Final Mark Scheme

---

1350  
June 2017

---

Version/Stage: v1.0

---

---

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

### Key to mark scheme abbreviations

|              |  |
|--------------|--|
| M            | mark is for method   |
| m or dM      | mark is dependent on one or more M marks and is for method         |
| A            | mark is dependent on M or m marks and is for accuracy              |
| B            | mark is independent of M or m marks and is for method and accuracy |
| E            | mark is for explanation  |
| ✓ or ft or F | follow through from previous incorrect result                      |
| CAO          | correct answer only  |
| CSO          | correct solution only  |
| AWFW         | anything which falls within  |
| AWRT         | anything which rounds to   |
| ACF          | any correct form   |
| AG           | answer given   |
| SC           | special case   |
| OE           | or equivalent  |
| A2,1         | 2 or 1 (or 0) accuracy marks                                       |
| -x EE        | deduct x marks for each error                                      |
| NMS          | no method shown  |
| PI           | possibly implied   |
| SCA          | substantially correct approach                                     |
| c            | candidate  |
| sf           | significant figure(s)  |
| dp           | decimal place(s)   |

### No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

**Otherwise we require evidence of a correct method for any marks to be awarded.**

| Q    | Answer   | Mark | Comments  |
|------|--|------|---|
| 1(a) | $\frac{10}{24} (\times 100)$   | M1   | OE  |
|      | 41 or 42 or 41.6(...) or 41.7  | A1   |   |
|      | <b>Additional Guidance</b>   |      |   |
|      | Sight of 0.41(6...)  |      | M1  |
|      | $\frac{5}{12}$ seen  |      | M1  |
|      | Beware 42.6 comes from the average of the ten scores over 33   |      |   |
| 1(b) | <b>Alternative method 1</b>  |      |   |
|      | Median or mean = 30  | B1   |   |
|      | In general the students in this class/they performed better than the national average  | E1ft | OE<br>correct comment for their median or mean    |
|      | <b>Alternative method 2</b>  |      |   |
|      | 15 out of 24/more than half the students scored more than the national average<br>or<br>9 out of 24/ less than half the students scored below the national average | B1   | OE eg 62.5% scored more than the national average |
|      | In general the students in this class/they performed better than the national average  | E1ft | OE<br>correct comment for their proportion/values |
|      | <b>Additional Guidance</b>   |      |   |
|      | Do not accept 'The median was higher' for the E mark<br>However 'they got higher marks than the national average/ on average they got higher marks' would score E1 |      |   |
|      | In general students were above the national average  |      |   |

| Q | Answer | Mark | Comments |
|---|--------|------|----------|
|---|--------|------|----------|

|   |     |    |  |
|---|-----|----|--|
| 2 | £83 | B1 |  |
|---|-----|----|--|

| Q | Answer | Mark | Comments |
|---|--------|------|----------|
|---|--------|------|----------|

|   |  |    |   |   |
|---|--|----|---|---|
| 3 | <b>Alternative method 1</b>  |    |   |   |
|   | <b>Package</b><br>744 × 3 × 0.9 or (£)2008.8(0)  | M1 | OE  | Award M2 for<br>744 × 3 × 0.9 × 1.03 in any order<br><br>Award M1 for any 3 of these values multiplied in any order |
|   | their (£)2008.(..) × 1.03 or (£)2069.(..)  | M1 | OE  |   |
|   | <b>Independent</b><br>Hotel 480 ÷ 1.33 × 3<br>or 360.9(0) × 3<br>or (£)1082.(..)   | M1 | or 480 ÷ 1.33 + 312 or (£)672.90  |   |
|   | Total cost<br>Their (£)1082.(..) + 312 × 3<br>or (£)2018.(..)  | M1 | their (£)672.90 × 3   |   |
|   | (£)2069.(...) <b>and</b> (£)2018.(...) <b>and</b> independent is cheaper<br>or<br>independent is 50.35 cheaper/over £50 cheaper  | A2 | A1 for two values with one correct and correct ft conclusion<br>or<br>A1 for both values correct but incorrect or no conclusion |   |
|   | <b>Additional Guidance</b>   |    |   |   |
|   | <p>If there is evidence of multiplying by 3 people at some point then use alt 1 (in pounds) or alt 3 (in euros)</p> <p>If there is no evidence of multiplying by 3 then use alt 2 (in pounds) or alt 4 (in euros)</p> <p>Do not swap between alts for a response</p> <p>Example (using alt 1)</p> <p>744 × 3 × 0.9 × 1.03 = 2069.06      M2</p> <p>480 ÷ 1.33 = 360.90</p> <p>360.90 + 312 = 672.90      M1 (in comment box)</p> <p>independent is cheaper      A1 (one correct value – 2069- and correct ft conclusion)</p> |    |   |   |

