

Mark Scheme Summer 2007

GCE

GCE Physics (6733/01)

6733 Unit Test PHY3 (Topics)

Topic A - Astrophysics

- (a) Intensity and Luminosity
- Luminosity = power [or energy / time, accept “per second”] ✓
- Intensity = power (or energy / time) [e.c.f. from first mark] per unit area [accept per square metre] ✓
- Luminosity: measured at star OR Intensity: measured at Earth / depends on distance (from star) / observed OR W with $W \text{ m}^{-2}$ OR $I = L \div 4 \pi D^2$ ✓ 3
- (b) Wavelength of Sun
- (i) Use of Wien’s law [accept any attempted use] ✓
- $5.0 \times 10^{-7} \text{ m}$ ✓ 2
- (ii) Surface area of Sun
- Use of $4 \pi r^2$ ✓
- $6.1 \times 10^{18} \text{ (m}^2\text{)}$ ✓ 2
- (iii) Luminosity of Sun
- $L = \sigma A T^4$ [or $L = \sigma T^4 4 \pi r^2$] ✓
- Correct substitution [e.c.f.] ✓
- $3.9 \times 10^{26} \text{ W}$ [accept 3.8 or $3.84 \times 10^{26} \text{ W}$ from $6 \times 10^{18} \text{ m}^2$] ✓ 3
- (c) Main sequence mass requirement
- Quality of written communication ✓
- (Main sequence requires) hydrogen fusion / burning ✓
- Mass linked to gravitational forces / field [/energy] ✓
- High forces [or temperature, pressure] required for fusion / burning / m.s. ✓ 4
- (d) Hertzsprung-Russell diagram
- (i) Axes change in (fixed) multiples [accept exponential changes] ✓
- x-axis multiple: $\times \frac{1}{2}$ OR $\times 2$ ✓ 2
- (ii) L on diagonal falling line in lower right quadrant ✓

	W indicated mostly in lower left quadrant	✓	
	R indicated mostly in upper right quadrant [not on main sequence]	✓	
	S in line with 10^0 [± 2 mm to centre of S, to left of 5000 K. on m.s.]	✓	4
(e)	<u>Parallax analogy</u>		
(i)	$5 \tan 84^0$ [beware $5 / \cos 84^0 = 47.8$ m]	✓	
	47.6 m	✓	2
(ii)	$2 \text{ AU} / \text{Earth orbital radius} \times 2 / \text{Earth orbital diameter} / \text{distance between Earth at a six month interval} / 3 \times 10^{11} \text{ m}$	✓	1
(iii)	Inaccurate readings / difficult to measure AND small angles / movement relative to background (stars)	✓	1
(f)	<u>Black hole radius</u>		
(i)	Correct substitution / 8.93×10^{-3} (m)	✓	
	R doubled OR 2 cm halved	✓	
	0.018 m OR 1.8 (cm) [accept 2 cm / 0.02 m from previously rounding]	✓	3
(ii)	Supernova	✓	1
	<u>Mass of black hole</u>		
(iii)	$2.5 M_{\odot}$	✓	1
(iv)	Substitution [allow $R = 26.8$]	✓	
	1.8×10^{31} (kg)	✓	
	$9 (M_{\odot})$ [no e.c.f.]	✓	3
		TOTAL	32

Topic B - Solid Materials

(a) Elastic and Plastic behaviour

Plastic = permanent AND elastic = reversible [may be implied anywhere] ✓

Elastic: bonds stretch but not broken / atoms move apart but then return ✓

Plastic: bonds broken (when stressed) / atoms do not return to original position (after stress) ✓

3

(b) Ultimate Tensile Strength

(i) $(3.6 - 3.7) \times 10^8 \text{ N m}^{-2} / \text{Pa}$ ✓

Energy density estimate

(ii) Energy density = area [may be implied by working] ✓

Attempt at area [ignore 10^8 and 10^{-3}] (rectangle (and triangle) or counting squares) ✓

