Further Mathematics

Advanced Subsidiary

Further Mathematics options

23: Further Statistics 1

(Part of options B, E, F and G)

You must have:

Mathematical Formulae and Statistical Tables (Green), calculator

Total Marks

--

Candidates may use any calculator allowed by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. If a calculator is used instead of the tables, the value should be given to an equivalent degree of accuracy.
- Inexact answers should be given to three significant figures unless otherwise stated.

Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- The total mark for this part of the examination is 40. There are 4 questions.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1/1/1

Pearson

1. A plumbing company receives call-outs during the working day at an average rate of 2.4 per hour.

- (a) Find the probability that the company receives exactly 7 call-outs in a randomly selected 3-hour period of a working day. (2)

The company has enough staff to respond to 28 call-outs in an 8-hour working day.

- (b) Show that the probability that the company receives more than 28 call-outs in a randomly selected 8-hour working day is 0.022 to 3 decimal places. (2)

In a random sample of 100 working days each of 8 hours,

- (c) (i) find the expected number of days that the company receives more than 28 call-outs, (1)
(ii) find the standard deviation of the number of days that the company receives more than 28 call-outs, (2)
(iii) use a Poisson approximation to estimate the probability that the company receives more than 28 call-outs on at least 6 of these days. (3)

(Total for Question 1 is 10 marks)

2. In an experiment, James flips a coin 3 times and records the number of heads. He carries out the experiment 100 times with his left hand and 100 times with his right hand.

	Number of heads			
	0	1	2	3
Left hand	7	29	42	22
Right hand	13	35	36	16

- (a) Test, at the 5% level of significance, whether or not there is an association between the hand he flips the coin with and the number of heads.

You should state your hypotheses, the degrees of freedom and the critical value used for this test.

(7)

- (b) Assuming the coin is unbiased, write down the distribution of the number of heads in 3 flips.

(1)

- (c) Carry out a χ^2 test, at the 10% level of significance, to test whether or not the distribution you wrote down in part (b) is a suitable model for the number of heads obtained in the 200 trials of James' experiment.

You should state your hypotheses, the degrees of freedom and the critical value used for this test.

(7)