|  |  |
|--|--|
|  | <p>So although both values are correct on different alts they should have multiplied 672.9 by 3 or divided 2069 by 3 to be consistent so treat as incorrect method<br/>(marking on alt 2 would give the same total of 4 marks –M1M0M1M1A1)</p>   |
|  | <p>Accept alternative ways of subtracting 10% and/or adding 3%</p>   |
|  | <p>Multiplying by an incorrect percentage can still score one of the first 2 method marks<br/>Examples<br/> <math>744 \times 3 \times 0.1 \times 1.03</math> or 229.(...) scores M0M1 (3 correct values multiplied)<br/> <math>744 \times 3 \times 1.1 \times 1.03</math> or 2528.(...) scores M0M1 (3 correct values multiplied)<br/> <math>744 \times 3 \times 0.9 \times 0.97</math> or 1948.(..) scores M0M1 (3 correct values multiplied)<br/> <math>744 \times 3 \times 0.1 \times 0.97</math> scores M0M0<br/>                 These are only examples.</p> |
|  | <p>They <b>must</b> compare using consistent units<br/>example<br/> <math>\pounds 2069</math> and <math>\pounds 2685</math> and packages 4 u are cheaper does <b>not</b> gain the A1 for one value correct and correct ft conclusion. This would gain maximum M2 for either 2069 or 2685</p>   |

|          |   |    |    |   |
|----------|---|----|----|---|
| <b>3</b> | <b>Alternative method 2</b>   |    |    |   |
|          | <b>Package per person</b><br>$744 \times 0.9$ or $(\pounds)669.(..)$  | M1 | OE | Award M2 for<br>$744 \times 0.9 \times 1.03$<br>in any order<br>Award M1 for any 2 of these values multiplied in any order      |
|          | their $(\pounds)669.(..) \times 1.03$ or $(\pounds)689.(..)$  | M1 | OE |   |
|          | <b>Independent per person</b><br>Hotel $480 \div 1.33$ or $(\pounds)360.(9..)$  | M1 |    |   |
|          | Their $(\pounds)360.(9..) + 312$ or $672.(..)$  | M1 |    |   |
|          | $(\pounds)689.(...)$ <b>and</b> $(\pounds)672.(...)$ <b>and</b> independent is cheaper per person<br>or<br>independent is $(\pounds)17$ cheaper per person<br>or<br>total cost is $(\pounds)51$ cheaper for independent | A2 |    | A1 for two values with one correct and correct ft conclusion<br>or<br>A1 for both values correct but incorrect or no conclusion |
|          | <b>Additional Guidance</b>  |    |    |   |

|  |   |  |
|--|---|--|
|  | Accept alternative ways of subtracting 10% and/or adding 3%   |  |
|  | <p>Multiplying by an incorrect percentage can still score one of the first 2 method marks</p> <p>Examples</p> <p><math>744 \times 0.1 \times 1.03</math> or <math>76(\dots)</math> scores M0M1 (2 correct values multiplied)</p> <p><math>744 \times 1.1 \times 1.03</math> or <math>842(\dots)</math> scores M0M1 (2 correct values multiplied)</p> <p><math>744 \times 0.9 \times 0.97</math> or <math>649(\dots)</math> scores M0M1 (2 correct values multiplied)</p> <p><math>744 \times 0.1 \times 0.97</math> scores M0M0</p> <p>These are only examples.</p> |  |
|  | They must compare using consistent units  |  |

|  |  |  |
|--|--|--|

| Q | Answer | Mark | Comments |
|---|--------|------|----------|
|---|--------|------|----------|

