## GCE Examinations

## Pure Mathematics Module P6

Advanced Subsidiary / Advanced Level

## Paper E

Time: 1 hour 30 minutes

## Instructions and Information

Candidates may use any calculator except those with a facility for symbolic algebra and/or calculus.

Full marks may be obtained for answers to ALL questions.
Mathematical and statistical formulae and tables are available.
This paper has 8 questions.

## Advice to Candidates

You must show sufficient working to make your methods clear to an examiner. Answers without working will gain no credit.

1. The point $P$ represents a variable point $z=x+\mathrm{i} y$ in an Argand diagram where $x, y \in \mathbb{R}$.

Given that the locus of $P$ is a circle with centre $-1+\mathrm{i}$ and radius 2, find
(a) an equation of the circle in terms of $z$,
(2 marks)
(b) the points on the locus of $P$ which represent real numbers.
2. Prove by induction that $2^{n}>2 n$ for all integers $n, n \geq 3$.
(6 marks)
3. (a) By using the series expansion for $\ln (1+2 x)$ and the series expansion for $\mathrm{e}^{x}$, or otherwise, and given that $x$ is small, show that

$$
\ln (1+2 x)-2 x \mathrm{e}^{-x} \approx A x^{3},
$$

and find the value of $A$.
(b) Hence find

$$
\begin{equation*}
\lim _{x \rightarrow 0}\left(\frac{\ln (1+2 x)-2 x \mathrm{e}^{-x}}{x^{3}}\right) \tag{2marks}
\end{equation*}
$$

4. 

$$
\mathbf{A}=\left(\begin{array}{ccc}
2 & -1 & 1 \\
0 & 1 & -1 \\
-3 & 3 & 1
\end{array}\right)
$$

(a) Show that $\left(\begin{array}{l}1 \\ 1 \\ 0\end{array}\right)$ is an eigenvector of $\mathbf{A}$ and find the corresponding eigenvalue.
(b) Prove that $\mathbf{A}$ has only one real eigenvalue, showing your working clearly.
5. A transformation $T$ from the $z$-plane to the $w$-plane is defined by

$$
w=z^{2}
$$

where $z=x+\mathrm{i} y, w=u+\mathrm{i} v$ and $x, y, u$ and $v$ are real.
(a) Show that $T$ transforms the line $\operatorname{Im} z=2$ in the $z$-plane onto a parabola in the $w$-plane and find an equation of the parabola, giving your answer in terms of $u$ and $v$.
(5 marks)
The image in the $w$-plane of the half-line $\arg (z)=\frac{\pi}{4}$ is the half-line $l$.
(b) Find an equation of $l$.
(2 marks)
The parabola and the half-line in the $w$-plane are represented on the same Argand diagram. Their point of intersection is represented by $P$.
(c) Find the complex number which is represented by $P$, giving your answer in the form $a+\mathrm{i} b$ where $a$ and $b$ are real.
(4 marks)
6. It is given that $y$ satisfies the differential equation

$$
\frac{\mathrm{d} y}{\mathrm{~d} x}=x^{2}+y \cos x \quad \text { and } y=1 \text { at } x=0 .
$$

(a) (i) Use the differential equation to find expressions for $\frac{\mathrm{d}^{2} y}{\mathrm{~d}^{2}}$ and $\frac{\mathrm{d}^{3} y}{\mathrm{~d} x^{3}}$.
(ii) Hence, or otherwise, find $y$ as a series in ascending powers of $x$ up to and including the term in $x^{3}$.
(iii) Use your series to estimate the value of $y$ at $x=-0.1$
(b) Use the approximation $\left(\frac{\mathrm{d} y}{\mathrm{~d} x}\right)_{0} \approx \frac{y_{1}-y_{-1}}{2 h}$ to estimate the value of $y$ at $x=0.1$
(3 marks)

Turn over
7. Referred to an origin $O$, the points $A, B, C$ and $D$ have coordinates $(1,1,0),(3,2,5)$, $(0,-1,-4)$ and $(-2,-5,0)$ respectively.
(a) Find, in the form $\mathbf{r} . \mathbf{n}=p$, an equation of the plane $\Pi$ passing through $A, B$ and $C$.
(6 marks)
The line $l$ passes through $D$ and is perpendicular to $\Pi$.
(b) Find a vector equation of $l$.
(1 mark)
The line $l$ meets the plane $\Pi$ at the point $E$.
(c) Find the coordinates of $E$.
(4 marks)
The point $F$ is the reflection of $D$ in $\Pi$.
(d) Find the coordinates of $F$.
8. The transformation $T: \mathbb{R}^{3} \rightarrow \mathbb{R}^{3}$ is represented by the matrix $\mathbf{M}$ where

$$
\mathbf{M}=\left(\begin{array}{ccc}
2 & 1 & -1 \\
0 & 3 & 1 \\
2 & 2 & 0
\end{array}\right)
$$

(a) Find $\mathbf{M}^{-1}$, showing your working clearly.
(b) Find the Cartesian equations of the line mapped by the transformation $T$ onto the line with equations

$$
\begin{equation*}
\frac{x-1}{3}=\frac{y+1}{-3}=\frac{z}{4} . \tag{7marks}
\end{equation*}
$$