Range: $600 \text{ kJ m}^{-3} - 700 \text{ kJ m}^{-3}$ [accept N m^{-2}] ✓

3

Young modulus calculation

(iii) Attempt at gradient / stress ÷ strain [ignore 10^n] ✓

Valid pair of readings taken from graph [10^8 and 10^{-3} required] ✓

$8.0 \text{ to } 9.0 \times 10^{11} \text{ N m}^{-2} / \text{Pa}$ ✓

3

Tough or brittle explanation

(iv) Tough ✓

Any reference to plastic behaviour ✓

(Large area under) non-linear part of graph referred to ✓

3

(c) Definitions

(i) Stress = force ÷ area AND strain = extension ÷ original [initial] length ✓

(ii) $E = \text{stress} \div \text{strain}$ [accept symbols here] ✓

2

$$E = \frac{F/A}{\Delta l/l}$$

<u>Radius “show that” calculation</u>			
(iii)	Correct substitution in $E = \frac{FL}{A\Delta l} / A = 2.7 \times 10^{-7} \text{ (m}^2\text{)}$	✓	
	$A = \pi r^2$	✓	
	$2.9 \times 10^{-4} \text{ m} / 0.29 \text{ (mm)}$	✓	3
<u>Golf ball rubber</u>			
(d)	Quality of written communication	✓	
(i)	(Can absorb energy) elastically / elastic behaviour / not plastic	✓	
	Can release energy with high efficiency / greater transfer of energy (from club to ball) / small hysteresis loop	✓	
	Can withstand (very) large forces [or stress] / durable / elastomer	✓	4
<u>Hysteresis graph for rubber</u>			
(ii)	Correct shape: steep-flatter-steep, and reverse	✓	
	Labels [one labelled curve scores 1/2]	✓	2
<u>Area difference explanation</u>			
(iii)	Reference to area / difference in two areas	✓	
	Loop area linked to gain / internal energy / heat by rubber	✓	2
(e)	<u>Steel tension members on boat</u>		
(i)	$T_f \cos 30^\circ / 4 \cos 30^\circ / T_r \cos 45^\circ / 2.8 \cos 45^\circ$	✓	
	$5.4 \times 10^3 \text{ N}$	✓	2
<u>Moments calculation</u>			
(ii)	Attempt at moments / moment = Force x (perpendicular) distance from P	✓	
	$\sin 45^\circ / \sin 30^\circ$ multipliers used anywhere [accept $\cos 45^\circ$ AND $\cos 60^\circ$]	✓	
	$\cos 60^\circ$	✓	3
	<u>Both</u> shown to be 10 (kN m) OR subtract moments to zero		
		TOTAL	32

Topic C - Nuclear and Particle Physics

(a) Strong and weak interaction differences

Strong affects quarks (only) AND Weak affects any particle ✓

Both exchange particles: gluon, either W or Z ✓

Any two from:

W^+ , W^- and Z

strength ($S \approx 10^5 W$ for touching protons) [accept $S \gg W$]

range ($S \approx 10^{-15}$ m, $W \approx 10^{-18}$ m) [accept $S > W$]

mass ($S = 0$, $W \approx 89u$) [accept $W > S$]

Only W can change (quark) flavour / W involve in β -decay

Any 2

✓✓

4

(b) Alpha particle radius

(i) $A = 4$ ✓

Use of $r = r_0 A^{1/3}$ [accept substitution if correctly written] ✓

1.9×10^{-15} (m) [beware 1.6×10^{-15} m] ✓

3

(ii) Alpha particle density

use of $\rho = m \div V$ ✓

$m = 4 \times 1.66 \times 10^{-27}$ (kg) / 6.64×10^{-27} (kg) [accept u as 1.7×10^{-27}] ✓

$4/3 \pi (1.9 \times 10^{-15} \text{ m})^3 / 2.9 \times 10^{-44} \text{ m}^3$ [e.c.f. only to 1.6×10^{-15} m] ✓

$2.3 \times 10^{17} \text{ kg m}^{-3}$ (allow $2 \times 10^{17} \text{ kg m}^{-3}$ but not $1.98 \times 10^{17} \text{ kg m}^{-3}$ [sf]) ✓

