Geography

PAPER 1: Physical geography

You must have:

Resource Booklet (enclosed), calculator

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- In Section A, answer **two** questions from Questions 1, 2 and 3.
- In Section B, answer **one** question from Questions 4, 5 and 6.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- Where asked you must **show all your working out** with **your answer clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 62.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

Q:1/1/1/1/1

Pearson

SECTION A

Answer TWO questions from this section.

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

If you answer Question 1 put a cross in the box ☒ .

1 River environments

(a) Identify the characteristic usually found in the upper course of a river. (1)

- A frequent meanders
- B ox bow lakes
- C steep valley sides
- D slow river velocity

(b) (i) Identify the best definition of a river mouth. (1)

- A bend in a river
- B starting point of a river
- C where two rivers meet
- D where a river meets the sea

(ii) State **one** store in the hydrological cycle. (1)

(c) Explain **one** weathering process in a river valley. (2)

.....

(Total for Question 1 = 25 marks)

If you answer Question 2 put a cross in the box .

2 Coastal environments

(a) Identify the erosional landform. (1)

- A beach
- B cave
- C sea wall
- D spit

(b) (i) Identify the best definition of a sand bar found on a coast. (1)

- A outcrop of chalk and limestone in a bay
- B a spit that has continued to grow across a bay
- C a spit that ends in a rock arch
- D a platform formed by waves eroding a cliff

(ii) State **one** factor that encourages salt marsh ecosystems to develop. (1)

(c) Explain **one** way mangrove ecosystems are affected by human activity. (2)

.....

.....

.....

.....

.....

(d) Study Figure 2a in the Resource Booklet.

Explain **two** reasons why there may be conflict over the use of coral reef ecosystems.

(4)

1

.....

.....

.....

2

.....

.....

.....

(e) Explain the difference between constructive and destructive waves.

(3)

If you answer Question 3 put a cross in the box .

3 Hazardous environments

(a) Identify a feature of a tropical cyclone.

(1)

- A** crater
- B** constructive
- C** eye
- D** mantle

(b) (i) Identify the best definition of an earthquake epicentre.

(1)

- A** point on the earth's surface where tectonic plates meet
- B** point in the earth's crust that collapses
- C** point in the earth's crust where lava escapes
- D** point on the earth's surface directly above the focus

(ii) State **one** factor that can affect how much damage an earthquake can cause.

(1)

(c) Explain **one** factor that affects the distribution of tropical cyclones.

(2)

SECTION B

Answer ONE question from this section.

If you answer Question 4 put a cross in the box .

4 Investigating river environments

A group of students have undertaken an enquiry that explores how sediment changes along a river at two sites.

(a) Study Figure 4a in the Resource Booklet.

(i) Identify **one** type of quantitative data used by the students.

(1)

- A** annotated photographs
- B** newspaper articles
- C** amount of rainfall
- D** river management plan

(ii) State **one** way maps could be used to support the enquiry.

(1)

(b) Study Figure 4b which shows some data collected about river velocity.

(i) Calculate the mean velocity.

Give your answer to one decimal place.

You must show all your workings in the space below.

(2)

..... m/s

(ii) State **one** piece of equipment that could be used to measure river velocity.

(1)

(c) (i) Complete Figure 4d below, using data highlighted in Figure 4c in the Resource Booklet.

(2)

Key

Very angular

Angular

Sub-angular

Sub-rounded

Rounded

Very rounded

Figure 4d

Pie chart showing pebble shape

(ii) Identify **two** ways the students could have improved the reliability of the data collected.

(2)

1

2

(d) Explain **one other** fieldwork technique the students could have used to explore river channel changes.

If you answer Question 5 put a cross in the box .

5 Investigating coastal environments

A group of students have undertaken an enquiry that explores the impact of coastal management at two sites.

(a) Study Figure 5a in the Resource Booklet.

(i) Identify **one** type of quantitative data used by the students. (1)

- A** annotated photographs
- B** newspaper articles
- C** beach gradient
- D** coastal management plan

(ii) State **one** way maps could be used to support the enquiry. (1)

.....

.....

(b) Study Figure 5b which shows some data about beach sediment.

(i) Calculate the mean size of the pebbles in centimetres.

Give your answer to one decimal place.