|                            |   |      |  |
|----------------------------|---|------|--|
| 4                          | <p>Makes an assumption about number of litres per person per day in the range 1 litre to 10 litres (or ml equivalents)</p> <p><b>and</b></p> <p>assumes a number of days in a month in the range 28 to 31</p> <p><b>and</b></p> <p>Makes an assumption about number of people in a small town in the range 1000 to 100000</p> | B3   | <p>Must state units</p> <p>eg Minimum for B3</p> <p>(Assume) 5 litres, 28 days, 15000 people</p> <p>or</p> <p>B2 for 2 correct assumptions (one missing or not in range)</p> <p>eg (Assume) 3 litres, 30 days, 300000 people</p> <p>or</p> <p>B2 for all 3 values within range but not stated as assumptions</p> <p>eg <math>4 \times 30 \times 10000</math> seen gets B2 M1</p> <p>or</p> <p>B1 Any one correct assumption stated</p> <p>eg drink about 3 litres per day</p> <p>or</p> <p>Multiplication of 3 values with 2 in range and no units</p> <p>eg</p> <p><math>12 \times 31 \times 20000</math></p> |
|                            | Multiplies their 3 values together  | M1   | This may be done in two steps  |
|                            | Accurate answer to their calculation  | A1ft | ft their 3 values<br>May be rounded  |
| <b>Additional Guidance</b> |   |      |  |
|                            | Ignore any calculations to get the number of litres per day eg 4 x 300ml glass is 1.5 litres scores B1 for 1.5 litres (even though arithmetic is wrong)   |      |  |
|                            | The amount of liquid they multiply by must be per person not per household  |      |  |
|                            | 28 to 31 days can come from various calculations eg 7 days x 4 weeks, $365(.25) \div 12$ Again just award the B1 for a number of days within the range  |      |  |

|  |   |  |
|--|---|--|
|  | they could use households to estimate population eg small town 2000 houses<br>$\times 4$ people = 8000 population   |  |
|  | If working in ml they can still gain the method mark but they must convert to litres for the accuracy mark  |  |
|  | The three values may be multiplied in 2 steps<br>eg litres per day $\times$ days in month at one point in their working,<br>then this answer $\times$ number of people                        |  |
|  | If they just state a number of litres per month eg 65 litres per month they do not score the marks for assumptions but can score M1 and A1 for multiplying this correctly by their population |  |
|  | Allow rounding at any point<br>eg<br>uses 7 litres and 31 days in a month, $7 \times 31 = 217$ and rounds to 200 or 220   |  |
|  | Final answer must be an integer   |  |

| Q | Answer | Mark | Comments |
|---|--------|------|----------|
|---|--------|------|----------|

|      |   |    |   |
|------|---|----|---|
| 5(a) | Collect prices from estate agents/websites for house prices/<br>recent house sales/newspapers<br><b>and</b><br>across different areas of London | E2 | E1 Partial explanation (only one of the comments) |
|      | <b>Additional Guidance</b>  |    |   |
|      | For different area allow different suburbs/estates/streets  |    |   |

|      |  |    |  |
|------|--|----|--|
| 5(b) | (No,) London prices may not be representative of the whole country<br>or<br>London prices are likely to be higher/different than some other parts of the country | B1 |  |

|   | <b>Additional Guidance</b>   |    |  |
|   | Allow truncated values for all method marks but answer must be 34p   |    |  |
|   | 13.60 scores M4<br>256.75 scores M4<br>15.29 <b>or</b> 15.96 scores M2<br>15.29 <b>and</b> 15.96 scores M3   |    |  |
| Working out tax and national insurance for their current wage of 6.70 gains no marks. (the net pay is given) Please ignore any work using this 6.70 |  |    |  |

| Q    | Answer   | Mark | Comments  |
|------|--|------|---|
| 9(a) | 15.8(4)  | B2   | B1 for $\sum fx = 792$ seen<br>SC1 15.59 or 15.6 or 16.09 or 16.1 (using lower or upper class boundaries) |
|      | <b>Additional Guidance</b>   |      |   |
|      | If 15.84 is seen then ignore any attempt to change to minutes and seconds  |      |   |
|      | Ignore further rounding eg to 16 after 3 or 4 sf answer seen   |      |   |
| 9(b) | The answer is within the range of the data/ close to the intervals with the highest frequencies/in/near the modal class<br>or<br>work out the median and check its similar/compare with the mean                     | B1   | OE  |
|      | <b>Additional Guidance</b>   |      |   |
|      |  |      |   |
| 9(c) | 0.6759(...) or 0.676<br>or 0.6828(...) or 0.683<br>or 0.68   | B2   | B1 for $\sum fx^2 = 12568.125$  |
|      | <b>Additional Guidance</b>   |      |   |
|      | If correct sd is seen then ignore any attempt to change to minutes and seconds<br><b>But</b> penalise by one mark any invalid further working after correct sd seen<br>example<br>sd = 0.68<br>$0.68 \times 50 = 34$ |      | B1  |
|      |  |      |   |