4

(iii) Alpha particle spectrum

Single line / narrow peak only ✓

1

(c) Carbon - 14 formation

(i) N, B, C and ν_e in correct equation [accept e or β] ✓

Correct nucleon numbers: 14, 0, 14 ✓

Correct proton numbers 7, -1, 6 [all A and Z interchanged scores 1/2] ✓

3

(ii) Proton turns into a neutron / up to down / uud to udd [ignore leptons] ✓

1

(iii) <u>Initial activity calculation</u>			
(almost) two half lives / 11460 years (is almost 12 000 years) / 2.09	✓		
4800 / 5000 (Bq) [or $2^{2.09}$ or exponential equation route = 5124 Bq]	✓		2
(d) <u>Pair production explanation</u>			
Quality of written communication	✓		
Photon / gamma (ray) initially [not photons, accept Z^0]	✓		
Converted into particle and antiparticle / matter and antimatter	✓		
Two examples: e^+ , e^- / p , \bar{p} / $\bar{\nu}$, ν / q , \bar{q} / etc. [not “anti-electron”]	✓		4
(e) <u>Hadron definition</u>			
(i) (Particle) composed of quarks	✓		1
(ii) <u>Quark flavours</u>			
Charm, strange, top [any order]			
All three in correct position:		c... t... s...	
	✓		
	✓		2
(iii) <u>Baryon charge permutations</u>			
Baryon = qqq [may be implied]	✓		
+2, +1, 0, -1 [accept 2, 1, 0, -1]	✓		
Addition shown four times ($+ \frac{2}{3} + \frac{2}{3} + \frac{2}{3} = +2$, etc.)	✓		3
[Only three additions scores max ✓✓x]			
-2	✓		1
(iv) <u>Pion compositions</u>			
$\pi^+ = u\bar{d}$	✓		
$\pi^- = d\bar{u}$	✓		
$\pi^0 = u\bar{u}$ and $d\bar{d}$	✓		3
		TOTAL	32

Topic D - Medical Physics

(a) Ultrasound and X-ray imaging

Labelled diagram with transducer (source and detector) touching patient ✓

Labelled diagram with X-ray source : (patient) : film ✓

Any two pairs from:

Ultrasound

X-rays

AND

(high frequency) longitudinal sound / mechanical waves

(high energy) electromagnetic / transverse waves / photons

Coupling medium needed

(tube) not in contact with patient

Reflection (at interface)

Attenuation / absorption

No ionisation / radiation risk

Ionisation / radiation dose

Limited resolution / detail

Better resolution

Specific acoustic impedance

Proton number dependence

Soft tissue imaging / Doppler

Bones usually imaged

Any 2

✓✓

Max 4

(b) Molybdenum

(i) ${}_{42}^{99}\text{Mo} \rightarrow {}_{43}^{99\text{m}}\text{Tc} + {}_{-1}^0\text{B}$ [accept e or β with all six values, ignore neutrinos] ✓ **1**

(ii) Neutron irradiation / bombardment OR (uranium) fission ✓ **1**

Gamma radiation advantages

(iii) (Half-life of 6 h) - neither too long (damage to patient) not too short (sufficient for study to take place) ✓

Lowest ionisation / no α or β , so less damage / safer (to cells / patient) ✓ **3**

Can be detected outside body / by gamma camera ✓

(c) X-rays in diagnosis and therapy

(i) Diagnosis: imaging / examining patient AND therapy: treatment ✓ **1**

(ii) Diagnosis: (60 - 150) keV [values not required, allow 1 - 999] ✓

Therapy: (4 - 25) MeV [values not required, allow 1 - 999] ✓ **2**

(iii) Diagnosis: depends on Z; Therapy: no Z dependence ✓ **1**

(iv) Quality of written communication ✓

Rotating or multiple beams / alignment devices clearly shown in ✓

diagram	✓	
Tumour always targeted [may be in diagram]	✓	4
Surrounding tissue only sometimes receives radiation		
(d) <u>Ultrasound medium properties</u>		
(i) Use of $Z = \rho \times c$	✓	
$A = 1570 \text{ (m s}^{-1}\text{)}$	✓	
$B = 1026 / 1030 \text{ (kg m}^{-3}\text{)}$	✓	3
<u>Reflection coefficient calculation</u>		
(ii) $(1.70 - 1.38)^2 \div (1.70 + 1.38)^2$	✓	
0.011 / 1.08% / 1.1%	✓	
98.9% / 100% - their value (ecf) / statement 1% reflected, 99% transmitted	✓	3
(e) <u>Half-life definition</u>		
(i) Time taken for activity (of radionuclide) to half due to excretion (from body or organ) OR time for body to excrete half of sample [accept "get rid of..."]	✓	1
(ii) <u>Effective half-life calculation</u>		
$1/t_e = 1/13 + 1/11$	✓	
5.96 (h) / 6.0 h [accept 5.95h, but not 5.8h nor 5.9h]	✓	2
(iii) <u>Half-life plot</u>		
Smooth, falling, concave curve, not touching x-axis, to 12 h	✓	
Starting at (0,1000)	✓	
Plots or line through (0,1000), (6,500) AND (12,250)	✓	3
<u>Radioisotope Y effective half-life</u>		
(iv) 4 h	✓	1
(v) Curve through (0,2000), (4,1000) AND (8,500)	✓	1
(vi) 12 h	✓	1
	TOTAL	32
