Core Mathematics C3

Paper B

Time: 1 hour 30 minutes

INSTRUCTIONS TO CANDIDATES

- Answer **all** the questions.
- Give non-exact numerical answers correct to 3 significant figures, unless a different degree of accuracy is specified in the question or is clearly appropriate.
- You are permitted to use a graphic calculator in this paper.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.
- **You are reminded of the need for clear presentation in your answers.**

1. Find the set of values of x such that

$$|2x - 3| > |x + 2|. \quad [5]$$

2. Find, to 2 decimal places, the solutions of the equation

$$3 \cot^2 x - 4 \operatorname{cosec} x + \operatorname{cosec}^2 x = 0$$

in the interval $0 \leq x \leq 2\pi$. [6]

3. A curve has the equation $x = y^2 - 3 \ln 2y$.

- (i) Show that

$$\frac{dy}{dx} = \frac{y}{2y^2 - 3}. \quad [3]$$

- (ii) Find an equation for the tangent to the curve at the point where $y = \frac{1}{2}$.
Give your answer in the form $ax + by + c = 0$ where a , b and c are integers. [3]

4. (i) Use Simpson's rule with four intervals, each of width 0.25, to estimate the value of the integral

$$\int_0^1 x e^{2x} dx. \quad [3]$$

- (ii) Find the exact value of the integral

$$\int_{\frac{1}{2}}^1 e^{1-2x} dx. \quad [4]$$

5.

The diagram shows the curve with equation $y = \frac{1}{\sqrt{3x+1}}$.

The shaded region is bounded by the curve, the x -axis and the lines $x = 1$ and $x = 5$.

(i) Find the area of the shaded region. [4]

The shaded region is rotated through four right angles about the x -axis.

(ii) Find the volume of the solid formed, giving your answer in the form $k\pi \ln 2$. [4]

6.

The diagram shows a vertical cross-section through a vase.

The inside of the vase is in the shape of a right-circular cone with the angle between the sides in the cross-section being 60° . When the depth of water in the vase is h cm, the volume of water in the vase is V cm³.

(a) Show that $V = \frac{1}{9} \pi h^3$. [2]

The vase is initially empty and water is poured in at a constant rate of $120 \text{ cm}^3 \text{ s}^{-1}$.

(b) Find, to 2 decimal places, the rate at which h is increasing

(i) when $h = 6$, [5]

(ii) after water has been poured in for 8 seconds. [2]

Turn over

7. (i) Prove that, for $\cos x \neq 0$,

$$\sin 2x - \tan x \equiv \tan x \cos 2x. \quad [5]$$

- (ii) Hence, or otherwise, solve the equation

$$\sin 2x - \tan x = 2 \cos 2x,$$

for x in the interval $0 \leq x \leq 180^\circ$. [4]

8. A rock contains a radioactive substance which is decaying. The mass of the rock, m grams, at time t years after initial observation is given by

$$m = 400 + 80e^{-kt},$$

where k is a positive constant.

Given that the mass of the rock decreases by 0.2% in the first 10 years, find

- (i) the value of k , [5]

- (ii) the value of t when $m = 475$, [2]

- (iii) the rate at which the mass of the rock is decreasing when $t = 100$. [4]

9. $f(x) = 3 - e^{2x}$, $x \in \mathbb{R}$.

- (i) State the range of f . [1]

- (ii) Find the exact value of $ff(0)$. [2]

- (iii) Define the inverse function $f^{-1}(x)$ and state its domain. [3]

Given that α is the solution of the equation $f(x) = f^{-1}(x)$,

- (iv) explain why α satisfies the equation

$$x = f^{-1}(x), \quad [2]$$

- (v) use the iterative formula

$$x_{n+1} = f^{-1}(x_n)$$

with $x_0 = 0.5$ to find α correct to 3 significant figures. [3]
