

UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

Pre-U Certificate

**MARK SCHEME for the May/June 2012 question paper
for the guidance of teachers**

**1347 MATHEMATICS (STATISTICS WITH PURE
MATHEMATICS)**

1347/02

Paper 2 (Statistics), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2012 question papers for most IGCSE, Pre-U, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2012	1347	02

Note: since there were no candidates this session, this mark scheme is a draft, and has not been modified in light of candidates' responses.

1 (i)	$S_{xx} = 1939552 - \frac{(4412)^2}{13} = 442187$	B1	442187 to nearest integer
	$S_{yy} = 605147 - \frac{(2387)^2}{13} = 166857$	B1	166857 to nearest integer
	$S_{xy} = 1074848 - \frac{4412 \times 2387}{13} = 264737$	B1	264737 to nearest integer
	$r = \frac{264737}{\sqrt{442187 \times 166857}} = 0.975 \text{ (0.9746)}$	M1	Calculating r from their S_{xx} , S_{yy} and S_{xy} (numerical working or their r value correct to 3 sf or better)
r is near 1, so a good fit to an upward sloping line	A1 [5]	Drawing a valid conclusion (confirming that a linear fit is appropriate, as stated in question)	
(ii)	$b = \frac{264737}{442187} = 0.599 \text{ (0.5987)}$	M1	Calculating b from their S_{xx} , S_{xy}
	$a = \frac{2387}{13} - 0.5987 \times \frac{4412}{13}$	M1	Calculating a from $\sum x$, $\sum y$ and their b
	$= 183.6 - 0.5987 \times 339.4 = -19.6$	A1	Line correct with coefficients to 3sf or better
	$y = 0.599x - 19.6$	B1 [4]	From their line (± 2)
(iii)	Extrapolation beyond range of data	B1	Extrapolation
	Small sample / only based on one sample Sampling method not known / not random sampling London is not typical / London 'is different'	B1 [2]	Any valid objection

Page 3	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2012	1347	02

2 (i)	Median = 30 mpg Quartiles = 34 mpg and 23 mpg IQR = 11 mpg Outliers have mpg < 6.5 or > 50.5 ⇒ Toyota Prius	B1 B1 M1 A1 B1 [5]	30 cao Accept 33 to 35 and 20 to 24 Their IQR calculated Fences calculated for their quartiles Identified by name in any way (follow through their fences to at most three outliers)
(ii)	The difference between 23 and 30 is much greater than the difference between 30 and 34, this suggests that the distribution is not symmetric	B1 [1]	Using median and quartile values appropriately to deduce non-normal
(iii)	$\begin{array}{cccccccccccccccc} 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 & 11 & 12 & 13 & 14 & 15 \\ 1 & 2 & 12 & 3 & 4 & 5 & 6 & 7 & 8 & 11 & 9 & 10 & 13 & 14 & 15 \\ \hline 0 & 0 & -9 & 1 & 1 & 1 & 1 & 1 & 1 & -1 & 2 & 2 & 0 & 0 & 0 \end{array}$ $\Sigma d^2 = 96$ $r_s = 1 - \frac{6 \times 96}{15 \times 224} = 1 - 0.17143 = 0.82857$ $= 0.829$ (3 sf)	M1 A1 M1 A1 [4]	Substantially correct calculation of d or $ d $ or d^2 for the ranks Correct calculation of r_s for their Σd^2 Correct value, to 3 sf or better

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2012	1347	02

3 (i)	Independence between children, class are typical of population in respect of left-handedness	B1 B1 [2]	Independence (random sample) Probability 13% (constant probability)
(ii)	$X = \text{number of left-handers}$ $X \sim B(20, 0.13)$ 13% of 20 = 2.6, so want $P(X \leq 2)$ $(0.87)^{20} + 20(0.13)(0.87)^{19} + 190(0.13)^2(0.87)^{18}$ = 0.061714 + 0.18443 + 0.26181 = 0.50795... = 0.508 to 3sf	B1 M1 A1 A1 [4]	$P(X \leq 2)$ is needed Calculating a probability in $B(20, 0.13)$ (At least) three correct probabilities added 0.508 or better
(iii)	$X \sim B(20, p)$ $p = P(\text{left-hander})$ $H_0: p = 0.13$ $H_1: p > 0.13$ $\alpha = 5\%$ one-tailed test Assuming H_0 , $X \sim B(20, 0.13)$ $P(X \geq 7) = 1 - 0.9897 = 0.0103$ or $cv = 6$ $0.0103 < 5\%$ or $7 > 6$ Reject H_0 Evidence supports claim, significantly more of the most recent twenty presidents were left-handed than would be expected by chance	B1 B1 M1 M1 A1 B1 [6]	May imply definition of p Null hypothesis $p = 0.13$ Alternative hypothesis $p > 0.13$ Omission of p only penalised once May imply level of test and one-tailed Calculating $P(X \leq 7)$ or critical value ($cv = 7$ for a two-sided H_1) Compare with 5% (or $2\frac{1}{2}\%$ for a two-sided H_1) or compare cv with observed value 7 Reject H_0 , from correct calculations Correct conclusion in context
(iv)	Schools trained pupils to write with their right hand in the past Left-handedness was not recorded accurately in the past Not random samples, could be due to sample variation	B1 [1]	Any valid reason, either from context (reasons why sample from past data may be different from sample from current data) or addressing statistical variation (random fluctuation)

