CAMBRIDGE INTERNATIONAL EXAMINATIONS Cambridge International Advanced Subsidiary and Advanced Level

MARK SCHEME for the October/November 2014 series

9702 PHYSICS

9702/52

Paper 5 (Planning, Analysis and Evaluation), maximum raw mark 30

MMM. Hiremepapers.com

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Pa	age 2	Mark Scheme	Syllabus	Paper	
		Cambridge International AS/A Level – October/November 2014	9702	52	
1	Plar	ning (15 marks)			
	Defi	ning the problem (3 marks)			
	Ρ	(cos) θ is the independent variable, or vary (cos) θ .		[1]	
	Ρ	P is the dependent variable, or measure P.		[1]	
		Keep the speed of the air <u>constant</u> . Allow keep power to the fan/hairdryer <u>constant</u> .		[1]	
	Methods of data collection (5 marks)				
		Labelled diagram showing method to produce air flow in line with turbine producing "wind" must be labelled.	e. Method o	of [1]	
		Circuit connecting turbine to lamp with ammeter and voltmeter connecte No additional power supplies in the lamp circuit.	ed correctly.	[1]	
		$P = IV$. Do not allow I^2R or V^2/R unless it is clear that R is determined fr Allow wattmeter or joule meter and stopwatch.	om V/I.	[1]	
	М	Measure angle with protractor or use rule to measure appropriate distan	ices.	[1]	
	М	Ensure that there are no other draughts or airflows.		[1]	
	Met	nod of analysis (2 marks)			
	А	Plot a graph of <i>P</i> against $\cos \theta$.		[1]	
	А	k = gradient.		[1]	
	Safety considerations (1 mark)				
	S	Precaution linked to avoiding air flow entering eyes or avoid moving blac	des.	[1]	
	Add	itional detail (4 marks)			
	1 2 3 4 5 6 7 8	Relevant points might include Use of large wind speed to gain measurable readings. Use of low wattage/low resistance lamp or turbine with low friction. Additional detail on measuring (cos) θ – correct angle must be determine Wait until airflow/turbine/meter readings constant. Avoid turbulence or reflection of air flow. Ensure distance from fan to turbine is constant. Relationship is valid if the graph is a <u>straight line passing through the ori</u> Method to check that wind speed is constant.		[4]

2 Analysis, conclusions and evaluation (15 marks)

	Mark	Expected Answer		Additional Guidance		
(a)	A1 gradient = $\frac{1}{4\pi^2 L}$					
(b)	T1 T2	4.0 or 4.00	22.2 or 22.20	T1 (first column) and T2 (second column) must be table values. Allow a mixture of significant figures.		
		3.3 or 3.33	18.0 or 17.96			
		2.9 or 2.86	15.1 or 15.13			
		2.3 or 2.27	11.4 or 11.45			
		1.5 or 1.52	6.7 or 6.72			
		1.1 or 1.14	4.2 or 4.23			
	U1 From \pm 0.4 (or \pm 0.5) to \pm 0.1 (or \pm 0.2)		\pm 0.5) to \pm 0.1	Allow more than one significant figure.		
(c) (i)	(i) G1 Six points plotted correctly		d correctly	Must be within half a small square. Penalise "blobs". Ecf allowed from table.		
	U2	Error bars in 1/C plotted correctly		All error bars to be plotted. Must be accurate to less than half a small square.		
(c) (ii)	G2	Line of best fit		If points are plotted correctly then lower end of line should pass between (1.65, 8.0) and (1.75, 8.0) and upper end of line should pass between (3.95, 22) and (4.05, 22). Allow ecf from points plotted incorrectly – examiner judgement.		
	G3	Worst acceptable straight line. Steepest or shallowest possible line that passes through <u>all</u> the error bars.		Line should be clearly labelled or dashed. Examiner judgement on worst acceptable line. Lines must cross. Mark scored only in all error bars are plotted.		
(c) (iii)	C1	Gradient of best fit line		The triangle used should be at least half the length of the drawn line. Check the read-offs. Work to half a small square. Do not penalise POT. (Should be about 6.)		
	U3	Uncertainty in gradient correctly determined		Method of determining absolute uncertainty: difference in worst gradient and gradient.		
(d)	(d) C2 $L = \frac{1}{4\pi^2 \times \text{gradient}}$		ent	Allow ecf from (c)(iii). (Should be about 4×10^{-3} .)		

Page 4	Mark Scheme			Syllabus	Paper
	Cambridge International AS/A Level – October/November 2014			9702	52
	C3	$F^{-1}Hz^{-2}$ or s^2F^{-1}	Allow H or $kgm^2A^{-2} s^{-2}$ Conventional notation r		Ωs.
	U4	Absolute uncertainty in L.			
(e) (i)	C4	<i>f</i> in the range 760 to 800 <u>and</u> given to 2 or 3 s.f. $f = \frac{1}{2\pi\sqrt{LC}} = \sqrt{\frac{\text{gradient}}{C}}$		t	
(ii)	U5	Percentage uncertainty in <i>f</i> . Must be greater than 5%.	¹ / ₂ (Percentage uncertainty in <i>L</i> + percentage uncertainty in <i>C</i>)		

[Total: 15]

Uncertainties in Question 2

(c) (iii) Gradient [U3]

Uncertainty = gradient of line of best fit - gradient of worst acceptable line

Uncertainty = ½(steepest worst line gradient – shallowest worst line gradient)

(d) [U4]

absolute uncertainty in
$$L = \left(\frac{\Delta \text{gradient}}{\text{gradient}} \times L\right)$$

$$\max L = \frac{1}{4\pi^2 \times \min \text{ gradient}}$$

$$\min L = \frac{1}{4\pi^2 \times \max \text{ gradient}}$$

(e) (ii) [U5]

% uncertainty =
$$\frac{1}{2} \left(\frac{\Delta L}{L} \times 100 + 10 \right) = \frac{1}{2} \left(\frac{\Delta \text{gradient}}{\text{gradient}} \times 100 + 10 \right)$$

$$\max f = \frac{1}{2\pi \sqrt{L_{\min}C_{\min}}} = \sqrt{\frac{\max \text{ gradient}}{\min C}}$$

$$\min f = \frac{1}{2\pi\sqrt{L_{\max}C_{\max}}} = \sqrt{\frac{\min \text{ gradient}}{\max C}}$$