|   |  |        |   |
|---|--|--------|---|
| <b>9(d)</b>   | Correct evaluation of difference between the mean before and after training  | B1ft   | ft their (a) and (c)<br>1.6(4) if their 9a is correct |
|   | Correct comparison in context about the means<br>eg after training he was faster/ he's swimming quicker/his times have decreased | B1 ft  | ft their (a) and (c)                                  |
|   | Correct comparison of sd's in context<br>eg he is now more consistent/ his times are less varied                                 | B1ft   | ft their (a) and (c)                                  |
|   | <b>Additional Guidance</b>   |        |   |
|   | If there are no values for their part a and/or c then they must state the mean and/sd they are using                             |        |   |
|   | eg He decreased his average time by 1.6(4) minutes and his times were minutes more consistent                                    |        | B3  |
|   | eg He decreased his average time by 1.6(4) minutes   |        | B2  |
|   | eg After coaching he was faster and more consistent  |        | B2  |
|   | He was faster after training   |        | B1  |
|   | After training he had a lower mean time  |        | B0  |
| After training his mean was lower by about 1.6 seconds and he was more consistent |  | B1B0B1 |   |

| Q     | Answer   | Mark | Comments   |
|-------|--|------|--|
| 10(a) | <b>Alternative method 1</b>  |      |  |
|       | Occupancy rate of 70% to 85% used<br>eg $0.8 \times 25 = 20$ rooms with 1 bed<br>eg $0.7 \times 10 = 7$ rooms with 2 beds  | B1   | Can be for all 35 rooms<br>eg $0.8 \times 35 = 28$ rooms   |
|       | Makes assumption about average number of sheet changes per room<br>eg 4 times a week<br>20 times per month<br>guests stay on average 4 days so about 7 times per month   | B1   | Accept 2 – 6 changes per week<br>or<br>6 – 26 changes per month<br><br>Must be changes –not number of nights stayed  |
|       | Works out <b>total</b> number of sheet changes per month for <b>double</b> rooms<br>eg their $20 \times$ their 4 per week $\times$ 4 weeks<br>or<br>their 20 rooms $\times$ their 20 times   | M1   | Answers may be rounded eg to nearest 10<br>costs per room may be worked out first and then multiplied by number of sheet changes<br><br>Working out total costs for all their rooms and then multiplying by their number of sheet changes gains M2 |
|       | Works out <b>total</b> number of sheet changes per month for <b>single</b> bed(s) rooms<br>( can use 1 or 2 beds consistently)<br>eg their $8 \times 2 \times$ their 3 per week $\times$ 4 weeks (double occupancy)<br>eg assuming only one bed used<br>their $8 \times$ their 7 changes per month | M1   |  |
|       | Room with double bed costs (£)5.40 or (£)6.40  | B1   | 2 pillowcases or 4 pillowcases used<br>can be implied by their total cost for their number of rooms<br>eg 20 double rooms costs £108 implies $20 \times 5.40$  |
|       | Room with 2 single beds costs (£)7.60 or (£)8.60<br>or<br>room with one single bed used costs (£) 3.8(0) or (£)4.3(0)  | B1   | 2 pillowcases or 4 pillowcases used<br>can be implied by their total cost for a single room  |

