# Management Accounting Pillar <br> Managerial Level Paper <br> <br> P2 - Management Accounting  <br> <br> P2 - Management Accounting Decision Management 

Decision Management}

Instructions to candidates

| You are allowed three hours to answer this question paper. |
| :--- |
| $\begin{array}{l}\text { You are allowed } 20 \text { minutes reading time before the examination begins } \\ \text { during which you should read the question paper and, if you wish, highlight } \\ \text { and/or make notes on the question paper. However, you will not be allowed, } \\ \text { under any circumstances, to open the answer book and start writing or use } \\ \text { your calculator during the reading time. }\end{array}$ |
| $\begin{array}{l}\text { You are strongly advised to carefully read ALL the question requirements } \\ \text { before attempting the question concerned (that is, all parts and/or sub- } \\ \text { questions). The requirements for the questions in Sections B and C are } \\ \text { contained in a dotted box. }\end{array}$ |

ALL answers must be written in the answer book. Answers or notes written on the question paper will not be submitted for marking.

Answer the ONE compulsory question in Section A. This has eight subquestions and is on pages 2 to 4 .

Answer ALL THREE compulsory questions in Section B on pages 6 to 9 .
Answer TWO of the three questions in Section C on pages 10 to 15.
Maths Tables and Formulae are provided on pages 17 to 19. These pages are detachable for ease of reference.

The list of verbs as published in the syllabus is given for reference on the inside back cover of this question paper.

Write your candidate number, the paper number and examination subject title in the spaces provided on the front of the answer book. Also write your contact ID and name in the space provided in the right hand margin and seal to close.

Tick the appropriate boxes on the front of the answer book to indicate which questions you have answered.

## Instructions for answering Section A:

The answers to the eight sub-questions in Section A should ALL be written in your answer book.

Your answers should be clearly numbered with the sub-question number and then ruled off, so that the markers know which sub-question you are answering. For multiple choice questions, you need only write the sub-question number and the letter of the answer option you have chosen. You do not need to start a new page for each sub-question.

For sub-questions 1.6, 1.7 and 1.8 you should show your workings as marks are available for the method you use to answer these sub-questions.

## Question One

1.1 An investment project that requires an initial investment of $\$ 500,000$ has a residual value of $\$ 130,000$ at the end of five years. The project's cash flows have been discounted at the company's cost of capital of $12 \%$ and the resulting net present value is $\$ 140,500$. The profitability index of the project is closest to:

A 0.02
B $\quad 0.54$
C $\quad 0.28$
D $\quad 0.26$
1.2 A project has a net present value of $\$ 320,000$.

The sales revenues for the project have a total pre-discounted value of \$900,000 and a total present value of \$630,000 after tax.

The sensitivity of the investment to changes in the value of sales is closest to:
A $\$ 310,000$
B $\$ 580,000$
C $51 \%$
D $36 \%$
1.3 A company provides a number of different services to its customers from a single office. The fixed costs of the office, including staff costs, are absorbed into the company's service costs using an absorption rate of $\$ 25$ per consulting hour based on a budgeted activity level of 100,000 hours each period.

Fee income and variable costs are different depending on the services provided, but the average contribution to sales ratio is $35 \%$. The breakeven fee income each period is closest to:

A $\$ 1,400,000$
B $\$ 11,500,000$
C $\$ 875,000$
D $\$ 7,143,000$
1.4 A company has recently completed the production of the first unit of a new product. The time taken for this was 12 minutes. The company expects that there will be a $75 \%$ learning rate for this product.

Calculate the total time expected to produce the first four units.

## The following data are given for sub-questions 1.5 and 1.6 below

An investment project with no residual value has a net present value of $\$ 87,980$ when it is discounted using a cost of capital of $10 \%$. The annual cash flows are as follows:

| Year | $\$$ |
| :---: | ---: |
| 0 | $(200,000)$ |
| 1 | 80,000 |
| 2 | 90,000 |
| 3 | 100,000 |
| 4 | 60,000 |
| 5 | 40,000 |

1.5 Calculate the Accounting Rate of Return of the project using the average investment value basis.
(2 marks)
1.6 Calculate the Internal Rate of Return of the project.
1.7 A company manufactures three products. Each of these products use the same type of material but in different quantities. The unit selling prices, cost and profit details are as follows:

| Product | $X$ <br> \$/unit | $Y$ <br> $\$ / u n i t$ | Z <br> \$/unit |
| :--- | :---: | :---: | :---: |
| Selling price | 23 | 26 | 28 |
|  |  |  |  |
| Direct materials | 6 | 8 | 6 |
| Direct labour | 8 | 6 | 8 |
| Variable overhead | 2 | 3 | 3 |
| Fixed overhead | 4 | 5 | 6 |
| Profit | 3 | 4 | 5 |

