Paper D

**MARKING GUIDE**

This guide is intended to be as helpful as possible to teachers by providing concise solutions and indicating how marks should be awarded. There are obviously alternative methods that would also gain full marks.

Method marks (M) are awarded for knowing and using a method.

Accuracy marks (A) can only be awarded when a correct method has been used.

(B) marks are independent of method marks.

## S2 Paper D – Marking Guide

1.	(a) $F(5) = 1$ $k(95 - 25 - 34) = 1; 36k = 1 \therefore k = \frac{1}{36}$	M1 A1
	(b) $P(X > 4) = 1 - F(4)$ $= 1 - \frac{1}{36}(76 - 16 - 34) = \frac{5}{18}$	M1 A1
	(c) $f(x) = F'(x) = \frac{1}{36}(19 - 2x)$ $\therefore f(x) = \begin{cases} \frac{1}{36}(19 - 2x), & 2 \leq x \leq 5, \\ 0, & \text{otherwise.} \end{cases}$	M1 A1 A1 <span style="color: red;">(7)</span>
2.	(a) Poisson e.g. J occurs singly, at random, at constant rate	B1 B2
	(b) continuous uniform e.g. initial lengths random $\therefore$ equal chance of any length 0 to 3 left over	B1 B2
	(c) binomial e.g. fixed no. of spins, two outcomes, fixed prob. of head	B1 B2 <span style="color: red;">(9)</span>
3.	(a) $H_0 : p = \frac{1}{2}$ $H_1 : p \neq \frac{1}{2}$	B1
	(b) let $X = \text{no. with mobile phones}$ $\therefore X \sim B(25, \frac{1}{2})$ $P(X \leq 7) = 0.0216; P(X \leq 17) = 0.9784$ $\therefore \text{C.R. is } X \leq 7 \text{ or } X \geq 18$	M1 M1 A1 A1
	(c) $0.0216 + 0.0216 = 0.0432$	A1
	(d) $H_0 : p = \frac{1}{2}$ $H_1 : p < \frac{1}{2}$ $P(X \leq 8) = 0.0539$ more than 5% $\therefore$ not significant	B1 M1 A1 <span style="color: red;">(9)</span>
4.	(a) let $X = \text{no. of sales per week}$ $\therefore X \sim Po(8)$ $P(X \leq 4) = 0.0996$	M1 A1
	(b) let $Y = \text{no. of sales per day}$ $\therefore Y \sim Po(\frac{4}{3})$ $P(Y > 2) = 1 - P(Y \leq 2)$ $= 1 - e^{-\frac{4}{3}}(1 + \frac{4}{3} + \frac{(\frac{4}{3})^2}{2})$ $= 1 - 0.8494 = 0.1506$ (4sf)	M1 M1 M1 A1 A1
	(c) $P(X \leq 12) = 0.9362; P(X \leq 13) = 0.9658$ $\therefore$ need 13 in stock	M1 A1 A1 <span style="color: red;">(10)</span>

5. (a)  $13 \times \frac{1}{90} = \frac{13}{90}$  or 0.1444 (4sf) M1 A1
- (b)  $P(44.5^\circ \text{ to } 45.5^\circ) \therefore \frac{1}{90}$  M1 A1
- (c)  $P(< 10^\circ) = 10 \times \frac{1}{90} = \frac{1}{9}$  A1  
let  $X = \text{no. of times } < 10^\circ \therefore X \sim B(10, \frac{1}{9})$  M1  
 $P(X > 2) = 1 - P(X \leq 2)$  M1  
 $= 1 - [(\frac{8}{9})^{10} + 10(\frac{1}{9})(\frac{8}{9})^9 + \frac{10 \times 9}{2}(\frac{1}{9})^2(\frac{8}{9})^8]$  M1 A1  
 $= 1 - 0.9094 = 0.0906$  (3sf) A1 **(10)**
- 

6. (a) let  $X = \text{no. absent per lesson} \therefore X \sim Po(2.5)$   
 $P(X \geq 6) = 1 - P(X \leq 5) = 1 - 0.9580 = 0.0420$  M1 A1
- (b) assumes absences occur independently and at constant rate  
ill students may infect others and rate may vary at different times  
of year but assumptions fairly reasonable B3
- (c) registers for all classes B1
- (d) let  $Y = \text{no. absent per 30 lessons} \therefore Y \sim Po(75)$  M1  
use N approx.  $A \sim N(75, 75)$  M1  
 $P(Y \geq 96) \approx P(A > 95.5)$  M1  
 $= P(Z > \frac{95.5 - 75}{\sqrt{75}}) = P(Z > 2.367)$  A1  
 $= 1 - 0.9909 = 0.0091$  A1  
less than 5%  $\therefore$  significant, there is evidence of more absent per lesson A1 **(12)**
- 

7. (a)  $\int_0^3 k(t-3)^2 dt = 1$  M1  
 $k \int_0^3 t^2 - 6t + 9 dt = 1$  M1  
 $\therefore k[\frac{1}{3}t^3 - 3t^2 + 9t]_0^3 = 1$  A1  
 $\therefore k[(9 - 27 + 27) - (0)] = 1; 9k = 1; k = \frac{1}{9}$  M1 A1
- (b)
- (c)  $E(T) = \int_0^3 t \times \frac{1}{9}(t-3)^2 dt = \frac{1}{9} \int_0^3 t^3 - 6t^2 + 9t dt$  M1  
 $= \frac{1}{9} [\frac{1}{4}t^4 - 2t^3 + \frac{9}{2}t^2]_0^3$  A1  
 $= \frac{1}{9} [(\frac{81}{4} - 54 + \frac{81}{2}) - (0)] = \frac{3}{4}$  M1 A1  
 $\therefore \text{mean time} = \frac{3}{4} \times 10 = 7.5 \text{ s}$  A1
- (d)  $E(S) = \int_0^2 s \times \frac{1}{12}(8-s^3) ds = \frac{1}{12} \int_0^2 8s - s^4 ds$  M1  
 $= \frac{1}{12} [4s^2 + \frac{1}{5}s^5]_0^2$  A1  
 $= \frac{1}{12} [(16 - \frac{32}{5}) - (0)] = \frac{4}{5}$  M1 A1  
 $\therefore \text{new mean} = \frac{4}{5} \times 10 = 8 \text{ s} \therefore \text{increased by } 0.5 \text{ s}$  A1 **(18)**
- 

Total **(75)**