|                       |  |    |   |
|-----------------------|--|----|---|
|                       | $x$ sheet changes with double bed $\times$ their cost per room + $y$ sheet changes with (two) single bed(s) $\times$ their cost per room   | M1 |   |
|                       | Correct answer for their calculations (may be rounded)   | A1 | Answers must be rounded to the nearest pound                            |
|                       | <b>Additional Guidance</b>   |    |   |
|                       | students may carry out the above stages of calculation in a different order  |    |   |
|                       | Accept sensible rounding for any stage of their calculations<br>eg estimates on average bed linen is £6 per set (double bed)   |    |   |
| <b>10(a)<br/>cont</b> | <p>Omitting to consider/ use a number of sheet changes per month gains a maximum of 3 marks – 1 for using an occupancy rate and 2 for each of the correct costs per set of double room linen or single room linen</p> <p>Example</p> <p><math>0.81 \times 25 = 21</math> double rooms</p> <p><math>0.81 \times 10 = 8</math> single rooms</p> <p><math>21 \times 2.75 + 21 \times 1.65 + 21 \times 2 \times 0.5 = 113.40</math>      113.4 implies 5.40</p> <p><math>8 \times 2.20 + 8 \times 1.10 + 8 \times 1 = 34.40</math>                      34.4 implies 4.30</p> <p><math>113.40 + 34.40 = 147.80</math></p> <p>no further marks are possible as number of sheet changes has not been considered</p>  |    | <p>B1</p> <p>B1</p> <p>B1</p> <p>M0</p>                                 |
|                       | <p>costs may be used in parts with numbers of rooms and then totalled</p> <p>example</p> <p>assume occupancy rate of 81%</p> <p>double rooms</p> <p><math>0.81 \times 25 = 20.25</math> so assume 20 double rooms used</p> <p><math>20 \times 2.75 = 55</math></p> <p><math>20 \times 1.65 = 33</math></p> <p>4 pillows cost £2 so <math>20 \times £2 = 40</math></p> <p><math>55 + 33 + 40 = 128</math> (cost for 20 double rooms for 1 sheet change-implies <math>20 \times 6.40</math>)</p> <p>assumes stay is on average 2 nights so 15 changes per month</p> <p><math>128 \times 15 = 1920</math></p> <p>rooms with single beds</p> <p><math>0.81 \times 10 = 8</math> rooms</p> <p><math>8 \times 2.20 + 8 \times 1.10 + 8 \times £1 = 34.40</math> (2 pillowcases used)</p> <p><math>34.40 \times 15 = 516</math></p> <p><math>1920 + 516 = 2436</math></p> |    | <p>B1</p> <p>B1</p> <p>B1</p> <p>M1</p> <p>B1</p> <p>M1</p> <p>M1A1</p> |

|                       |   |    |   |
|-----------------------|---|----|---|
| <b>10(a)<br/>cont</b> | <b>Alternative method 2 –works on full occupancy first</b>  |    |   |
|                       | Room with double bed costs (£)5.40 or (£)6.40   | B1 | 2 pillowcases or 4 pillowcases used implied by totals of a particular number of rooms<br>eg (£)135 is 25 rooms at (£)5.40   |
|                       | Room with 2 single beds costs (£)7.60 or (£)8.60<br>or<br>room with one single bed used costs (£) 3.8(0) or (£)4.3(0)   | B1 | 2 pillowcases or 4 pillowcases used implied by totals of a particular number of rooms<br>eg (£)134.40 is 8 rooms at (£)4.30 |
|                       | 25 × their 5.40 + 10 × their 7.60   | M1 | finds total cost of laundry for one change  |
|                       | Makes assumption about average number of sheet changes per room<br>eg 4 times a week<br>20 times per month<br>guests stay on average 4 days so about 7 times per month                        | B1 | Accept 2 – 6 changes per week<br>or<br>6 – 26 changes per month<br><br>Must be changes –not number of nights stayed         |
|                       | Works out <b>total</b> cost of sheet changes per month for <b>all</b> rooms<br>eg their total cost per change × their 4 per week × 4 weeks<br>eg their total cost per change × their 20 times | M1 | Answers may be rounded eg to nearest 10   |
|                       | Occupancy rate of 70% to 85% used   | B1 |   |
|                       | Their cost per month × their occupancy rate   | M1 | their cost per month must include multiplication by the number of sheet changes   |
|                       | Correct answer for their calculations (may be rounded)  | A1 | Answers must be rounded to the nearest pound  |
|                       | <b>Additional Guidance</b>  |    |   |
|                       | Accept sensible rounding for any stage of their calculations<br>eg estimates on average bed linen for double room is £6 per set   |    |   |
|                       | Answers may follow part of each alt eg works out occupancy rate first then finds cost of laundry for all rooms per night  |    |   |

| Q     | Answer   | Mark | Comments |
|-------|--|------|----------|
| 10(b) | Occupancy rate may be (a lot) lower as it's a new hotel<br>or<br>Number of sheet changes may be different as guests may stay longer/ shorter period than estimated<br>or<br>In rooms with two single beds only one bed may need to be changed<br>or<br>Instead of 4 pillows for a double bed there may be only 2 pillows (or vice versa) | E1   | OE       |
|       | <b>Additional Guidance</b>   |      |          |
|       | Just restating their assumptions gains no credit eg I assumed there were 2 pillows per room  | B0   |          |
|       |  |      |          |