The direct material used on all three products costs $\$ 10$ per kg . The material available is expected to be limited to 600 kgs for the next accounting period. The maximum demand for each of the products during the next accounting period is expected to be as follows:
X 240 units
Y 600 units
Z 400 units

No inventories of finished products are held.
Calculate the optimum product mix for the next accounting period.
(3 marks)
1.8 A company is launching a new product. Market research shows that if the selling price of the product is $\$ 100$ then demand will be 1,200 units, but for every $\$ 10$ increase in selling price there will be a corresponding decrease in demand of 200 units and for every $\$ 10$ decrease in selling price there will be a corresponding increase in demand of 200 units. The estimated variable costs of the product are $\$ 30$ per unit. There are no specific fixed costs but general fixed costs are absorbed using an absorption rate of $\$ 8$ per unit.

Calculate the selling price at which profit is maximised.
Note: When Price $=a-b x$ then Marginal Revenue $=a-2 b x$

## Reminder

## All answers to Section A must be written in your answer book. Answers to Section A written on the question paper will not be submitted for marking.

End of Section A
Section B starts on page 6

Section $B$ starts on the next page

## SECTION B - 30 MARKS

## [the indicative time for answering this section is 54 minutes]

## ANSWER ALL THREE QUESTIONS

## Question Two

A company is planning to launch a new product. It has already carried out market research at a cost of $\$ 50,000$ and as a result has discovered that the market price for the product should be $\$ 50$ per unit. The company estimates that 80,000 units of the product could be sold at this price before one of the company's competitors enters the market with a superior product. At this time any unsold units of the company's product would be of no value.

The company has estimated the costs of the initial batch of the product as follows:

|  | $\$ 000$ |
| :--- | :---: |
| Direct materials | 200 |
| Direct labour (\$10 per hour) | 250 |
| Other direct costs | 100 |

Production was planned to occur in batches of 10,000 units and it was expected that an $80 \%$ learning curve would apply to the direct labour until the fourth batch was complete. Thereafter the direct labour cost per batch was expected to be constant. No changes to the direct labour rate per hour were expected.

The company introduced the product at the price stated above, with production occurring in batches of 10,000 units. Direct labour was paid using the expected hourly rate of $\$ 10$ and the company is now reviewing the profitability of the product. The following schedule shows the actual direct labour cost recorded:

Cumulative number of batches Actual cumulative direct labour cost

$$
\$ 000
$$

1280
2 ..... 476
4 ..... 809

8

1,376

## Required:

(i) Calculate the revised expected cumulative direct labour costs for the four levels of output given the actual cost of $\$ 280,000$ for the first batch.
(ii) Calculate the actual learning rate exhibited at each level of output.
(iii) Discuss the implications of your answers to (i) and (ii) for the managers of the company.
(10 marks)
(Total for Question Two = 10 marks)

## Question Three

A company operates a fleet of three canal boats that provide cruises for tourists around the canals of a city. The company seeks your advice as to whether it is better to replace its boats every year, every two years or every three years. The company has provided the following data:

$$
\begin{array}{lc} 
& \$ \\
\text { Annual sales revenue from operating each boat } & 800,000 \\
\text { Purchase cost of each boat } & 400,000
\end{array}
$$

Operating costs, which include maintenance, servicing, and similar costs are paid at the end of each year. Operating costs and end of year trade-in values vary depending on the age of the boat and are as follows for each year of the boat's life:

| Year | Operating Costs | Trade-in values |
| :---: | :---: | :---: |
|  | $\$$ | $\$$ |
| 1 | 300,000 | 240,000 |
| 2 | 400,000 | 150,000 |
| 3 | 600,000 | 80,000 |

These costs do not include depreciation or any other fixed costs of providing the tourist service. These other fixed costs are a constant \$100,000 per year regardless of the age of the boat.

The company uses an $8 \%$ cost of capital for its investment decisions.

