^3}{x + a}$$
 and attempt differentiation of one
cide

sideB1Use correct quotient or product rule to differentiate RHSM1Obtain correct derivative of RHS in any formA1Set $\frac{dy}{dx}$ equal to zero and obtain an equation in xM1Obtain a correct horizontal equation free of surdsA1Solve for x and obtain answer $x = \sqrt{3a}$ A1

OR2: Rearrange equation in the form
$$y = \left(\frac{3ax^2 - x^3}{x + a}\right)^{\frac{1}{2}}$$
 and differentiation of RHS B1

Use correct quotient or product rule and chain rule M1 Obtain correct derivative in any form A1

			GCE AS/A LEVEL – May/June 2013	9709	32	
		-	te derivative to zero and obtain an equation in x in a correct horizontal equation free of surds		M1 A1	
		Solve	e for x and obtain answer $x = \sqrt{3a}$		A1	[6]
6	(i)		correct quotient or chain rule to differentiate sec x in given derivative, sec x tan x , correctly		M1 A1	
		Use o	chain rule to differentiate y in the given answer		M1 A1	[4]
	(ii)		g d $x\sqrt{3} \sec^2 \theta d\theta$, or equivalent, express integral in terms of	heta and d $ heta$	M1	
		Obta	in $\int \sec\theta \mathrm{d}\theta$		A1	
			imits $\frac{1}{6}\pi$ and $\frac{1}{3}\pi$ correctly in an integral form of the form k	-	M1	
		Obta	in a correct exact final answer in the given form, e.g. $\ln\left(\frac{2+\sqrt{2}}{\sqrt{2}}\right)$	$\left(\frac{\sqrt{3}}{3}\right)$	A1	[4]
7	(i)	Use o	$\cos (A + B)$ formula to express the given expression in terms of	of $\cos x$ and $\sin x$	M1	
		Colle	ect terms and reach $\frac{\cos x}{\sqrt{2}} - \frac{3}{\sqrt{2}}\sin x$, or equivalent		A1	
			in $R = 2.236$ rig formula to find α		A1 M1	
			in $\alpha = 71.57^{\circ}$ with no errors seen		A1	[5]
	(ii)	Evalı 26.57	uate \cos^{-1} (2/2.236) to at least 1 d.p. (26.56° to 2 d.p., use of I_{70}	$R = \sqrt{5}$ gives	B1√ [≜]	
		Carry	y out an appropriate method to find a value of x in the interval in answer, e.g. $x = 315^{\circ} (315.0^{\circ})$	l 0°< <i>x</i> <360°	M1 A1	
		Obta	in second answer, e.g. 261.9° and no others in the given inter ore answers outside the given range.]	val	A1	[4]
			at answers in radians as a misread and deduct A1 from the ans	swers for the		
		B1, the intervention	Conversion of the equation to a correct quadratic in $\sin x$, $\cos x$ hen M1 for solving a 3-term quadratic and obtaining a value oval, and A1 + A1 for the two correct answers (candidates must to earn the final A1).]	of x in the given		
8	(i)		any relevant method to determine a constant		M1	
		Obta	in one of the values $A = 1, B = -2, C = 4$ in a second value		A1 A1	E ()
		[If A	in the third value and C are found by the cover up rule, give B1 + B1 then M12 one is found by the rule, give B1M1A1A1.]	A1 for finding <i>B</i> . If	A1	[4]
	(ii)	Separ	rate variables and obtain one term by integrating $\frac{1}{y}$ or a particular	al fraction	M1	
		Obta	in $\ln y = -\frac{1}{2} - 2 \ln (2x + 1) + c$, or equivalent		A3√ [*]	

	Page 7		labus Pap	
		GCE AS/A LEVEL – May/June 2013 9	709 32	2
		Evaluate a constant, or use limits $x = 1$, $y = 1$, in a solution containing at terms of the form $k \ln y$, l/x , $m \ln x$ and $n \ln (2x + 1)$, or equivalent	least three M	1
		Obtain solution $\ln y = -\frac{1}{2} - 2\ln x + 2\ln(2x+1) + c$, or equivalent	A	1
		Substitute $x = 2$ and obtain $y = \frac{25}{36}e^{\frac{1}{2}}$, or exact equivalent free of logarit		1 [7]
		(The f.t. is on <i>A</i> , <i>B</i> , <i>C</i> . Give $A2\sqrt[4]{}$ if there is only one error or omission in integration; $A1\sqrt[4]{}$ if two.)	the	
9	(a)	Substitute $w = x + iy$ and state a correct equation in x and y Use $i^2 = -1$ and equate real parts	B M	
		Obtain $y = -2$	A	
		Equate imaginary parts and solve for x	M	1
		Obtain $x = 2\sqrt{2}$, or equivalent, only	A	1 [5]
	(b)	Show a circle with centre 2i	B	
		Show a circle with radius 2	В	
		Show half line from -2 at $\frac{1}{4}\pi$ to real axis	В	1
		Shade the correct region	B	
		Carry out a complete method for calculating the greatest value of $ z $	M	
		Obtain answer 3.70	A	1 [6]
10	(i)	Carry out a correct method for finding a vector equation for <i>AB</i> Obtain $\mathbf{r} = 2\mathbf{i} - 3\mathbf{j} + 2\mathbf{k} + \lambda (3\mathbf{i} + \mathbf{j} - \mathbf{k})$ or	Μ	1
		$\mathbf{r} = \mu (2\mathbf{i} + 3\mathbf{j} + 2\mathbf{k}) + (1 - \mu)(5\mathbf{i} - 2\mathbf{j} + \mathbf{k})$, or equivalent	A	1
		Substitute components in equation of p and solve for λ or for μ	M	1
		Obtain $\lambda = \frac{3}{2}$ or $\mu = -\frac{1}{2}$ and final answer $\frac{13}{2}\mathbf{i} - \frac{3}{2}\mathbf{j} + \frac{1}{2}\mathbf{k}$, or equivalent	A	1 [4]
	(ii)	Either equate scalar product of direction vector of AB and normal to q to		
		substitute for A and B in the equation of q and subtract expressions Obtain $2 + b = 0$ or equivalent	M1 [*] A	
		Obtain $3 + b - c = 0$, or equivalent Using the correct method for the moduli, divide the scalar product of the		1
		p and q by the product of their moduli and equate to $\pm \frac{1}{2}$, or form horizon	ontal	
		equivalent	M1*	*
		Obtain correct equation in any form, e.g. $\frac{1+b}{\sqrt{(1+b^2+c^2)}\sqrt{(1+1)}} = \pm \frac{1}{2}$	A	1
		Solve simultaneous equations for b or for c	M1 (dep*	
		Obtain $b = -4$ and $c = -1$ Use a relevant point and obtain final answer $r = 4v = z = 12$ or equivalent	A A	A
		Use a relevant point and obtain final answer $x - 4y - z = 12$, or equivaler (The f.t. is on <i>b</i> and <i>c</i> .)	n Al	r [7]
