Units 5 - 9: Section A

1 (a)(i)

correct arrows: A ✓

(a)(ii)
$$e^{-1} + {}_{7}^{A}X \rightarrow {}_{7-1}^{A}Y + v_{e} \checkmark$$
 (4)

(b)(i)
$$((4.18 - 1.33) \times 10^{-13}) = 2.85 \times 10^{-13} \text{ (J)} \checkmark$$

(b)(ii)
$$1.33 \times 10^{-13}$$
 (J)
 0.30×10^{-13} (J) for 3 correct values \checkmark
 1.63×10^{-13} (J)

(b)(iii) (use of
$$\Delta E = hf$$
 gives) $f\left(=\frac{1.63 \times 10^{-13}}{6.63 \times 10^{-34}}\right) = 2.46 \times 10^{20} \text{ Hz } \checkmark$ (allow C.E. from (b)(ii) if largest value taken)

(c)(i) (\checkmark for each precaution with reason to $_{max}2$)

handle with (long) (30 cm) tweezers because the radiation intensity decreases with distance

store in a lead box (immediately) when not in use to avoid unnecessary exposure to radiation

[or any sensible precaution with reason]

(b)(ii) γ rays are more penetrating and are therefore more hazardous (to the internal organs of the body)

$$\beta^-$$
 particles are more hazardous because they are more ionising \checkmark
(\checkmark for any argued case for either radiation)
(10)

Unit 9: PHA9/W: Section B

2

(a)(i) suitable scales ✓
correctly plotted points ✓
straight line ✓

(a)(ii) (use of
$$X_C = \frac{1}{2\pi fC}$$
 gives) $V = \frac{I}{2\pi fC}$ \checkmark

$$C = \frac{I}{f} \times \frac{1}{2\pi V} = \text{gradient} \times \frac{1}{2\pi V} \checkmark$$
[gradient $\left(= \frac{I}{f} \right) = 20\pi C$]
$$C = \frac{18.2 \times 10^{-3}}{1600} \times \frac{1}{2\pi 10} = 0.18 \,\mu\text{F} \checkmark$$
max(5)

(b)(i) at high f, reactance, X_C , has a low value (compared to R) \checkmark most of voltage dropped across R making V_{out} small \checkmark

(b)(ii) when
$$X_C = R$$
, $f = \frac{1}{2\pi RC}$

$$f = \frac{1}{2\pi 2 \times 10^3 \times 0.18 \times 10^{-6}} = 442 \text{ Hz } \checkmark$$
(allow C.E. for value of C from (a)(ii))

(b)(iii) for
$$f << 440$$
 Hz, $V_{\text{out}} \approx V_{\text{in}} \checkmark$

$$\frac{V_{\text{out}}}{V_{\text{in}}} \rightarrow 1 \checkmark$$

$$\left[\text{or } \frac{V_{\text{out}}}{V_{\text{in}}} = \frac{1}{\sqrt{1 + f^2 / f_0^2}} \right]$$

$$(10)$$

3

(a)(i) potential at P is very low $\approx 0.2 \text{ V (or } 0 \text{ V)}$

(b) potential at P goes high (12 V) \checkmark [or > 0.7 V]

TR conducts \checkmark current through relays and alarm switches on \checkmark $^{\text{max}}(2)$

(d) protects the transistor
$$\checkmark$$
 (1) (8)

4

(a)
$$V_{-} = 12 \times \frac{30}{46} \checkmark$$

= 7.8 V \checkmark (2)

- (b)(i) between V_{out} and 0 V \checkmark (or from +12 V to V_{out}) correct direction and resistor \checkmark
- (b)(ii) (since V_{in} < switching voltage) $V_{out} = -12 \text{ V} (12 \text{ V across LED}) \checkmark$ (or alternative)

(b)(iii) voltage across R =
$$(12 - 2) = 10$$
 (V) \checkmark
 $10 = 25 \times 10^{-3} \times R$ gives $R = 400 \Omega \checkmark$
(or alternatively $22 = 25 \times 10^{-3}$ to give $R = 880 \Omega$)

(c) to switch LED voltage at B = 7.8 (V)
$$\checkmark$$

$$R_{LDR} \text{ given by } 7.8 = \frac{12 \times 47}{(47 + R)} \text{ or } \checkmark$$

$$R_{LDR} = 25.(3) \text{ k}\Omega \checkmark$$

$$\text{light level = 30 lux } \checkmark$$

$$\frac{R_{LDR} = 25.(3) \text{ k}\Omega}{(10)}$$