## Required:

(a) Produce calculations to determine the optimum replacement cycle of the boats and state clearly your recommendations. Ignore taxation.
(6 marks)

The same company is also considering investing in one of three marketing campaigns to increase its profitability. All three marketing campaigns have a life of five years, require the same initial investment and have no residual value. The company has already evaluated the marketing campaigns taking into consideration the range of possible outcomes that could result from the investment. A summary of the calculations is shown below:

Marketing Campaign J K L

| Expected Net Present Value | $\$ 400,000$ | $\$ 800,000$ | $\$ 400,000$ |
| :--- | ---: | :--- | :--- |
| Standard Deviation of Net Present Value | $\$ 35,000$ | $\$ 105,000$ | $\$ 105,000$ |

## Required:

(b)
(i) Explain the meaning of the data shown above; and
(ii) Briefly explain how the data may be used by the company when choosing between alternative investments.
(4 marks)
(Total for Question Three = 10 marks)

## Question Four

$Z$ is one of a number of companies that produce three products for an external market. The three products, R, S and T may be bought or sold in this market.

The common process account of $Z$ for March 2007 is shown below:

|  | $K g$ | $\$$ |  |  | $K g$ |
| :--- | :---: | ---: | :--- | ---: | ---: |
| Inputs: |  |  |  | $\$$ |  |
| Material A | 1,000 | 3,500 | Normal loss | 500 | 0 |
| Material B | 2,000 | 2,000 | Outputs: |  |  |
| Material C | 1,500 | 3,000 | Product R | 800 | 3,500 |
| Direct labour |  | 6,000 | Product S | 2,000 | 8,750 |
| Variable overhead |  | 2,000 | Product T | 1,200 | 5,250 |
| Fixed cost |  | 1,000 |  |  |  |
|  |  |  |  | 4,500 | 17,500 |

$Z$ can sell products $R$, $S$ or $T$ after this common process or they can be individually further processed and sold as RZ, SZ and TZ respectively. The market prices for the products at the intermediate stage and after further processing are:

Market prices per kg:

|  | $\$$ |
| :--- | :---: |
| $R$ | 3.00 |
| $S$ | 5.00 |
| T | 3.50 |
| RZ | 6.00 |
| SZ | 5.75 |
| TZ | 6.75 |

The specific costs of the three individual further processes are:
Process $R$ to RZ variable cost of $\$ 1.40$ per kg, no fixed costs
Process S to SZ variable cost of $\$ 0.90$ per kg, no fixed costs
Process T to TZ variable cost of $\$ 1.00$ per kg, fixed cost of $\$ 600$ per month

## Required:

(a) Produce calculations to determine whether any of the intermediate products should be further processed before being sold. Clearly state your recommendations together with any relevant assumptions that you have made.
(b) Produce calculations to assess the viability of the common process:
(i) assuming that there is an external market for products R,S and T; and
(ii) assuming that there is not an external market for products $R, S$ and $T$.

State clearly your recommendations.

## End of Section B <br> Section $C$ starts on the next page

## SECTION C - 50 MARKS

## [the indicative time for answering this section is 90 minutes]

ANSWER TWO QUESTIONS OUT OF THREE

## Question Five

X operates in an economy that has almost zero inflation. Management ignores inflation when evaluating investment projects because it is so low as to be considered insignificant. X is evaluating a number of similar, alternative investments. The company uses an after tax cost of capital of $6 \%$ and has already completed the evaluation of two investments. The third investment is a new product that would be produced on a just-in-time basis and which is expected to have a life of three years. This investment requires an immediate cash outflow of $\$ 200,000$, which does not qualify for tax depreciation. The expected residual value at the end of the project's life is $\$ 50,000$. A draft financial statement showing the values that are specific to this third investment for the three years is as follows:

|  | Year 1 <br> $\$$ | Year 2 <br> $\$$ | Year 3 <br> $\$$ |
| :--- | ---: | ---: | ---: |
| Sales |  |  |  |
| Production costs: <br> $\quad$ Materials | 230,000 | 350,000 | 270,000 |
| $\quad$ Labour | 54,000 | 102,000 | 66,000 |
| Other* | 60,000 | 80,000 | 70,000 |
| Profit | 80,000 | 90,000 | 80,000 |
|  |  |  |  |
| Closing receivables | 20,000 | 78,000 | 54,000 |
| Closing payables | 6,000 | 9,000 | 8,000 |

*Other production costs shown above include depreciation calculated using the straight line method.

The company is liable to pay corporation tax at a rate of $30 \%$ of its profits. One half of this is payable in the same year as the profit is earned, the remainder is payable in the following year.