You must show all your workings in the space below.

(2)

..... cm

(ii) State **one** piece of equipment that could be used to measure the pebbles. (1)

If you answer Question 6 put a cross in the box .

6 Investigating hazardous environments

A group of students have undertaken an enquiry that explores local views on the importance of preparing for tropical cyclones at two sites.

(a) Study Figure 6a in the Resource Booklet.

(i) Identify **one** type of quantitative data used by the students.

(1)

- A annotated photographs
- B newspaper articles
- C amount of rainfall
- D interviews with local people

(ii) State **one** way maps could be used to support the enquiry.

(1)

(b) Study Figure 6b which shows some data about rainfall over 5 days during a tropical cyclone event.

(i) Calculate the mean rainfall.

Give your answer to one decimal place.

You must show all your workings in the space below.

(2)

..... mm

(ii) State **one** piece of equipment that could be used to measure rainfall.

(1)

- (c) (i) Complete Figure 6d below, using data highlighted in Figure 6c in the Resource Booklet.

(2)

Figure 6d

Pie chart showing views on preparation for tropical cyclones

- (ii) Identify **two** ways the students could have improved the reliability of the data collected.

Q:1/1/1/1/1

Pearson

Figure 1a

Human activity in a drainage basin

Figure 1b

Mass movement along Naches river valley in the USA

Key

- Urban area
- X Hydrograph gauging station
- Watershed
- X Forested land
- X Pastoral farming

Note: A hydrograph gauging station is where river discharge is measured.

Figure 1c
Information about a drainage basin

The value of coral reefs

Coral reefs have a value of \$9.9 trillion USD globally and are relied upon by at least 500 million people.

Medicine

More than half of all new cancer drug research focuses on marine organisms.

Biodiversity

Though many are sensitive to pressure from tourist divers and the fishing industry.

Coastal protection

Coral reefs reduce wave energy by 97% before hitting the shore.

Tourism

70 million trips are supported by coral reefs annually.

Food production

Overfishing leads to reduced fish stocks for local fishermen.

Figure 2a

Information on uses of coral reefs

Key

-  Beach
-  Sea

Figure 2b
Coastal transportation process

Hard engineering: rock groyne in Espinho

Soft engineering: area of beach replenishment north of Espinho

Coastal management type

Key

-  Hard engineering: groynes and sea walls
-  Soft engineering: beach replenishment
-  Soft engineering: beach replenishment and sand dune

Figure 2c

Information about a coastal management plan on a coastline in Portugal

Determine your risk
Hurricanes bring many hazards to USA coastlines and inland areas, including storm surge along the coast, inland flooding due to heavy rainfall, tornadoes, strong wind, rip currents and large waves.

Complete a written plan
Writing down your plan will help you avoid mistakes when faced with an emergency and ensure everyone in your home is prepared for the next storm.

- Share your plan
- Keep your important documents together for quick access
- Have photo documentation of valuables

Note: Hurricanes are a type of tropical cyclone

Figure 3a

Information for people living in areas at risk of tropical cyclones in the USA

Figure 3b

Port au Prince, Haiti, after the 2010 earthquake

Eruption	Information
<p data-bbox="363 226 707 293">Anak Krakatau, Indonesia 2018</p> 	<ul data-bbox="896 353 1366 719" style="list-style-type: none"> • Triggered a tsunami. • 14,059 people injured. • 429 deaths. • Destroyed 2,752 houses and 510 ships. • Eruption reduced the volcano's height from 338 to 100m.
<p data-bbox="341 864 729 931">Volcán de Fuego, Guatemala 2018</p> 	<ul data-bbox="896 969 1374 1335" style="list-style-type: none"> • 190 deaths. • 4,000 people evacuated. • Pyroclastic flows hit several towns and villages and blocked transport routes. • Ash reached the capital, Guatemala City, and closed the international airport.

Figure 3c

Information on two volcanic eruptions

- Annotated photographs
- Newspaper articles
- Amount of rainfall
- River velocity
- River width
- River management plan

Figure 4a

Selected data collection methods

Measurement	River velocity (m/s)
1	1.2
2	2.0
3	1.4
4	1.2
5	1.0

Figure 4b

Data on river velocity at Site 2 (of 2)

	Pebble shape	Percentage (%)
