

Question 1 continued

Blank lined area for writing answers.

(Total 6 marks)

Q1

2.

**Figure 1**

A toy is formed by joining a uniform solid hemisphere, of radius r and mass $4m$, to a uniform right circular solid cone of mass km . The cone has vertex A , base radius r and height $2r$. The plane face of the cone coincides with the plane face of the hemisphere. The centre of the plane face of the hemisphere is O and OB is a radius of its plane face as shown in Figure 1. The centre of mass of the toy is at O .

(a) Find the value of k .

(4)

A metal stud of mass λm is attached to the toy at A . The toy is now suspended by a light string attached to B and hangs freely at rest. The angle between OB and the vertical is 30° .

(b) Find the value of λ .

(4)

Question 2 continued

Lined writing area for question response.

(Total 8 marks)

Q2

3.

Figure 2

The region R is bounded by the curve with equation $y = e^x$, the line $x = 1$, the line $x = 2$ and the x -axis as shown in Figure 2. A uniform solid S is formed by rotating R through 2π about the x -axis.

(a) Show that the volume of S is $\frac{1}{2} \pi (e^4 - e^2)$. (4)

(b) Find, to 3 significant figures, the x -coordinate of the centre of mass of S . (6)

Question 3 continued

Lined writing area consisting of horizontal lines for text entry.

4. A particle P moves along the x -axis. At time t seconds its displacement, x metres, from the origin O is given by $x = 5 \sin \left(\frac{1}{3} \pi t\right)$.

(a) Prove that P is moving with simple harmonic motion. (3)

(b) Find the period and the amplitude of the motion. (2)

(c) Find the maximum speed of P . (2)

The points A and B on the positive x -axis are such that $OA = 2$ m and $OB = 3$ m.

(d) Find the time taken by P to travel directly from A to B . (4)

5.

Figure 3

A small ball P of mass m is attached to the ends of two light inextensible strings of length l . The other ends of the strings are attached to fixed points A and B , where A is vertically above B . Both strings are taut and AP is perpendicular to BP as shown in Figure 3. The system rotates about the line AB with constant angular speed ω . The ball moves in a horizontal circle.

(a) Find, in terms of m , g , l and ω , the tension in AP and the tension in BP . (8)

(b) Show that $\omega^2 > \frac{g\sqrt{2}}{l}$. (2)

6.

Figure 4

A small ball of mass $3m$ is attached to the ends of two light elastic strings AP and BP , each of natural length l and modulus of elasticity kmg . The ends A and B of the strings are attached to fixed points on the same horizontal level, with $AB = 2l$. The mid-point of AB is C . The ball hangs in equilibrium at a distance $\frac{3}{4}l$ vertically below C as shown in Figure 4.

- (a) Show that $k = 10$ (7)

The ball is now pulled vertically downwards until it is at a distance $\frac{12}{5}l$ below C . The ball is released from rest.

- (b) Find the speed of the ball as it reaches C . (6)

Question 6 continued

Lined writing area for the answer to Question 6.

Q6

7.

Figure 5

A particle P of mass m is attached to one end of a light rod of length l . The other end of the rod is attached to a fixed point O . The rod can turn freely in a vertical plane about O . The particle is projected with speed u from a point A , where OA makes an angle α with the upward vertical through O and $0 < \alpha < \frac{\pi}{2}$. When OP makes an angle θ with the upward vertical through O the speed of P is v as shown in Figure 5.

(a) Show that $v^2 = u^2 + 2gl (\cos \alpha - \cos \theta)$. (4)

It is given that $\cos \alpha = \frac{3}{5}$ and that P moves in a complete vertical circle.

(b) Show that $u > 2 \sqrt{\left(\frac{gl}{5}\right)}$. (4)

As the rod rotates the least tension in the rod is T and the greatest tension is $5T$.

(c) Show that $u^2 = \frac{33}{10} gl$. (9)