## Required:

(a) Calculate the net present value of the above investment proposal.
(10 marks)
(b) Explain how the above investment project would be appraised if there were to be a change in the rate of inflation so that it became too significant to be ignored.
(5 marks)

The evaluations of the other two investments are shown below:

| Investment | Initial investment | Net Present Value |
| :---: | :---: | :---: |
|  | $\$$ | $\$$ |
| W | 300,000 | 75,000 |
| Y | 100,000 | 27,000 |

The company only has $\$ 400,000$ of funds available. All of the investment proposals are nondivisible. None of the investments may be repeated.

## Required:

(c) Recommend, with supporting calculations, which of the three investment proposals should be accepted.
(d)
(i) Briefly explain gain sharing arrangements.
(ii) Explain the reasons why X might not want to overcome its investment funding limitations by using a gain sharing arrangement.

## Question Six

H, a printing company, uses traditional absorption costing to report its monthly profits.
It is seeking to increase its business by winning work from new customers. It now has the opportunity to prepare a quotation for a large organisation that currently requires a new catalogue of its services.

A technical report on the resource requirements for the catalogues has been completed at a cost of $\$ 1,000$ and its details are summarised below:

## Production period

It is expected that the total time required to print and despatch the catalogue will be one week.

## Material A

10,000 sheets of special printing paper will be required. This is a paper that is in regular use by H and the company has 3,400 sheets in inventory. These originally cost $\$ 1.40$ per sheet but the current market price is $\$ 1.50$ per sheet. The resale price of the sheets held in inventory is $\$ 1.20$ per sheet.

## Material B

This is a special ink that H will need to purchase at a cost of $\$ 8$ per litre. 200 litres will be required for this catalogue but the supplier has a minimum order size of 250 litres. H does not foresee any other use for this ink, but will hold the surplus in inventory. H's inventory policy is to review slow moving items regularly. The cost of any inventory item that has not been used for more than 6 months is accounted for as an expense of the period in which that review occurs.

## Direct labour

Sufficient people are already employed by H to print the catalogue, but some of the printing will require overtime working due to the availability of a particular machine that is used on other work. The employees are normally paid $\$ 8$ per hour, the order will require 150 hours of work and 50 of these hours will be in excess of the employees' normal working week. A rate of $\$ 10$ per hour is paid for these overtime hours. Employees are paid using an hourly rate with a guaranteed minimum wage for their normal working week.

## Supervision

An existing supervisor will take responsibility for the catalogue in addition to her existing duties. She is not currently fully employed and receives a salary of $\$ 500$ per week.

## Machinery

Two different types of machine will be required:
Machine A will print the catalogues. This is expected to take 20 hours of machine time. The running cost of machine $A$ is $\$ 5$ per hour. There is currently 30 hours of unused time on machine A per week that is being sold to other printers for $\$ 12$ per hour.

Machine $B$ will be used to cut and bind the catalogues. This machine is being used to full capacity in the normal working week and this is why there is a need to work overtime. The catalogue will require 25 machine hours and these have a running cost of $\$ 4$ per hour.

## Despatch

There will be a delivery cost of $\$ 400$ to transport the catalogues to the customer.

## Fixed overhead costs

$H$ uses a traditional absorption costing system to attribute fixed overhead costs to its work. The absorption rate that it uses is $\$ 20$ per direct labour hour.

## Profit mark-up

H applies a 30\% mark-up to its costs to determine its selling prices.

## Required:

(a) In order to assist the management of H in preparing its quotation, prepare a schedule showing the relevant costs for the production of the catalogues. State clearly your reason for including or excluding each value that has been provided in the above scenario.
(b) Explain how the use of relevant costs as the basis of setting a selling price may be appropriate for short-term pricing decisions but may be inappropriate for long-term pricing decisions. Your answer should also discuss the conflict between reporting profitability within a traditional absorption costing system and the use of relevant cost based pricing.

## Question Seven

D provides a motorist rescue service to its members. At present all members pay a basic fee of $\$ 100$ per year but $D$ is considering the introduction of different fees for members depending on the data they provide when joining the service. The number of members, and therefore the fee income of $D$, is uncertain but the following estimates have been made:

| Number of members | Probability |
| :---: | :---: |
| 20,000 | $0 \cdot 3$ |
| 30,000 | $0 \cdot 5$ |
| 40,000 | $0 \cdot 2$ |

## Required:

(a) Calculate the expected annual fee income of $D$.
(2 marks)

The operating costs to be incurred by D have been analysed between call-out costs and administration costs. These operating costs have been assumed to vary in relation to the number of members and consequently the average costs per member for next year are expected to be:

## Call-out cost per member for the year \$50 <br> Administration cost per member for the year \$10

Each of these operating costs may vary by plus or minus $20 \%$. There is equal probability of these costs being as expected, $20 \%$ higher, or $20 \%$ lower. In addition D expects to incur annual fixed costs of $\$ 1,100,000$.

