

Mark Scheme (Results) June 2010

Principal Learning

Environmental and Land-based Studies ES205 Plants and Animals and their Role in Society Edexcel is one of the leading examining and awarding bodies in the UK and throughout the world. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers.

Through a network of UK and overseas offices, Edexcel's centres receive the support they need to help them deliver their education and training programmes to learners.

For further information, please call our Diploma Line on 0844 576 0028, or visit our website at www.edexcel.com.

If you have any subject specific questions about the content of this Mark Scheme that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Ask The Expert can be accessed online at the following link:

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Question number	Correct answer	Mark
1 (a)	Photosynthesis (1), decomposing (1)	2
1 (b)	Plant A in "evergreen+seeds"; plants C & B in	_
	"deciduous+seeds"; plant D in "evergreen+no seeds". 2 marks	
	if all 4 correct; 1 mark if 2-3 correct.	2
Question	Correct answer	Mark
number		
2 (a)	Pig = farm; parrot = family; greyhound = sports; alligator = zoo. 1 mark each. No exceptions because q. asks for "most suitable".	4
2 (b)	Name any 2 (incl. frog) from list. No marks. Any appropriate characteristic for candidate's chosen location e.g. pigs on farm because large meat producers; parrot in family home because easy to handle/maintain, "talk", companionable; greyhound at sports venue because fast, trainable; alligator in zoo because dangerous; frog in medical research centre because easy to breed, short/fast life span to measure effects of experiments, valuable genetic traits (skin chemicals, cell growth) BUT also does not have to be "correct" location as specified in (a). E.g. greyhound in family home because dogs are trainable, companionable, can be kept inside a house. 1 mark per characteristic. Characteristics must be specific not generic e.g. no marks for "sports location for dogs to run fast" but credit "has track for dogs to run fast". Characteristics of animal need to match chosen location.	4
Question	Correct answer	Mark
number		
3 (a)	Potatoes	1
3 (b)	Difference between "protected cropping" and "crop protection" – must be greenhouses, cloches, mulch, fencing not pesticides, etc. Must be QUALITY not QUANTITY -point mark per fact/description/development. One of e.g. protected from damage by elements; monitor and control temperature, light, water to maximise health of plant Accept any reasonable quality improvement.	2
3 (c)(i)	Must write in activity+species to get 1 mark. Specific species need to be named, not generic like grass/tree/bush. Accept any reasonable species. Must state "HOW" as a sentence not just a list of characteristics – only 1 mark for a list. 1 mark per characteristic up to 3 marks or 2 characteristics with 1 developed e.g.	1
(ii)	Christmas trees – Norwegian spruce: quick growing, shape, size for homes, colour, few inputs needed. Allow conifer. Flowers – tulips: all year round production under glass; cut flowers very profitable, world-wide market; bulbs require far fewer inputs. Must write in activity+species to get 1 mark. Specific species need to be named, not generic like grass/tree/bush. Accept any reasonable species. 1 mark per association/benefit up to 2 marks. Must be at least 1	3

	explanation for 3 marks e.g. Golf course - rye grass: fine, dense growth, colour, durable in terms of trampling – benefits greens; constant cutting, fertilising, watering, research - benefits growth and health of grass. Ornamental garden - rhododendrons: colourful/ornamental for landscaping/separating activities, quick growing, spread rapidly - benefits garden; fertilising, use of fungicides/insecticides, interplanting with other species, hybridisation – benefits health/quality and number of plants.	3
Question number	Correct answer	Mark
4 (a)	1 mark per effect up to 2 marks if just a list eg smell, pollution, waste. Up to 4 marks if some associated detail e.g. smell from ventilation of chicken sweat, use of fossil fuel for generating electricity. OR 3 effects + 1 developed OR 2 effects + both developed e.g. Manure dump in the open - when it rains pollutants and bacteria can get washed into streams/water supply, over a wide area	4
4 (b)	Up to 2 marks for identifying responsibilities to e.g. environment, humane treatment of animals, owners of the farm, workers, customers/public. Up to 3 marks for explaining. Must explain the RESPONSIBILTY not just their actions e.g. responsibility to owners to make a profit – may need to adapt to changing market OR cost of change will erode profits. Responsibility to public to provide affordable/safe food – non-battery chickens may be too expensive for certain sectors OR battery chickens are prone to disease which may be passed to the public.	5
Question	Correct answer	Mark
5 (a)	Name method (1 mark) and/or some description of it (up to 2 marks) e.g. measuring noise level, air quality, water quality, monitoring plant/animal species numbers/location, viewscore, Leopold matrix, assessing carbon footprint, traffic/people count, measuring footpath erosion.	2
5 (b)	Must be risks/hazards not limitations of method. 2 risks identified (1 mark each). Must be related to the technique in 5(a) e.g. noise level = danger from traffic; water quality = steep banks, flood waters, drowning; any outside activity = potential hazards of landscape (cliffs, rocks, falling, breaking leg), weather (sudden extreme changes, fog, lose way, hypothermia), animals (bulls, wasps, adders)	2
5 (c)	1 mark for a conservation practice e.g. (1)screening with trees/bushes, low level building, colour/design/layout of caravans/buildings; (2) do environmental impact study, protect certain areas; (3) pay for environmental monitoring for 5 years; (4) provide bins, signs, fines/penalties, cooperate with Env Agency/water company re:water sampling; (5) Offset carbon footprint eg use own wind/solar power; (6) charge traffic/parking – use money to subsidise park ranger or env. project; (7)	ES205_01 1006

manage footpaths using fences/barriers/notices 1 mark for explaining benefit to the business, 1 mark for benefit to local community, 1 mark for a development e.g. Using wind/solar power may reduce electricity bill for caravan park therefore cheaper to stay therefore more campers come. During the off season the power can be fed into the local grid benefitting the local community. It will also provide an income for the park during the winter/less fossil fuels will be used which benefits the community. Question number 6 (a) Must be on "food web" not just on animals. Simple statements or list of effects, no grasp of links e.g. reeds killed off under caravan standings; less food for some animals so numbers go down; pollution/poisons can be passed through the food web. 2 marks – 1 mark per effect/statement Develop each statement with clear links eg tadpoles could disappear completely which in the long run may reduce the food for birds such as coots. - use technical terms appropriately/correctly e.g. producers, consumers, biomass - overall view/qualifying statement e.g. web would become more simple with a few chains rather than a web OR caravan park might increase some numbers e.g. increase in rubbish leads to increase in seagulls, increase in organic matter in water, increase in algae. 6 (b) Levels marking — Level 1 – Identifies 1-2 issues (must be on "reducing") in simple terms e.g. killing defenceless creatures is wrong, culling needs to be painless, young can be left unprotected and parentless. 1 mark per issue OR 1 issue developed = 2 marks Level 2 – 2 issues stated 1 developed. 3 marks - 2 issues stated both developed 4 marks - 1f only does 1 issue with several developments up to max. 3 marks because q. asks for "issues". Level 3 – shows both sides of the argument e.g. killing may be wrong but if don't reduce numbers an even larger number may die through overpopulation and lack of food OR on the one hand shouldn't make animals suffer pain but on the other very few animals die of old age, nature is
