MATHEMATICS C3

Pure Mathematics

P.M. THURSDAY, 12 January 2006

(1½ hours)

NEW SPECIFICATION

ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet;
- a calculator.

INSTRUCTIONS TO CANDIDATES

Answer **all** questions.

INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.

You are reminded of the necessity for good English and orderly presentation in your answers.

1. Use Simpson's Rule with five ordinates to find an approximate value for

$$\int_1^2 \sqrt{2+x^4} \, dx.$$

Show your working and give your answer correct to three decimal places. [4]

2. (a) Show, by counter-example, that the statement

$$\tan 2\theta \equiv 2 \tan \theta$$

is false. [2]

- (b) Find all values of θ in the range $0^\circ \leq \theta \leq 360^\circ$ satisfying

$$4 \cot^2 \theta = 11 - 4 \operatorname{cosec} \theta. \quad [6]$$

3. (a) The curve C is defined by

$$y^4 + x^3y = x^2 + 4x - 3.$$

Find the value of $\frac{dy}{dx}$ at the point $(2, 1)$ [4]

- (b) Given that $x = 2t^3$, $y = 3t^4$, find, in terms of t ,

(i) $\frac{dy}{dx}$,

(ii) $\frac{d^2y}{dx^2}$. [4]

4. (a) Show that $2 \tan^{-1} x - 6 \ln(1+x^2) - 4x^2$ has a stationary value when x satisfies

$$4x^3 + 10x - 1 = 0. \quad [5]$$

- (b) Show that the equation

$$4x^3 + 10x - 1 = 0$$

has a root α between 0 and 1.

The recurrence relation

$$x_{n+1} = \frac{1 - 4x_n^3}{10}$$

with $x_0 = 0.1$ may be used to find α . Calculate and record the values of x_1, x_2, x_3 . Write down the value of x_3 correct to six decimal places and show that it is the value of α correct to six decimal places. [7]

5. Differentiate each of the following with respect to x , simplifying your answer where possible.

(a) $e^{3x} \cos x$ [3]

(b) $\frac{2x^2 + 1}{3x^2 + 2}$ [3]

(c) $\tan(5x^2 + 3)$ [2]

(d) $\ln(2x)$ [2]

(e) $\sin^{-1}(3x)$. [2]

6. (a) Solve the inequality $|3x - 8| \leq 5$. [3]

(b) Given that $f(x) = |x|$, sketch the graph of $y = f(x)$. On the same diagram, sketch the graph of $y = f(x + 2) + 1$, indicating its position. [4]

7. (a) Find

(i) $\int \left(\frac{4}{7x+2} + \frac{5}{(3x+1)^3} \right) dx$, [4]

(ii) $\int \cos 2x dx$. [2]

(b) Evaluate $\int_0^4 e^{\frac{x}{2}} dx$. [4]

8. The function f is defined for $x \geq 0$ by $f(x) = 3x^2 + 4$.

(a) Find an expression for f^{-1} , stating the range and domain of f^{-1} . [6]

(b) Sketch the graphs of f and f^{-1} using the same axes. [3]

9. The function f has domain $(-\infty, \infty)$ and is defined by $f(x) = e^x$.

The function g has domain $(2, \infty)$ and is defined by $g(x) = \ln(x^2 - 4)$.

(a) State the domain of fg . [1]

(b) Solve the equation $fg(x) = 5$. [4]