## Required:

(b) Using Expected Values, calculate the breakeven number of members.
(3 marks)
(c) Prepare a two-way data table that shows the nine possible profit values.
(6 marks)
(d) Explain the meaning of table that you have produced in (c) above and, by including appropriate probability values, how it may be used by management.
(4 marks)

Now that you have presented your calculations and explanations to the Management Team of D they have questioned the validity of the assumption that costs are caused by and therefore vary in relation to the number of members. They referred to the activities that are performed by the company:

- Processing applications for membership;
- Operating the call centre that deals with logging and scheduling rescues;
- Providing patrol vehicles and mechanics for breakdown assistance;
- Recording details of the time taken to respond to members' rescues;
- Recording details of the costs incurred in carrying out each rescue.

The Management Team collectively agreed that your assumption that operating costs are driven by the number of members was too simplistic and that in future the Administration department should request the following information from members:

- Member's date of birth;
- Member's address;
- Number of years the member has been a qualified driver;
- Age of vehicle;
- Make and model of vehicle;
- Average annual mileage.

## Required:

(e) Explain how and why the collection of this data from members might improve the information that would be available to the Management Team.
(10 marks)
(Total for Question Seven = 25 marks)
[this page is blank]

## PRESENT VALUE TABLE

Present value of $\$ 1$, that is $(1+r)^{-n}$ where $r=$ interest rate; $n=$ number of periods until payment or receipt.

| Periods | Interest rates $(r)$ |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $n)$ | $1 \%$ | $2 \%$ | $3 \%$ | $4 \%$ | $5 \%$ | $6 \%$ | $7 \%$ | $8 \%$ | $9 \%$ |  |
| 1 | 0.990 | 0.980 | 0.971 | 0.962 | 0.952 | 0.943 | 0.935 | 0.926 | 0.917 | 0.909 |  |
| 2 | 0.980 | 0.961 | 0.943 | 0.925 | 0.907 | 0.890 | 0.873 | 0.857 | 0.842 | 0.826 |  |
| 3 | 0.971 | 0.942 | 0.915 | 0.889 | 0.864 | 0.840 | 0.816 | 0.794 | 0.772 | 0.751 |  |
| 4 | 0.961 | 0.924 | 0.888 | 0.855 | 0.823 | 0.792 | 0.763 | 0.735 | 0.708 | 0.683 |  |
| 5 | 0.951 | 0.906 | 0.863 | 0.822 | 0.784 | 0.747 | 0.713 | 0.681 | 0.650 | 0.621 |  |
| 6 | 0.942 | 0.888 | 0.837 | 0.790 | 0.746 | 0705 | 0.666 | 0.630 | 0.596 | 0.564 |  |
| 7 | 0.933 | 0.871 | 0.813 | 0.760 | 0.711 | 0.665 | 0.623 | 0.583 | 0.547 | 0.513 |  |
| 8 | 0.923 | 0.853 | 0.789 | 0.731 | 0.677 | 0.627 | 0.582 | 0.540 | 0.502 | 0.467 |  |
| 9 | 0.914 | 0.837 | 0.766 | 0.703 | 0.645 | 0.592 | 0.544 | 0.500 | 0.460 | 0.424 |  |
| 10 | 0.905 | 0.820 | 0.744 | 0.676 | 0.614 | 0.558 | 0.508 | 0.463 | 0.422 | 0.386 |  |
| 11 | 0.896 | 0.804 | 0.722 | 0.650 | 0.585 | 0.527 | 0.475 | 0.429 | 0.388 | 0.350 |  |
| 12 | 0.887 | 0.788 | 0.701 | 0.625 | 0.557 | 0.497 | 0.444 | 0.397 | 0.356 | 0.319 |  |
| 13 | 0.879 | 0.773 | 0.681 | 0.601 | 0.530 | 0.469 | 0.415 | 0.368 | 0.326 | 0.290 |  |
| 14 | 0.870 | 0.758 | 0.661 | 0.577 | 0.505 | 0.442 | 0.388 | 0.340 | 0.299 | 0.263 |  |
| 15 | 0.861 | 0.743 | 0.642 | 0.555 | 0.481 | 0.417 | 0.362 | 0.315 | 0.275 | 0.239 |  |
| 16 | 0.853 | 0.728 | 0.623 | 0.534 | 0.458 | 0.394 | 0.339 | 0.292 | 0.252 | 0.218 |  |
| 17 | 0.844 | 0.714 | 0.605 | 0.513 | 0.436 | 0.371 | 0.317 | 0.270 | 0.231 | 0.198 |  |
| 18 | 0.836 | 0.700 | 0.587 | 0.494 | 0.416 | 0.350 | 0.296 | 0.250 | 0.212 | 0.180 |  |
| 19 | 0.828 | 0.686 | 0.570 | 0.475 | 0.396 | 0.331 | 0.277 | 0.232 | 0.194 | 0.164 |  |
| 20 | 0.820 | 0.673 | 0.554 | 0.456 | 0.377 | 0.312 | 0.258 | 0.215 | 0.178 | 0.149 |  |