Page 5	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2012	1347	02

4 (i)	$P(Z > z) = 0.01 \Rightarrow z = 2.326$ $P(Z < z) = 0.25 \Rightarrow z = -0.674$ $2.326 = \frac{120 - \mu}{\sigma} \Rightarrow 120 - \mu = 2.326\sigma$ $-0.674 = \frac{84 - \mu}{\sigma} \Rightarrow 84 - \mu = -0.674\sigma$ $\Rightarrow \mu = 92.1, \sigma = 12$	B1 M1 A1 B1 B1 [5]	2.326 and 0.674 from tables Substantially correct method (either) Both correct for their z-values, one of which is positive and one negative 92.1 or 92 (cao) 12 (cao)
(ii)	H_0 : samples come from same populations H_1 : S tend to have larger increases than N (S have smaller rank values than N) One-tailed test, $\alpha = 5\%$ Rank sum for S = 1 + 3 + 4 + 5 + 6 + 8 $\Rightarrow W = 27$ $m = 6$ $n = 10 \Rightarrow$ critical value for $W = 35$ Reject H_0 At the 5% level the data support the claim that the increases are greater for the smokers than for the non-smokers	B1 M1 A1 B1 B1 [5]	Appropriate statement of hypotheses Attempt to sum ranks (27 or 109) $W = 27$ from correct working Critical value 35 Correct conclusion, in context, from use of Wilcoxon rank-sum
(iii)	For the smokers, $\sum x = 708 \Rightarrow \bar{x} = 118$ Estimate $\hat{\mu}_s = 118$ $\sum x^2 = 83864 \Rightarrow S_{xx} = 320 \Rightarrow s^2 = 64$ Estimate $\hat{\sigma}_s^2 = 64$	B1 M1 A1 [3]	Mean 118 cao Sight of one of 83864, 320, 64, 8, 53.3 or 7.30 Variance 64 cao
(iv)	$\bar{X} \sim N(\mu_s, \frac{\sigma_s^2}{n})$ where $\hat{\sigma}_s = 8$ and $n = 6$ Critical values in $t(5)$ are ± 2.571 Confidence interval is $118 \pm 2.571 \times \frac{8}{\sqrt{6}}$ $= 118 \pm 8.4 = [109.6, 126.4]$	B1 M1 A1 [3]	Using t tables to find 2.571 or 2.447 Correct method for their “ t ” value and their $\bar{x}, \hat{\sigma}$ Interval correct, in any appropriate form (follow through their values from part (iii))

Page 6	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2012	1347	02

5 (i)	$x = 47 \rightarrow z = 0.667; x = 51 \rightarrow z = 2.0$	B1	$z = 2$ and 0.667 seen or implied																				
	$P(47 < X \leq 51) = 0.9772 - 0.7477$	M1	0.9772 and 0.7477 seen or implied																				
	Expected frequency = $0.2295 \times 100 = 22.95$	A1 [3]	Subtract and multiply by 100 (22.95 given in question)																				
(ii)	Merge classes in tails to make expected frequencies at least 5	B1	Merging tails correctly																				
	<table border="0"> <tr> <td>Weight</td> <td><43</td> <td>43-45</td> <td>45-47</td> <td>>47</td> </tr> <tr> <td>Obs freq</td> <td>32</td> <td>24</td> <td>30</td> <td>14</td> </tr> <tr> <td>Exp freq</td> <td>25.23</td> <td>24.77</td> <td>24.77</td> <td>25.23</td> </tr> <tr> <td>(O-E)²/E</td> <td>1.82</td> <td>0.02</td> <td>1.10</td> <td>5.00</td> </tr> </table>	Weight	<43	43-45	45-47	>47	Obs freq	32	24	30	14	Exp freq	25.23	24.77	24.77	25.23	(O-E) ² /E	1.82	0.02	1.10	5.00	M1	Substantially correct calculation of X^2 (with or without merging)
	Weight	<43	43-45	45-47	>47																		
	Obs freq	32	24	30	14																		
	Exp freq	25.23	24.77	24.77	25.23																		
(O-E) ² /E	1.82	0.02	1.10	5.00																			
X^2 calc = 7.94	A1	7.94, or art 7.94, from correct method , cao																					
H_0 : N(45, 9) distribution H_1 : some other distribution	B1	Any correct statement of H_0 Accept 'normal distribution'																					
From tables, critical value = 7.815	B1	7.815, from tables, cao																					
Reject H_0 Data is not consistent with a N(45, 9) distribution	B1 [6]	Correct conclusion, and interpretation in words, for their X^2 value																					
(iii)	$v = n - 1 = 4 - 1 = 3$	B1 [1]	4 classes – 1 restriction (total), or equivalent																				
	No need to reduce df for parameters as not estimated from sample data																						
(iv)	(a) Variance cannot be estimated, midpoints cannot be found for first and last classes since boundaries are not known	B1 [1]	Variance unknown since grouped data. Estimate of variance unlikely to be very accurate.																				
	(b) Sign test	B1	Sign test or binomial test or equivalent (e.g. test proportion that are below 45)																				
	H_0 : median = 45 $\alpha = 5\%$ H_1 : median \neq 45 two-tailed test																						
	Y = number of chicks with weight \leq 45g Assuming H_0 , $Y \sim B(100, 0.5)$	M1	Or using proportions An appropriate distribution or approximating distribution																				
	Approximate by N(50, 25) Critical values are $50 \pm 1.96 \times 5 = 50 \pm 9.8$ = [40.2, 59.8]	A1	Critical values correct (or with proportions) Or test observed proportions (or values) to give a tail probability of 0.115 (or 0.136)																				
	Observed $y = 56$ (or 44 above)																						
	Accept H_0 Data are consistent with a distribution with median = 45. No evidence that median is not 45	B1 [4]	Accept H_0 , follow through their critical values from substantially correct method , or interpretation in words