| Periods |  |  |  |  |  |  |  |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: |
| $(n)$ | Interest rates $(r)$ |  |  |  |  |  |  |  |  |  |  |

## FORMULAE

## Time series

Additive model:
Series = Trend + Seasonal + Random

Multiplicative model:
Series = Trend*Seasonal*Random

## Regression analysis

The linear regression equation of $Y$ on $X$ is given by:

$$
Y=a+b X \quad \text { or } \quad Y-\bar{Y}=b(X-\bar{X}),
$$

where:

$$
b=\frac{\operatorname{Covariance}(X Y)}{\operatorname{Variance}(X)}=\frac{n \sum X Y-\left(\sum X\right)\left(\sum Y\right)}{n \sum X^{2}-\left(\sum X\right)^{2}}
$$

and

$$
a=\bar{Y}-b \bar{X}
$$

or solve

$$
\begin{aligned}
& \sum Y=n a+b \sum X \\
& \sum X Y=a \sum X+b \sum X^{2}
\end{aligned}
$$

Exponential $\quad Y=a b^{x}$
Geometric
$Y=a X^{b}$

## Learning curve

$$
Y_{x}=a X^{b}
$$

where:
$Y_{x}=$ the cumulative average time per unit to produce $X$ units;
$a=$ the time required to produce the first unit of output;
$X=$ the cumulative number of units;
$b=$ the index of learning.
The exponent $b$ is defined as the log of the learning curve improvement rate divided by log 2 .

## LIST OF VERBS USED IN THE QUESTION REQUIREMENTS

A list of the learning objectives and verbs that appear in the syllabus and in the question requirements for each question in this paper.

It is important that you answer the question according to the definition of the verb.

| LEARNING OBJECTIVE | VERBS USED | DEFINITION |
| :---: | :---: | :---: |
| 1 KNOWLEDGE |  |  |
| What you are expected to know. | List | Make a list of |
|  | State | Express, fully or clearly, the details of/facts of |
|  | Define | Give the exact meaning of |
| 2 COMPREHENSION |  |  |
| What you are expected to understand. | Describe | Communicate the key features |
|  | Distinguish | Highlight the differences between |
|  | Explain | Make clear or intelligible/State the meaning of |
|  | Identify | Recognise, establish or select after consideration |
|  | Illustrate | Use an example to describe or explain something |
| 3 APPLICATION |  |  |
| How you are expected to apply your knowledge. | Apply | To put to practical use |
|  | Calculate/compute | To ascertain or reckon mathematically |
|  | Demonstrate | To prove with certainty or to exhibit by practical means |
|  | Prepare | To make or get ready for use |
|  | Reconcile | To make or prove consistent/compatible |
|  | Solve | Find an answer to |
|  | Tabulate | Arrange in a table |
| 4 ANALYSIS |  |  |
| How are you expected to analyse the detail of what you have learned. | Analyse | Examine in detail the structure of |
|  | Categorise | Place into a defined class or division |
|  | Compare and contrast | Show the similarities and/or differences between |
|  | Construct | To build up or compile |
|  | Discuss | To examine in detail by argument |
|  | Interpret | To translate into intelligible or familiar terms |
|  | Produce | To create or bring into existence |
| 5 EVALUATION |  |  |
| How are you expected to use your learning to evaluate, make decisions or recommendations. | Advise | To counsel, inform or notify |
|  | Evaluate | To appraise or assess the value of |
|  | Recommend | To advise on a course of action |
